M: Ed and Ber, the well-known pubsie i as setter a volume on the "Architectus I Ascient Egypt," which will be published by I is farm, Messrs, G. Bell and Sons, Limited Y & House, Portugal Street, Kingsway, Leiden, W.C., next week. The main way. Let den. W.C., next week. The main best of this value is to give, in a manner alapted to general renders, a connected his terical outline of the architecture of the against Egyptians, from their earliest dynastic period; and to show in the light of recent research to what extent it forms a place in the general history of the art. Some prace if the general ingoly of the art. Some or art is also given of the later periods, to which is charge a proportion of the existing remains are due. About 180 illustrations, maps, and plans will, it is hoped, give the be a some interest to travellers, as a supplement, so far as the chief architectural monuments are concerned, to the undispensable

The hand Steel Instante at the autumn meeting had on Thursday at the Instant on of Civil Enginers, dealt without hesitat a with the problem of alien members. Subject to confirmation at the annual meeting in May next, a new rule was adopted providing that in the event of a state of existing between this and any other country, all members, honorary members, and how new vice-presidents who are subjects of such enemy country shall rease to be members, but shall be eligible for election after the war. Another rule adopted gave the council alsolute authority to occure the bary member from the list of mem-

Statt\_at, which was treated by French aviators to a visit on Wednesday morning last, is pleasantly situated in the little valley of the Neschaela about a couple of niles above the confluence of that stream with the Neckar. The palace which was bombarded was begun in 1746, but was not completed until 1895, when the status of the Grand Duke of Wurtemberg was raised by Napoleon to that of King. It is a dull Baroque edifice of free-tone with two projecting wings meshane I on plan, of three stories and an attic. the central grand entrance being surmounted by a high gilt crown. The palace contains by a high gift crown. The palace contains 565 apa timents. The large square in front is planted with trees, and contains two circular functions, and in the centre a tall round Counthran column of white stone surmounted by a waged figure of Victory. On the opposite side of this square, facing the palace. but in the Schloss-strasse, is the great railway station, which also received attention from the French airmen.

In recent years not a few picturesque and arcent bits of Haddington have disappeared before the march of improvement, and one of the most interesting is now in process of demilition in the removal of the old Skinners' Close in Hardgate. The buildings, constituting what was a most picture-que close of tiled roofs and hard d walls, stretched from Hardgate to the River Tyne. They were full of grains interiors, who low roofs and walls. apparently clustered together on the principle a puzzle for later days of advanced public health ideas. In their time they had served many purposes. Within the memory of old inhabitants they were occupied as an old history known far and near as the "White The sign was doubtless drawn from Tyne swans, a supposition which is out by the following quant couplet which embellished the house: "As swans do blie the water clear. Step in here and drink which embed, here the make the water clear, Step in here and drink 2 od heer." Many a povial burghal and other gathering was held in the old premises. The locality obtained the name of the Samers' Close through being connected with with where skinners were long employed. Latterly the place had been in use for lodging are numeries and dwellings of a poor and was largely in a tumble down condition. The Berkenhead Corporation's scheme for

ere the working-class houses and flats on the Calbrook estate, at the north-end of the

that the sum proposed to be borrowed in conmeetian with the scheme was £08,500, and under the Housing Act there had already been expended £50,000. The desire of the conneil to proceed with a more comprehensive scheme than any lutherto undertaken had been intensified in recent years owing to the falling off of private building which followed the passing of the Finance Act and to the rapidly increasing industrial population due to a large accession of work in connection with Messis. Cammell, Laird's, which was the principal labour employing firm in the borough. There was no doubt that even before the beginning of the war the supply of small houses fell considerably short of the demand, and this position had been accentuated within the last twelve months. The corporation at the same time had in mind that to some extent the accession of popula-tion might be temporary. The site intended to be used for the housing scheme was a portion of the unsold land on the Gilbrook estate, acquired in 1845, consisting of nearly eight acres, including street sites. In May, 1914, the Health Committee formulated a scheme for erecting 200 houses at the north end, 100 houses in a central area, and 100 at the south end. The present scheme was the first instalment of that proposal. Plans for the houses to be erected on the Gilbrook site were prepared by Mr. T. Taleisin Rees. Dr. Sydney Marsden, medical officer of health, spoke of the necessity of providing a large number of working-class dwellings in the borough, and observed that 80 houses had been demolished at the north end. Mr. T. T. Rees, F.R.I.B.A., of Birkenhead, gave details of the scheme. No opposition was offered to the application.

The Committee on Ancient Earthworks and Fortified Enclosures, in connection with the Congress of Archaeological Societies, in their annual report state that, in regard to the entrenching, hutting, and other work going on all over the country, no complaints have been received of damage or destruction of ancient earthworks by those engaged in con-structing modern ones. That the soldiers structing modern ones. That the soldiers were alive to the possibilities of their work was shown amusingly by some North Country officers employed in the Midlands, who carved and set up epigraphic records of their trenchands of their trenchanges. ing in imitation of Roman inscriptions. The war has caused the suspension of archieological work in many parts of the country The committee express their regret that Balsham (or Heam) Dyke and the Devil's Dyke, n Cambridgeshire, are still being used as chalk quarries, and that the destruction of hill fortress of Penmaenmawr conthe great timies. Bossuce, the only carthwork in West Cornwall, which has yielded an appreciable quantity of Roman remains, and many other quantity of romain remains, and many other earthworks in the county, are suffering gradual destruction through ploughing, and the destruction of Lee Hill Camp, a loose rampart in Yorkshire, continues by stones being carted away.

In recording an orlination service by the Bishop of Birmingham in St. James's Courch, Ashsted, a correspondent of the Guardian writes:—"A hundred and twenty years ago Ashsted was a pleasant suburb of Birmingham, in which the wealthiest citizens lived. nam, in which the weatthest cutzens fixed, and among them a notable physician, Dr John Ash. He can claim the gratitude of generations of Birmingham people, as having been the main cause of the founding of the General Hospital. On his death his large private house was turned into a church of the best of the foundation. The whole of the interior was removed, some new windows were inserted, galleries were built, and the result was an ugly, but useful, building that scated some thirteen hun Ired people. There have been two fairly thorough restorations since its adaptation to the purposes of worship, and now there are hardly any marks left of its origin, apart from a few windows which show unmistak-able signs of the dwelling-house"

"The Practical Design of Steel framed Sheds," by Albert S. Spencer (London: Constable and Co., Limited, 10s. 6d. net), is a Stable and Co., Limited, 10s. 6d. net), is a fortunate recovery of these working disable. The Hall on Tuesday evening in useful addition to the by no means scanty made it possible to set about the correct made it possible to set about the correct restoration of the interior and to replace the

Chitton, M.Inst.C.E., an inspector of the Local recognise that mere proficiency in the design Government Board. The Town Clerk stated of the various units is not unseldom gained at the sacrifice of due regard to the units as a whole. It is entirely true, as the author says, that the had effect of the contrary is visible in present drawing-office practice, and we hope his book will recall the advisability of preparing more coherent and consistent drawings, and the payment of more atten-tion to the stability of the structure as a whole. Mr. Spencer has also our sympathy with his attempt to offer a rational solution of the difficulty of providing fixity for stanchion bases, which, with reasonable care, may be safely adopted, and which, in our judgment, is far better than ignoring the problem, as most of the text-books do, or suggesting solutions which, on the face of them, are commercially impracticable.

The ninety-third report of the Commissioners of Woods, Forests, and Land Revenues has been issued, and states that, exclusive of land let for building purposes, the Crown property under their charge extends to 346,935 acres, of which 69.103 acres are under the growth of timber. The income amounted to £727,350, and the expenditure to £192,157, the corresponding figures for the previous year being £730,319 and £186,660. The area of agricultural lands under the Commissioners at the end of March last was 73.375 acres, an increase of 860 acres, attributable to the purchase of the Dymock Estate in Gloucester-shire and of estates in Lincolnshire. The area converted by the Crown into small holdings within the year was 584 acres, bringing the area so converted since the policy of encouraging the creation of small holdings and contaging the creation of small hottings and allotments on Crown land was inaugurated nine years ago up to 7,827 acres. During these nine years there have been erected on these 7,827 acres 87 new cottages and 70 new sets of farm buildings; 43 cottages have sets of farm buildings; 43 cottages have been substantially altered and improved, and the homesteads and buildings which were on the nomesteaus and bundings which were on the farms divided into small holdings have been remodelled to fit them for the use of 92 smallholders. In order to meet urgent requirements of the military authorities large quantities of fuelwood for the Expeditionary orce in France and Flanders were supplied from New Forest and the Wood Distillation Works, Dean Forest, and a small quantity from Tintern Woods. Charcoal burning was carried on in New Forest, Bere, Parkhurst, and Alice Holt Woods, Dean Forest, and Highmeadow, and Tintern Woods, and large quantities of charcoal supplied for use in the trenches. Increased quantities of pit timber have been sold from Dean Forest and Tintern nave been sold from Dean Forest and Tintern Woods. It is intended to use Dean Forest, about 18,700 acres, and the Highmeadow, Abhotswood, and Clearwell Woodlands, as a forestry demonstration area. A school for forest students and an office for the deputy surveyor and director, Mr. L. S. Osmaston, are being erected, and the school for woodmen students at Parkend has been extended.

French Artists and the War is the subject of one of the opening exhibitions of the the Leicester Galleries, autumn season at the Leicester Galleries, Leicester Square. Among those contributing appear such famous names as Forain, Steinlen, Leandre, Hermann-Paul, and Willette; but perhaus the most novel feature will be a number of sketches sent direct from the front by artists now serving in the trenches. This exhibition will open on October 2, and on the same date a series of fifty war cartoons, entitled "The Kaiser's Garland," by Mr. Edmund J. Sullivan, will be shown in these

In 1908 there were discovered in the archives of the New York Historical Society the original drawings by John McComb from which the New York City Hall was erected. While the exterior of this retable building has withstood the hand of vandals in all of the more important features, the interior has not been so fortunate, says the American Architect. Every passing a lministration had, up to recent years, worked its will until little. was left of the finely designed if anything. interior detail that was as correct in its essential qualities as is that of the exterior. fortunate recovery of these working drawings garish and peorly executed work that had found ledgment there with an exact replica of the original. Through the generosity and public spirit of Mrs. Russell Sage, funds were provided some three years ago for a complete restoration of the Governor's Room on the second floor. This work was executed, under the direction of Mr. Grosvenor Atterbury, and completely fulfilled the expectations of those who had the project in charge. A second in stalment of restoration, also under the direct tion of Mr. Atterbury, has just been finished. Under the supervision of the Municipal Art Commission there has been going forward for some time a complete overhauling of the City Hall, with the intention to restore it, as far as possible, to its original state. The Mayor's office, reception room, and that part in the easterly wing on the first floor has been completed.

At the meeting on Saturday of Bettwsy coed Urban District Council a letter was read from Private W. O. Hughes, the sanitary inspector, who recently joined the Army, applying that half his salary as the inspector be paid during the war, council's as he had to keep a widowed mother. Mr. Faichney: We made him an offer of \$10 per annum during the war, but he refused it and left without any arrangement being arrived at. The Chairman: We have thousands of men in the trenches, in France and the Dardanelles who are fighting for their country without any other remunera-tion than their wages as soldiers. Why should Hughes be paid more than the others. The times are too hard to pay for nothing. It was decided to repeat the offer of £10 per annum during the war.

In the Journal of the Royal Institute of British Architects there is published this week a sixteenth list of members, licentiates and students who have joined H.M. norces for the period of war, the total to date being 45 Fellows, 334 Associates, 165 Licen-tiates, and 212 Students. There are also given the following particulars of architects who have been wounded:

Albert E. Kirk, F.R.I.B.A., lieutenant-colonel commanding 7th Bn. West Yorks Regiment. Wounded in the trenches in France on August 28. In hospital in London

and progressing favourably.

Cecil Grellier, student, 2nd Lieut, 10th Bn. Hampshire Regiment. Wounded in Gallipoli on August 10. In hospital at Alexandria and progressing favourably.

Basil White Ridley, student, Captain, 7th South Lancashire Regiment. Wounded in the trenches in Flanders on September 3. Now in England and going on well.

Geoffrey William Ridley, A.R.I.B.A.. Lieut., 4th Royal Sussex Regiment (brother of Capt. B. W. Ridley above mentioned). Wounded in the Dardanelles on August 15 and sent home. Recovering, and hopes to return to the front very shortly.

Robert William Pite, student, Lance Corp., R.E. (son of Mr. W. A. Pite F.R.I.B.A.). Seriously wounded in Galli poli on August 7. In hospital at Cairo.

Sub-Lieutenant Aldersey Ducken, L.R.I.B.A., f the R.N.V.R. Drake Battalion, died on the 12th inst. while on service.

A picture house is to be built at the corner of Caledonian Street and Dumbarton Road. Dalmuir, from plans by Mr. William Inglis, irchitect, West George Street, Glasgow.

Mr. Arthur Race, borough engineer and surveyor, Barrow-in-Furness, has been appointed to a similar post at Blackburn at a salary of £800 a year, in succession to Mr. W. Stubbs, retired. There were fifty applicants for the post.

The work begun in 1913 for the electrifica-ion of the London and South-Western Rail-ay suburban lines within fifteen miles of way suburban lines within fifteen miles of Waterloo Station is nearly completed, and the section from Waterloo, via Southfields, to Wimbledon, and thence by the circular route through Kingston and Richmond to East Putney, will be ready for traffic in two or three vetes. The Shepperton section will be opcued to the same time. Those will be followed by the Hounslow loop line and the Hampton Pourt and Claygate branches. The length of hese routes is about forty-seven miles.

### 10 CORRESPONDENTS.

We do not hold ourselves responsible for the opinions of our correspondent. All communications should be drawn up as briefly as possible, as there are many claimants upon the space allotted to correspondents.

correspondents.

It is particularly requested that all drawings and all communications respecting illustrations or iterary matter, books for review, etc., should be addressed to the Editor of the BUIDING NEWS, Ellimphan House, I. Arundel Street, Strand, W.C., and not to members of the stall by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' risks, and the Editor will not undertake to pay for, or be hable for, unsought contributions.

for, unsought contributions.

""" Prawings of selected competition designs, im portant public and private buildings, details of old and new work, and good sketches are always well come, and for such no charge is made for insertion off more commonplace subjects, small churches chapels, houses, etc. we have usually far more sent than we can insert, but are glad to do so when space permits, on mutually advantageous terms, which may be ascertained on application.

When favouring us with drawness or photographs,

When favouring us with drawings or photographs, architects are asked kindly to state how long the huilding has been creeted. It does neither them nor us much good to illustrate buildings which have been some time executed, except under special circumstances. stances.

Special attention of members is drawn to the fact that correspondence should be answered by return. If this is not attended to the other work of the Corps is immensely increased. Enrollment terms of new members and all correspondence not referring to recruiting for the Army to linancial matters must be addressed to the Adjutant, ?1. Condint street, W., and regarding recruiting for the Army to the Recruiting Officer at Battaleon He adjutantify, and legarding seconds and subscriptions to the Pay mister, W. Bughes, 146, Bashwood Bouse, E.C.
By Orler,
L. R. GUTHRIE, Adjutant.

### MEETINGS FOR THE ENSUING WEEK

THERSBAY Royal Photographic Society's LVab-tion "Good estar Cathedral," by Henry W. bennett. Suffolk Steet Gallery, Haymarket, SW 8 30 p.m. 

A mission hall is about to be built in Blacts avon in connection with St. Paul's Crawl from plans by Mr. G. A. Treberto, of A ser

Since the passing of the Edm ation Act, 1 79, a sum of £1,008,349 13s 1d, has been experited in providing school accommodation and epupment in Leeds.

ment in Leeds.

The North-Eastern Railway directors have decided not to appoint a dicks engineer in succession to the late Mr. Charles Watson at present. Mr. Charles F. Bengough, the chief engineer of the company, will for the time being take charge of the dock engineering work, in addition to his own work.

b. P. F.- Lattle demand just now

## THE PLYMOUTH MUTUAL CO-OPERATIVE AND INDUSTRIAL SOCIETY COMPETITION

Obitnary

Although doubtless the designing of a large block of buildings for commercial purposes has not the same fascination for the architect as public undertakings which call for a more monumental treatment, such as municipal buildings or museums and art galleries, yet there are nevertheless many interesting problems to be encountered, some of them still awaiting a thoroughly satisfactory solution, in grappling with the design of commercial premises such as the Plymouth Mutual Co-operative and Industrial Society are now proposing to erect. It is interesting to note, by the bye, that the committee of the society, whilst committed to the principles of co-operation as regards their own trading, did not scruple to adopt those of competition for the design of their new buildings, and it may be admitted at once, as some at least of the drawings show, that this departure was fully justified. Possibly the modest deposit of five shillings required for the conditions was responsible for the fact that many able architects, who would otherwise certainly have sent in designs, refrained from doing so, under the erroneous impression that the magnitude of the work was on a level with the amount of this deposit.

The necessity for the maximum of show or window space for the display of goods, and the minimum of ground-floor piers in order to give little more than a bare pretence of support, dictated a treatment on the upper floors which should not appear unduly solid and overweighty. As a consequence it was a foregone conclusion that competitors would develop in many cases a columnar treatment, now so much in vogue for big emporiums. The present competi-tion has, however, brought forth a great variety of styles, varying from Early Georgian down to the most advanced forms of Neo-Gree, whilst there are also examples of the usual nondescript Picture Palace or Twelfth Cake styles, which every competition brings forth, quite irrespective of the character of the building r.quired. With regard to the planning involved, a reference to the block plan will show that the competitors were faced by unusual difficulties in the shape of a right of way, and two properties at the corner cutting into the island, or rather peninsula, owned by the Society, which portion of the land they are unable to purchase at present. This necessarily made a connection between the north and south blocks very difficult. Competitors, however, had to bear in mind in their planning the possibility of these pro-perties being included at a later date, and

to allow provision for such a contingency. The assessor, Mr. Paul Waterhouse, M.A., F.R.I.B.A., in the conditions suggested a sloping cartway of I in 12 from Ruleigh Street West over the right of way into the basement of the building, to emble motors and vans to descend and circulate, thus providing a rendezvous for picking up directly from the stores of each department the goods for delivery. This proved a stumbling block to the competitors, many of whom apparently were unable to find a mean course between a cartway literally ranging all over the basement from Dan to Beersheba, or one so cramped that turns and repassings would be all but impossible, although in some cases the difficulty was well met. Another great stumbling block was the provision of a good area for adequate lighting and ventilation. This was clearly stipulated in the conditions, yet

SITE OF NEW CO OPERATIVE PREMISES, PLYMOUTH.

very few realised it properly in their prospective plans'. It is also rather difficult to understand why the r staurant floor should apparently have given such trouble in planning; but the fact remains that not many of the designs provided a good clear floor space, without angles or old shapes, possibly totalling the necessary area in the aggregate, but far less direct and simple for working than a plain refectory of the required size. The reports and estimates of the winning design and the three premiated schemes were not available, but in the majority of cases the latter varied between £80,000 and £90,000, being based on the stipulated figure of 1s. 1d. per

## THE SELICIED DESIGN.

Coming to the actual designs, the assessor has placed No 54, by Messrs, Halliday and Paters on, and C. Gustave Agate, AA.R.I.B.A., of 14, John Dalton Street, Manchester, first, and few will be found to

satisfactory solution of all the inflictities. The planning of the basement with its cartway admirably placed for enculation and loading, is both compact and practical, whilst the connection between the north and south blocks is made as much of as possible. The proximity of the cartway to the Courtenay Street pavement lights ensures proper lighting on that side, and whilst it is not clear from the plans as to how the extra-wide portion is intended to be lit, no doubt it could be arranged from the floor over. The stairs and lifts are all well placed, and the right of light of the Star Hall has been fully considered. The width of 35 ft adopted for the open area is adequate, and will admit full and ample light to all departments. Again, the restrurant floor is given a fine clear space, admirably lighted and ventilated, with kitchens, etc., all planned most conveniently close by, on the third floor. It should be remarked that the position was left to the option of competitors, who were at liberty to use the second floor if they wished, but in the event of the third floor being adopted, the space thus left on the second floor was to be frankly given over as unalletted. The treatment of the elevations, although simple and unpretentions, is thoroughly dignified and very satisfying. The great lines of the mansard roof, unbroken by dormers, all of which face on to the area. give a business-like and broad effect to the building, whils: the general distribution of the piers and columns is stately and well-considered. The advancing of the ground floor glass fronts 9 in. in front of the superincumbent masoury is claimed by the authors to provide a counterfoil to the appearance the buildings would otherwise present of being inadequately supported, so that the free is that of a screen in front of the to a sup-Altogether this design is no st suitable, and ought to wirk out in a very pleasing and appropriate manner

## THE £75 PREMIATED DESIGN

The first premium of £75 is availed design No. 57, by Mr. H. R. Garliner. Lie,R.I.B. A., of Leutherheid 1 is the scheme alternative plans are shown, and in one of them the strong way is contrived to enter from Releigh Street South. The planning generally is straight forward and satisfactory, with a good large area and excellent short m. The roof garden, however, is pined with the kitchen on the third floor above the residence. taurant, with the consequence that service is less simple than in the winning design. The lighting generally is go I, the direct air and light to the basement in the alterquestion the award. Taken all round, native scheme being distinctly a point, this design appears to provide the most. The elevation to Courtenay Street is plain and anoffensive, but those to Raleigh Street and branktort Street show an excess if glass and non-treatment which is uncalled for, and surely a judicious comparins introducing a little more mas may might have been adopted. This is, however, a well-thought-out scheme with many good points to recommend it.

### 1 RE 250 PREMIATED DESIGN

The main individuality which characterises design No. 10, by Mr. II S. East, of Gray's lun, awarded £50, is the radiation of the internal walls to tally with the converging lines of Raleigh Street and Frankfort Street. This is an arrangement which cann it be said to look well on paper and in view of the endless obliquities in volved, it certainly would not work out satisfactorily in practice. The departments, to a in some cases are rather badly cut up, notably the drapery and furnishing, but the restaurant is well managed on the second floor, with practically no waste space. The elevations show a continuous ground floor of plate glass with narrow metal uprights, devoid of a vestige of masonry and surmounted by a series of piers and arches running through two stories, filled in with iron wimlows. A cornice and brick blocking course over this is crowned by a two-story mansard roof-line thickly studded with dormers, suggesting that the building is divided into three distinct portions in a not overpleasing manner; but the elevations to the area have had much care and thought expended on them, and many other details have been very well considered.

## THE £25 PREMIATED DISTON.

Messrs, Frank Bethell, M.S.A., and C. M. Swannell, of Broad Street, London, have secured the third premium of £25, with design No. 27. These architects have approached the problem from quite a different standpoint, and provide a great circular staircase and light well, with areas on each side. The shops present ample opportunities for the display of goods, but there is a falling-off in the arrangement of the basement and stores, whilst the upper floors make doubtful solution of the problem. The elevations also are lacking in the restraint necessary for such a building; they do not not convey the "business idea embodied by the winner, the Neo-Gree on which their scheme is based, with a suspicion of Recess in its lines, being somewhat unpalarable.

Before passing on to a few of the other 92 designs submitted at may be remarked that many of the competitors appear to have lavished their best efforts on the Raleigh Street South elevation, apparently because the asses r, merely for convenience, suggested this front for the detail drawing. This was everrly on account of size only the important elevations, if either need emphasis, are these facing Frankfort Street and Courtenay Street,

With ref rence to the remaining designs, the nance of the connections were not dis-closed, and they can only be referred to under their distinguishing numbers; acress to them, mereover, was extremely difficult owing to the fact that they are at present hullful together in a small room. It is therefore no or than in bubble that some of the better sets could not be seen; but among the visible ones No. 12 stood out strongly with a very well worked out refined Classic treatment and a nicely designed green tile roof. The basement realway is well arranged, although possibly the lighting is not perfect. The restaurant floor is also excellently well disposed, and the elevations are of onit exceptional merit, the show

difficult to understand why this design was overlooked in making the awards, as it appears to be amply deserving of a pre-

Other designs which struck us as being worth more attention were Nos. 4, 2, 30, 25 (with a good double slope to counteract the trouble of vans meeting from different directions), 96 and 95; but in the absence of any information as to the authors' names, further criticism would be somewhat pointless, and impossible of identification by our readers. ---

" BUILDING NEWS " DESIGNING CLUB. AWARD OF PRIZES FOR SESSION 1914-1915.

The record of our Designing Club has been continuous since it was started forty years ago, and even during the present war time its work has proved an almost unqualified success. The numbers of our competitors naturally fell somewhat short of those of previous years, and, for obvious reasons, towards the close of the session 1914-5 competitors failed to reach the high level invariably maintained hitherto in normal times Business could not be "as usual with so many students, assistants, and young architects fighting for their country or gone on active service. But we are able to say that in spite of this depletion in numbers the standard of merit, which has all through our Club's career distinguished the designs submitted, has been upheld, for the contests month by month were each excellent and showing sustained effort against odds. Eight subjects were set in the following periodical sequence, and each subject was illustrated the order of the dates enumerated after the titles of the subjects, as printed in the following table:—October, 1914—A, "Gatefollowing table:—October, 1914—A, "Gate-house in a Street" (illustrated November 20, 1914). November, 1914—B, "A Small Market House" (December 18, 1914). Pecember, 1914—C, "Headquarters and Drill Hall for a Country Town" (January 22, 1914). January, 1915—D, "A Small Labour Exchange" (March 5, 1915). February—E, "A Co-operative Hostel for a Garden Suburb" (April 2, 1915). March—F, "A Small Social Club for Airmen and their Friends" (May 28, 1915). April—G, "Church Christ Scientist" (June 16, 1915). May—H, "A Garden Payilion and Boat-May—H. Garden Pavilion and Boat A house " (July 21, 1915).

In these competitions "September Morn"

submitted designs each time, and also always scored a place—twice first, four times second, and twice third—thus gaining "Walbroke" was once first to was once first, twice second. and three times third, scoring 20 marks, "Penwith" runs him closely by taking the first place twice, once second, and once third, giving a record of 18 marks. "Why" was twice first and twice fifth. "Bournemouth Queen "stood once second, once fourth, and once fifth. "Thistle" and "Kitch" both on one occasion, but their won " first place names do not occur again among the premier ranks. "Tonnelier" we thought would have ranks. 'Tonnelier'' we thought would not better, judging by his evidence ability, but somehow he only figures third once and fifth once. "Thistle" joined in one competition, and then he took the first isition, like a flash in the pan.

This tabulation decides the results, and

position.

is evident that the awards must stand as

First prize of £10 10s.; September lore—Mr. H. W. Smith, care of Mr. W. Allfrey, M.A., 57, High Street, Мот E. W. Or ford.

Second prize of £5 5s.: "Walbroke" Mr. W. Brooke, care of Messrs, B. Castle and Son, architects, London City and Mid-

uel Bruk Chambers, Cleckheaton, Yorks. Third prize of £3 3s.: "Penwith"—Mr Messrs. Cowell and J. Cark, care of Messrs, Cowell and Drewitt, architects, Lennard's Chambers, Penzance.

Hon, mention is awarded to "Why" and

Bournemonth Queen.

Cheques for prizes, after verification, will be forwarded about October 30. Any alteraspace be a comple, and the reants of support to the property of the prize with the prize with the addresses of the prize-winners of the prize-winners of the first prize feeling of security. It is rather one, meanwhile, to be sent to the Editor.

MONT S. MICHEL, THE ABBEY OF THE ARCHANGEL, AND ITS SEA-GIRT TOWN

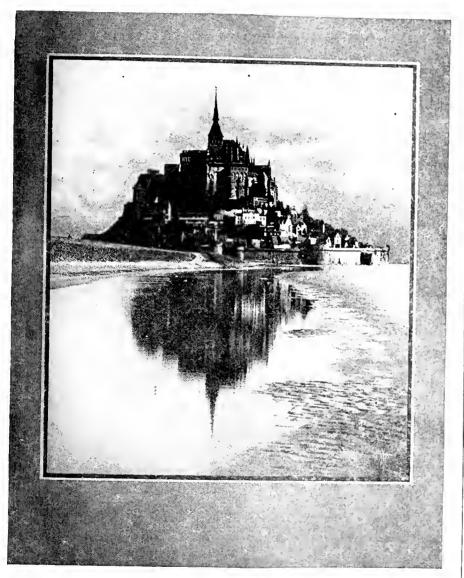

(Concluded from last week, p. 347.)

The eastern apse of the Crypt of the Great Pillars is deeply recessed, and has two windows with raised window seats. The door by the side leads down into a large hall which was the Justice Chamber of the abbot, but at present its fine timber roof is hidden by a flat ceiling put in when the Abbey was a prison, and the room is full of rubbish. On he north side of the rock, at about the same level as the substructures, is this fine crypt of the North Wind, as it is called. It was built by Abbot Roger II. soon after a great fire which destroyed much of the Abbey in 1112. It was used as the Almonry until the large one was built in the Marvel. The capitals and bases of the columns have a rugged simplicity and directness about them which is particularly charming, and at the further end you can see another mass of the original rock still left above the floor for no apparent reason. Much of the right hand wall in this crypt is the native rock cut to a flat face, against which the massive piers which carry the vaulting are built, and the stairs we see lead up to the room above, called The Promenade. This was the original cloister of the same date as the crypt below. Very different to any other cloister we know, this is but just one long gallery, with high windows looking away over the sea to the north. It consists of two aisles about 97 ft. in length. The columns originally supported a wooden roof which carried the floor of the dormitories above, and this graceful vaulting The caps was added about a century later. of the columns are carved with plain bold leaves, with the exception of one near the middle of the room. And on this one the carver-monk has done his best to perpetuate his idea of a twelfth century Mr. Nobody. And now we have arrived at the top of the great flight of steps to a platform level with the floor of the church. This platform, from which we can get a grand view southward, is called the Saut-Gualtier, or Walter's Leap. Walter was a young sculptor, who, in a fit of madness, threw himself down the rock from the parapet here. Here is the south door of the church at the western end of the nave. It is of the 13th Century, with a deeply moulded arch, the tympanum of which once held a carving of St. Michael slaying the dragon. Just round the corner is the great western platform, beneath which is the Chapel of Our Lady Underground. This west front of the church was built in 1776. The church had extended three bays more to the west, but they were taken down owing to their ruinous condition; and here, in what had been the floor of the western nave, were found the graves of two of the carlier abbots, one of whom, Robert de Torigni, did so much for the building of the Abbey. And here was buried that Duke Conan of Brittany who refused to do homage to Duke William, so that he, with Harold and his followers, set off to the Mount to munish him, with the result that many of his knights were lost in the quicksands, as we see portrayed in the Bayeux tapestry. Entering the west door we look along the whole length of the church to the east. The whole length of the church to the east. nave is now of four bays, three of which have the top of the rock immediately below the prevenent. This nave is very early in date, for it was begun by Abbot Hildebrand II. in the year 1023. The church is no longer used, and while it was part of the State prison it was robbed of its monuments. screens, and other decorations which we expect to find in every great church. So that as we stand in the chancel we see that we have only the bare walls and an uninter-rupted floor space. The great piers at the crossing which carry the tower were built in 1058. The nave was never vaulted in stone, and the present wooden waggon vaulted roof is of quite recent date. As we look along the nave areading it has quite a familiar appearance, being very similar to

By H. W. Fincham; a lecture, illustrated by 120 photographs by the author, delivered at the Exhibition of the Royal Photographic Society in the Suffolk Street Gallery, Haymarket, S.W., Sept. 28, 1915.

several of our Norman cathedral naves, but we must remember that it is nearly 100 years earlier than most of our great Norman churches. The piers, simple, with a great vaulting shaft running up the face of each to the roof. The triforium is small and heavy, and in the clerestory we have one simple round arched window in each bary. Up in the triforium we see how each bary is divided into two round arches with a central pier, and again subdivided with a little round column and simply carved caps. The south aisle of the nave looks quite home-like to an Englishman, and this picture would do almost equally well for the south aisle of Ely nave; the vaulting is almost identical, but instead of the great round columns we have here a square pier with a half-round

until hold that the choice was completed. It has a very noble effect with its bitty arches, and the line and many lines of the mouldings running right round the arches without an capitals such as we should find at home. The trajorium is not by any means a blind stay, and the clerestory is very high, and its vendows are as graceful as can be. This traphoto pacture shows us the capital of one of the great piers of the tower of 1053, and by its safe we see the beautiful detail of the traforum. Although the material is the hard granific used all over the building, this tracery is as finely wrought as if it had been cut in a fine soft stone. The choir aide runs entirely round the apset forming an ambulatory from which a number of little chapels open out. Here you see the

MONT S. MICHEL, FROM THE SOUTH (From a photograph by Mr. II, W. Finchain.)

shaft on each face. And all the time we must remember that this is about eighty years earlier than Ely Cathedral. On the right of this picture we have a little chaped on the east side of the south transept, which at one time held many relics of St. John the Evangelist; and then we look along the south aisle of the choir, with its vaulting of the latest period of Gothic architecture. The north transept is of the same style as the nave, but the window is of the 13th Century, and the circles in the head show that tentative feeling towards some means of lightening the upper part of the window the result of which we shall see in the beautiful Flamboyant windows of the choir. The old Romanesque choir fell down in 1421, and this present choir was a long time building. They had first to construct the Crypt of the Great Pillars below, and it was not

And all the time we this is about eighty Cathedral. On the very have a little chapel south transept, which relics of St. John the ve look along the south this vaulting of the beautiful bases of the piers very high, as we look along the south this vaulting of the beautiful bases of the piers very high, as we get them an our own Late Gothic, with the horizontal mouldings intersecting the bases of the same style as the is of the 13th Century, the head show that ards some means of the great piers of the choir. Against the middle pier we see a holy water stoup, not an after thought, but designed and built into the pier while the work was rising. In the little chapel we see the vaulting ribs dying into the wall without any of the vaulting ribs dying the wall without any of the vaulting ribs dying into the wall without any of the vaulting ribs dying into the wall without any of the vaulting ribs dying into the wall without any of the deorations of the church have disappeared, there are still left in one of the northern chapels two carved panels of Renaissance character.

They are carried to him to be They are current or more than the meaning soft as the of Carry and Fire been richly concerned. Almost the only other object left behind at the clearance is this boant ful rad across the entrance to the east chapel. across the entrance to the east chapel. It is very delicately carved in oak of Late Gothic or almost Renaissance character. The gates are very rich in carving with shie'ds of the see and some of the abbots. This great hell, which blocks up a large portion of the east chapel, was given to the church by Karg de Rebambourg, a German baron, whom Louis XIV, made abbot in 1703. It was specially used to guide the pilgrims and fishermen across the sands in foggy weather This telephotograph shows us the apex of the vaulting of the apse, the boss of which is carved with the Royal Arms of France, our rounded with the collar of the Saint Esprit; then we have a representation of St. Michael slaying the dragon; and the lower shield bears the arms of the Abbey, with the fleur de lis of France and the scallops of Brittany. We will now visit that grand building on the north side of the rock, which from its earliest time has been known as The Marvel, so wonderfully has it grown up from the rock, and such magnificent halls does it contain. It consists of three floors, each of which is divided into two halls. This western room of the bottom story is the cellar of the monastery, and dates about 1120; it has been called the Mentgomerie in memory of a dark deed that happened here in 1591. The Abbey was being besieged by the Huguen ts, under the Sieur de Montgomery. He had bribed an inmate of the Abbey to admit his soldiers by hauling them up to this room by means of a great wheel similar to the one I showed you just now, but which was used on this side to hand up water from the well of St. Aubert. On the night of the Feast of Michaelmas, when the monks were chanting their office, the besiegers crept up the face of the rock and were handed up in two and threes to this room. where they were quietly led within and stabbed to death Seventy eight of the Huguenots thus went to their doom, one only being kept alive, by name Rablotiere. At last Montgomery, hearing no noise of fighting above, became anxious, and cried out if all was we'l. The Governor led Rabbotiere to the wheel, and promised him freedom if he would entice the others up, but the brave man shouted down that they were betrayed, and the herror strickon Huguerots hurried away. It is pleasant to know that the Governor, touched to the heart by this the Covernor, touched to the heart by this splendid act, gave Rabiliters his life and freedom. The eastern ball is the Almoury: here the monks daily dispensed food and alms to near pilgrims. You see it is a fine violed hall of two aisles divided by well proper tioned columns, and, like the ollowing dates from the early part of the twift extury. Here the present day pilgrims well entire for the guides, and while away the families for the guides, and while away the families addressing pestends with they can buy it a counter at the end of the half. The second addressing pestanets we consider the second a counter at the end of the half. The second story is also divided into two, this cast the Guesten Half. The work story is also devided into two, it is eastern half being the Guesten Hall. The work is approximately of the last decade of the twelfth century, and is much in really and graceful than the halfs below. Unfortunately, at the time of my visit the half was being restored, and was filled with scaffold. ing. At one end of the hall me two enormous fireplaces side by side, which must have been very welcome to the guests arriving on a wintry day. This picturesque passage con-

Gosten Ha. aith the western since floor. This is known as Kinghis, for King Louis XI. This is known as of the Knights of St. . J. at I gave them this room as what It consists of four fire a dy ded by taken rows It consists of four finely s 13 and by taken lows of the S Habof the Knights one of the the halls in the world. On the corth as between the wind ws. are two corth as between the wind ws. are two corts means as which, filled with blazing as mess are looked very noble. See the graceta, to these of the vanlying and the farm a little shafts rising from the top of the great pyramida, chimney. The pictures to be abanted in this wonderful half are offess, and this one gives you an idea of the period for 1,2% ng effects one gets as the setting sin streams in at the western windows. Betwee the creation of the Knights of St Michael this hall was the Scriptorium, where the artist in iks worked at these gloriously illuminated missals and service books which were used in the churches, and which are now the prizes of the millionaire collector. Here in detail is one of the capitals of the columns. and when we remember that they are wrought in hard and claims grante, we wonder at the skill of the carver who produced so high graceful work in such a difficult material. On the north side are delightful balcomes, corbelled out from the wall, where the monks sould look out over the top of the little word and away out to Tombelaine and the open son. And now we have arrived at the top story of this marvellous building: the easter, half is this great hall, the Refectory, andming hall of the monks. It was not violed in stone as the others were, for there is a smooth above to carry, and vault there is a coverght above to carry, and vaulting would greatly increase the weight on that below. The lighting of the half is most brilliant, actionized its many windows, tall and narrow, are almost invisible, being placed on the outer face of the wall; here on the left is the pulpit, an important item in the Refectory. For here a monk read from the Lives of the Saints or some other holy book while his brathren direct. This was intended to prevent their to nights being led away to wildly things, but probably the drone of the reader only bejond to cover the inevitthe reader only he poel to cover the inevitable chatter of a large differ party. The Refectory opens immediately into the Constant, a crowning given on all the many wonders of the Mount, one of the most per feet and beautiful closters in the world. This really wenderful closter was built between the years 1220 and 1228. The argade easists of two parallel rows of columns and arches the healternate with or overlap each arenes to heliternate with or overlap each other, and are connected by diagonal ribs forming a triangular vauliting which is unique, and most beautiful in design. The cloister garth, it stoad of being of grass-grown earth, is a grante floor, covering the Hall of the Knights in molately below. This view of the north wark gives you some idea of the beaution for alternating areading which on the interest is a covered with the most defination of the alternating areading which on the interest is a covered with the most defination of the alternating areading which on the interest is a covered with the most defination of the local granite, for this areading is all carvoid in the soft and fine grained. Chen, is all carvoid in the soft and fine grained. Chen, is all carvoid in the soft and fine grained. Chen, is all carvoid helicate work. The to fine a simple barrel would in wood, doubtless for the need of keeping the masonry of this great helph as light as possible. This more wars helph as a new of small and simple one light windows set deeply in the thickness of the wall, which look away over the vast other, and are connected by diagonal ribs the wall, which look away over the vast expanse of sands and the open son. The outer valls are all digrante, and the or himouldings of the arcading open them are of singular death and bounty outs design the hardness of the material. The small door in the corner is that of the Chartria or Muniment Reson; it is now a little museum of interesting objects found about the Abbey, and contains beautiful vesticerts, rings, and half is from the graves of the earlier abbots In the south walk, against the wall of the hurch, are the layatories of the micks, and the square holes in the lower part were for the eremodal feet washing on Thursdays, and especially on H by Thursday, when the

abilist washed the feet of all the monks, and here he also washed the body of a deceased monk before its burial. In the west walk is and don't was intended for the Chapter He aser which I told you was contemplated on the west side of the Marvel, but never built. There are three very richly moulded collest and they would have made a most amposing entrance to a great Chapter House They are now filled with glass, and we can look down and wonder at the boldness of the one eption which proposed to carry up the mas any nearly 300 ft. from the base of the rock. Standing at the south east angle we sok along the areading at the charming offect of the alternating columns and the delightful vaulting ribs between them. The slymms and caps are of a kind of red marble called grantelle from a quarry on the main land near by, and were presented by the abbot of the old and celebrated Abbey of Luzerne, to whom the quarry belonged These columns and capitals are, as you see quite simple and plain, and so help to throw into great relief the beautiful work in the prindrels above. Every spandrel between the arches is most richly carved in the highest possible relief, and here opposite the Refec tony door was a crucifix, now much mutilated. but on either side is a beautiful mass of foliage. the nearest one is a lovely vine with vine tender in its midst. The cornice is filled by richly carved bosses or pateræ, every one different, and of most charming conception. Originally this wonderful carving was all richly painted and gilded, of which faint traces are still to be seen; but my own opinion is that we prefer to see the stone in its natural creamy-white colour. Opposite the door of the proposed Chapter House is a throned figure of Christ with censing angels. and up in the cornice are four little heads. where the carvers, in the prode of their work have commemorated their portraits, and in another part they have carved their names It is pleasant to think that they each under took the carving of a walk, and we can see how their striving to emulate each other resulted in this magnificent display of the very finest carving of the thirteenth century. These next three sides show still more of the varied and beautiful ornaments carved upon the spandrels, and the row of little rose like hosses ale ve. The relief is as high as possible, and the undercutting is so complete that one wonders how some of the petals stand against the wind that whistles through the Cloister, and yet here it is after nearly's ven centuries. Look in the cornice where the carver, tiring for a moment of regular shaped ornaments, has popped in that charming little owl, and in another place is a fine sea anemone with all its tentacles displayed and twisted into a circular pattern The outside roof covering of the Cl of glazed tiles in alternating bands of black and yellow, modern, but said to be a faithful of the original tiling. Above we see end of the north transept of the church and the great Romanesque tower. A tele-photo pature of the cast end of the church slows us the ferest of pinnacles which cap shows us the forest of punnacles which cap the buttresses of the apse, and the many flying buttresses which carry the weight of the vaulting over the roofs of the aisle channels to the outer walls. Standing on the roof of the chapels we can see at close quarters these graceful flying buttresses which rise above us in three stages; one of these at the top of the picture carries a little stair ase to the upper roof. Its charming open work trajeried parapets has given it the name of the Escalier Dentelle or Lace Stair as: I wish I could show you more of it but although I made several rather perilons climbs across the roofs to get a good view-point for the camera, I quite failed, and the best pictures of it were taken from a scaffold 12 some years ago. Another telephotograph shows us the detail of the graceful fleche or spire which caps the great tower; this is of wood covered with lead, and is all modern work, being completed in 1899 from the designs of the architect, M. Petitgrand from the Right on the summit stands this magnificent figure of St. Michael slaving the dragon. Nearly 14 ft. in height, it is made in beaten copper from the design of the eminent French

sculptor, M. Frémiet, and it stands 500 ft. above the level of the sands. And now on the highest ramparts let us look over the 100 square miles of the bay and watch the setting sun. The tide is low, and the river Couesnon, with the little streams of water running off the sands, make a wonderful pattern of curving lines, while the sun lights up the great expanse of the bay until the whole is like a blazing o al. An old custom was that no one was allowed to enter the church at night, as they believed that the angels met there and sing in the choir at midnight, while their effulgence illuminated the place. And one summer night as we strolled across the sands and saw the church standing out dimly against the midnight sky, we watched the long windows of the choir slowly lighting up until every pane was a blaze of brilliance, and one could almost 77.3.5 think they heard the angels singing. Of course, it was but the rising moon reflected on the glass, while the wind hummed across on the glass, while the wind hindined across the sand; but we could well understand how such a scene would appeal to the pilgrims trudging along in peril of the ever-changing quicksands.

And now that you have seen my pictures of this wonderful rock and the glorious Abbey of the Archangel. I think that you will agree with my quotation from Robert Louis Stevenson, that "mankind was never so happily inspired as when it built a cathedral," and that no more impressive site for such a building could be found as this little splinter of a rock in the midst of the great

TOWN PLANNING AT SALFORD.

Mr. George L. Pepler, representing the Local Government Board, sat at the Town Hall. Salford, on Wednesday last, to hear the application of the borough corporation for permission to put into power the Housing and Town Planning Act of 1909.

Mr. L. C. Evans, Town Clerk, appeared for the corporation, and the scheme was strongly opposed on behalf of the Manchester Ship Canal Company, the Trustees of Booth's Charity, the Lancashire and Yorkshire Railway Company, and various landowners.

Mr Evans said that the corporation were anxious to put the town-planning scheme into operation, and the land they proposed to include covered about 2.290 acres. It was situated in various parts of the borough, and was all land likely to be developed.

Mr. F. W. Platt, building surveyor to the corporation, in support of the application, said that had the Salford Corporation had the powers they now possessed forty years ago, Salford would have been a very different place. Apart from secondary streets, the main thoroughfares would have been made much wider and the people would have enjoyed three times the breathing-space they had to-day. Mr. Platt explained that since the opening of the Ship Canal there had been a considerable growth in the huilding of property, especially warehouses and workshops, and when normal times were reached again a much bigger growth was anticipate. On the Crescent area, where property belonging to the Booth's Charity was situated, there were some thirty-four different owners, and for uniformity alone it was necessary that the corporation should enjoy the powers given by the Act. This was once a residential district, but in course of time it would the all occupied by warehouses. In the north the development would be of a residential character.

The borough engineer, Mr. E. B. Martin, said the corporation was most anxious to assist landowners, and no obstacle would be put in the way of developing any of the plots. In other towns, he had found that owners had benefited considerably by the provisions of the Act.

For the opposition, Mr. Wallis, land agent and valuer to the Ship Canal Company, contended that the land belonging to the company, and shown on the plan, was already developed. The Canal Company had powers of their own, which he contended ought not to be interfered with.

# THE BRITISH FIRE PREVENTION COM MITTEE'S FIRE WARNINGS.

We have from time to time called attention to the various "fire warnings" that have been issued by this committee in connection with the war emergency, but it does not seem to be generally understood that not seem to be generally understood that they can be obtained gratuitously within reasonable limits, nor are the various types of "warnings" available apparently known as well as they should be.

The "fire warnings" obtainable in poster form, printed in red, 8 in. wide, are as follows, and the reference number, which

follows, and the reference number must be given in all communications regarding them:

For military and auxiliary military hospitals (No. 10

For private hospitals, convalescent homes and hostels (No. 11).

For hospitals taking Belgian wounded: in French (No. 11a), in Flemish (No. 11b).

For Indian hospitals and depots: in Pun-

jabi (No. 11c), in Urdu (No. 11d).

For refugee hostels (No. 12): in French (No. 12a), in Flemish (No. 12b).

For farmers (No. 14)

For troops billeted (No. 15).
For works and factories engaged on

Government orders (No. 16). For elementary and secondary schools, reair raids (No. 20).

For public schools and boarding schools, re air raids (No. 20a).

Re fires due to air raids (No. 17), for hous?

holders, etc

Re fires due to air raids (No. 17a), as to

the fires due to air raids (No. 11a), as to dealing with incendiary bombs, etc.

All Government departments and military authorities receive the supplies of the "warnings" free.

Supplies of any "warning" are issued free to police forces upon the written request of the chief constable. Applications from constables or special constables connected with such forces cannot be considered. with such forces cannot be considered.

A suitable number of copies of "warnings" No. 10, 11, 11a-11d, or 17a are obtainable free from the British Fire Prevention Committee by officers, doctors, or matrous of naval, military, auxiliary military, Red Gross, or St. John hospitals and civil hospitals or convalescent homes taking militar; patients, upon writter application addressed to the registrar at 8, Waterloo Place, London, S.W., giving the full name of the institution, the number of beds contained, and the postal address.

Local authorities and school or refugee committees—as also the clergy and head-masters or headmistresses—requiring "warn-ings" No. 20 and 20a (for schools) or Nos. 12, 12a, and 12b (for refugees) will receive a suitable number of copies free upon written as a statement in the registrar, giving the full name and postal address of the institution for which they are required, the number of pupils or refugees, subject to their enclosing a large-sized, addressed, and properly stamped envelope for despatching the necessary posters.

Factory owners, estate owners, farmers, shopkeepers, and householders requiring copies of the British Fire Prevention Committee's "warnings" must similarly enclose large-sized stamped and addressed controlled the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the velopes for reply, but only receive a strictly limited number. Their communications can not be attended to unless the return stamped and addressed envelope is provided, and in any case they are only dealt with in rota-tion of application after the requirements of

the authorities have been met.

All communications as to "warnings" should be in writing addressed to the registrar, the British Fire Prevention Committee, 8, Waterloo Place, London, S.W., and not by caller or telephone. Over a quarter of a million posters have already been quarter of a million posters have already been issued by the committee gratuitously.

## FIRES DUE TO AIR RAIDS

Don't wait until a fire occurs to find the best way out in the dark. Think of a way out beforehand.

Buckets of water (supplemented where feasible by ordinary hand pumps) are recomfeasible by ordinary hand pumps) are recommended as the most suitable and economical fire appliances, and, where oil or spirit is a metal handle at the apex (see A).

used, also some onckets of sand. All buckets should be kept fided ready for use.

Pitchers and other minor household vessels should be kept filled ready for use, and where there are baths, wash tubs, etc., these should be kept filled so that a supply of water may be available independently of the water mains. Where there are garden utensils, such as syringes, garden pumps, etc., they should readily accessible

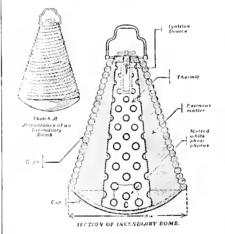

On no account should money be expended on powder extinguishers (tubes), glass hand grenades, or similar types of minor fire apphances at present being hawked about, and if previded they should not be relied upon.

Squirts or extinguishers containing carbon tetrachloride or similar chemicals, which are liable to form noxions gases, are unsuitable.

porcable liquid chemical guishers are desired, they should be of two or three-gallon capacity, and a written warranty should be obtained that they comply either with the specifications of the Board of Trade, H.M. Office of Works, the Metro-politan Police, or of this Committee, these specifications being mainly intended to prevent accidents from bursting

Occupants should know how to use the available fire appliances efficiently.

Ascertain the quickest means of obtaining assistance from the fire brigade and police: post up the necessary particulars, nearest fire alarm, etc., on the ground floor, and do not

fail to notify any outbreak of fire imme-

The ordinary explosive bombs employed by the enemy rarely cause a fire per se, but where a building is injured or collapses, fires are frequently caused by open lights or fires, etc., and their spread is assisted by escaping gas from broken mains or arcs from broken lectric cables.

Fires thus caused indirectly by explosive bombs can, as a rule, be dealt with as ordinary fires in their incipient stage. Any gas or electrical supply not cut off prior to the outbreak should, if possible, however, be cut

off at the earliest possible moment.

The incendiary bombs employed by the enemy readily fire buildings and their con tents owing to the fierce nature of the flames and the molten metal generated by the chemicals used

Fires caused by incendiary bombs may be prevented from spreaching, r gardless of the high temperature generated at the actual seat of the outbreak, if water be promptly applied in fair bulk, force and continuity, say, from a series of buckets energetically thrown, or hand pumps vigorously worked Sand or loose soil similarly thrown might be useful in the absence of water, lost would not have the necessary cooling effect. The application of single buckets of water, single shovels of sand, etc., would be comparatively valuables. valueless, a concentration of the available liquid first aid appliances being required to obtain the necessary result.

In order to deal with fires from incendiary bombs, their make should be understood, and the following describes one of the types frequently used .--

Hat cup, on pierced metal tunnel is fitted have going ign ion desice and handle fitted at the top-

The funnel is generally filled with Thermit which, up on guitton, generates interse heat and by the '.m' of the concussion has taked the form of mosten metal of the extra e line, high temperature of over 5306. Fair. T molten metal is spread by the concussion

Outside the funner is a paliding of a highly inflammable or residens material bound with an inflammable form of rope. It residens material creates a pungont smoke

There is generally some melted white phos phorous in the bottom of the cup which deve lops nauseous fumes (see C). In some case: celluloid chippings are added and occasionally a small quantity of petrol. The fumes from bombs are generally paid

gent. When poison gas is used it is often irritating and has a peculiar smell. A simple form of respirator that will cover the nose as well as the mouth, and can be readily damped, should be kept handy. Such a respirator can be made of a pad of cotton waste contained in gauze to tic round the head, the gauze to be of sufficient depth to also protect the eyes. The Metropolitan Police recommend that the cotton waste should be saturated in a strong solution of socia. Fare men and others whose duty it is to attend mendiary ares would do well to carry simple respirators in their uniform.

Further useful instructions are given Warning 17a, which, as we have said above, can be obtained free from the Registrar of the Committee at the address given above, and should be posted conspicuously in every build ing in the Kingdom where danger is appre hended

### THE CASE FOR TOWN PLANNING!

This volume, intended for the use of councillors, officers, and others engaged or interested in the preparation of town planning schemes, contains the complete text of the schemes passed by Parliament for the Quinton, Harborne and Edgbaston, the East Birmingham, and the Ruislip-Northwood schemes, together with a complete explanation of the complete explanation. tion of the last mentioned scheme, supplied by the chairman and clerk of that council; a complete set of the forms and notices to be used by the officers of local authorities m all stages of town planning administration, together with the text of the Town Planning Procedure Regulations, both for England and Wales and Scotland; the annotated text of the Act, and the rules as to the Compulsory Purchase of Land.

A detailed description of the various stages of town planning administration follows: one to this, and the following points are considered:—Section 1. The preparation of the prima facile case for application to the Leval Government Board for permission to prepare a scheme: II. The points to be considered in close detail when permission to prepare a scheme has been given by the Local Govern-ment Board, and the work of actual prepara-tion has been placed in hand; III. The cost of a town planning scheme; IV. Co-operation with owners and the adoption of owners plans; V. The preparation of the maps of the scheme; VI. The final stages of a town plan ning scheme; and VII The administration of the Act in Scotland

A history of the town planning movement. occupying a hundred pages, is followed by a consideration of various special points, including the fundamental principles of town planning, the desirability of town planning from the point of view of the landowner and the land developer, the cost of land development under town planning schemes, the cost of cottage building under town planning schemes, the possibilities of providing cotschemes, the possibilities of preclaing cottages for workmen under town planning schemes, the growth of the garden saluarb movement and of public utility (or co-partnership) societies, the effect of town planning legislation on housing finance, municipal the control of the saluar possibility of the saluar possibility of the saluar possibilities and the saluar possibilities are saluar possibilities. action in regard to the development estates and the building of houses by muni-

cipacities, public utility societies and private

enterprise, public utility societies and private enterprise, and the case for obligatory planning in urban and rural areas.

I pwards of forty illustrations are included in the book, including copies of maps No. 1 and No. 3, prepared in connection with actual scheme-

## Currente Calamo.

Anything off the Budget is so much to the good, and we are not disposed to find fault with Mr. McKenna's remission of the plate-glass duty, especially as it saves us the trouble of analysing a sheaf of protests against the proposed duty of 9s. 6d. per cwt., which have gone to the waste paper basket. In this case it seems that the monopolist of the trade here was a Tariff' Reformer, and that he as comfortably shed his own opinions as any Free Trader would, when they conflicted with his personal interests! It is perfectly true, of course, that most of our plate-glass comes from Belgium. It is equally true that more of it might and ought to be made here if makers were more enterprising. There is a field in this industry which is well worth the attention of capitalists who will spend time and money on up-to-date methods and make their existence known. Till then, we suppose, the Tariff Reformer will swear imported plateglass is "raw material," as we all should if our own pet corn was crushed by the Protectionist boot.

There seems some likelihood that the conditions of the York Town Planning Competition will be amended, at any rate in some particulars, on the lines of the suggestions submitted by the Society of Architects. It will be remembered that the main lines embodied in these were:-That the deposit paid should be refunded to architects who decide not to compete, and that ordnauce maps, etc., should be supplied to competitors free of charge; that the name of the assessor or assessors should be made known at once, and that the jury system of assessing should be adopted; that the premiums should be increased, and the successful competitor be employed on the present and future schemes at adequate fees, and that other competitors whose ideas are utilised should be properly remunerated. Although the council have not barred the competition, they anticipate that the views they have expressed and the action they have taken will commend themselves to the members. We hear that the deposits will be refunded, an assessor appointed at an early date, and Clause 14 amended by the omission of the author's nom de plume on the drawings. So far the premiums have not been increased, but the society's further communication on this point is still umler consideration.

The Bankruptcy Report for the whole of last year gives a t tal of 215 failures of builders through the court and under deeds, as compared with 296 in 1913, showing a decrease of 81. Perhaps the most surprising thing is that there were so many builders left who thought it worth while to call their creditors together. Then it should be noted that the new Bankruptcy Law came into force on April 1, 1914, so that for eight months of last year conditions were different. Again, the Emergency Legislation, owing to the war, prevented many creditors from proceeding with their petitions, who were held up accordingly: The International Society will open its cythough, of course, debtors could always make libition on the 16th instant, and Mr. John

themselves bankrupt, and the improved procedure under deeds of arrangement afforded the best facilities for a winding up to go on People are now wanting houses at again. about £30 a year very generally, while flats, at fair rentals, can be let before they are unished. Meanwhile the Government and the local authorities, in their strange perversity. discourage building. There is land everywhere tipe and ready for development, and there are builders willing to risk the high wages and prices; but capitalists are still shy of financing, and so private enterprise is stagnant. Old houses are fetching better rents than ever, and property all round is rising in value during this close time for builders.

There are numbers of interned enemy aliens still carrying on their business as usual in our midst, and, doubtless, doing so in the building trades. It may seem startling to the man in the street that a prisoner of war here can legally enter into contracts and make valid agreements, which, if necessary, he can enforce by action in our courts. Yet the judgment of Mr. Justice Younger in the important case of Schaffenius v. Goldberg (September 29) makes these points quite clear. The plaintiff had agreed to finance the defendant, a pictureframe maker, up to £500, with a view to his manufacturing their mouldings, of which the plaintiff was to have the exclusive supply. The plan was to capture German trade in this market, which, before the war, had controlled 98 per cent, of the whole output. They fell out in some way, and when the plaintiff was interned on July 1, the defendant refused to deal any longer with him as an enemy alien. Then plaintiff sued for damages for breach of contract, and defendant raised the point that plaintiff, being an enemy alien, and a prisoner of war, could not maintain an action in our courts. The judge held that, as he could legally enter into this agreement, he could also enforce it through the law. The Act against enemy trading only applied where this was done in an enemy country, which alone gave enemy character to the dealing. The plaintiff had a right to trade here, where he had acquired a commercial domicile, and his internment did not affect his civilian's right to make contracts, and, consequently, to enforce them in our Law Courts

The new lighting regulations in London have led to a great rush for dark blinds, and many people have had much difficulty in getting either the blinds or the men to put them up. The increasing use of casement curtains in place of Venetian blinds means that many people have had to go to considerable expense in making provision to meet the police requirements, for casement curtains are of little use in screening lights. It is possible for householders with electric light to put on slipshades which throw the light down and prevent an outside glow, but where gas is used this cannot be done effectually or safely, nor can it in shop windows. As offenders can be fined any amount up to £100, the comparatively small expenditure to provide blinds for a fairly small house is an insurance likely to prove profitable, and should not be neglected.

The winter art exhibitions this year will mostly be held as usual. The Royal Academy have several suggestions before them, one being to exhibit a number of French pictures, including some from the Luxemburg.

Lavery, Mr. William Strang, and other wellknown members will be represented. Some of the portrait busts which M. Mestrovic, the Serbian sculptor, has done in England will be shown there, including the busts of Mr. Thomas Beecham and Lady Cunard. It. was the International Society that first intraduced M. Mestrovic's art generally to the London public, although some of his work had previously been shown in the art gallery of many of the Earl's Court exhibitions.

Bognor appears to have scored as regards. the erection of cheap, decent cottages, according to a paper read at the South-Eastern District meeting of the Institution of Municipal and County Engineers by Mr. Oswald A. Bridges, the surveyor to the council. They are let at 4s. 6d. per week, and contain living room, scullery, pantry, coals and watercloset on the ground floor, and three bedrooms on the first floor. The amount granted by the Local Government Board for the erection of this block of cottages was £150 each, but the lowest tender received was £179 2s., and the council therefore decided to do the work departmentally, and it was satisfactorily carried out for less than the estimated sum. Sixteen cottages of the same type were next built in two blocks in the same road by direct labour, but, owing to the extra foundations required in difficulties met with on the site, and the war breaking out before the completion of the work, the cost rose to-£160 per cottage, for which an excess loan was granted by the Local Government Board. The council were fortunate in securing the land upon which these houses have been builtat the low price of £5 10s. per plot of 15 ft., with a depth of 100 it. The cottages are of decent elevation, with neatly paved fore-courts, and it seems a pity that, "owing to a change in the policy of the local authority," no more are to be erected "for a time."

Whitechapel Parish Church, where a German bomb, rendered innocuous, as we are reminded by the Manchester Guardian, has been presented to the rector for preservation as a memorial of the war, possessed a still more incongruous ecclesiastical ornament two centuries ago. In 1710 Dr. Welton, the High Church and Jacobite rector of Whitechapel, wished to be revenged on White Kennett, the Whig pamphleteer, who had received high preferment for his political apostasy. So he persuaded Sir James Thornhill to paint an altar-piece of the Last Supper in which Kennett, arrayed in full canonicals, was made to represent Judas Iscariot. That there might be no mistake the artist painted. even the large black patch Kennett wore to-conceal a scar, and Welton wrote beneath the portrait, "This is Judas." All London flocked to laugh at the libellous picture, until the Bishop intervened and ordered the removal of the altar-piece, which was afterwards re-erected in more decorous form at St. Alban's Abbey.

Some time ago a special committee of Glasgow Corporation were appointed to consider claims for alterations in contracts or prices in consequence of the war. About fifty applications for increases of various kinds have been considered, but the majority have been re-fused, and the remainder continued for further consideration.

In connection with the Deeping water supply scheme it has been reported to the rural district council of Spalding that water has been tapped at a depth of 343 ft., and there is an overflow amounting to 40,000 gallous a

# Our Illustrations.

ADDITIONS TO ROWLEY HALL. STAFFORD.

This house is now nearing completion, and the accompanying plans show the extent of the considerable additions which have been made to the buildings. The walls are of made to the buildings. The walls are of Hollington stone, and the roofs are covered with Dolemaen slates. We also give a view of Rowley Hall and an elevation of the entrance front facing north. The general contractors are Messrs. T. Lowe and Sons, Burton-on-Trent, and the architects are Messrs. Woolfall and Eccles, FF.R.I.B.A., 660, Castle Street, Livermood. 60, Castle Street, Liverpool.

### HOLNEST CHURCH RESTORATION, DORSET.

for the work is Mr. Edward C. H. Maidman, Lie.R.I.B.A., of Sherborne, Dorset, whose drawing we reproduce to-day.

HISTORIC BUILDINGS IN BELGIUM DEMOLISHED BY THE GERMANS.
These sketches from Ypres were made by Mr. Robert C. Kennard, of Kilburn, when resident in Belgium before the invasion of the Communication of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of t Germans, whereupon, as he says, Ypres became "a war storm spot, and now the whole of the beautiful little town is in ruins," so the subjects of our illustrations have in all probability been denolished with the rest of the architectural treasures of the place.

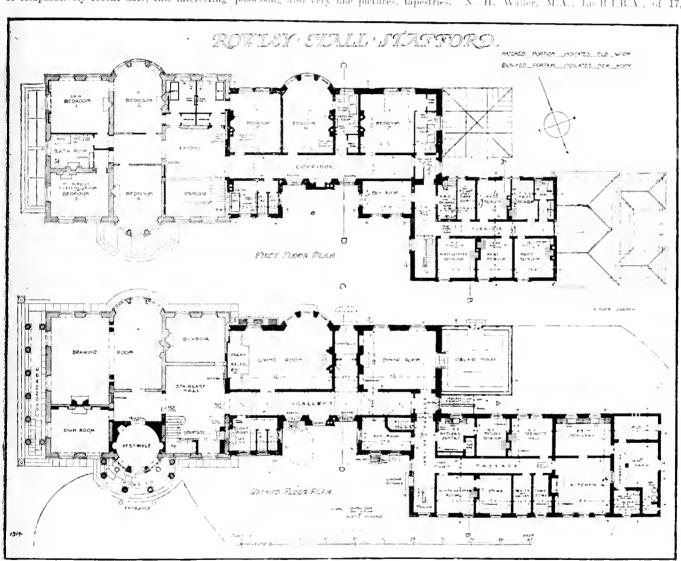

### THE MIRGHERINGE " MUSEUM," YPRES.

This may be hardly the right name to use or call it a museum, and yet no other word quite expresses its use. The house formerly belonged to a rich burgher of Ypres, and it With the exception of the nave, which is was furnished in the most exquisite taste, of comparatively recent date, this interesting possessing also very fine pictures, tapestries, was furnished in the most exquisite taste.

it is a remaint of the Ypres that once had a population of 200,000 with 4,000 looms at work. Presions to the war Ypres had a population of 16,000.

# LLOYDS BANK, ST. JAMES'S STREET, S.W.

The building was designed in accordance with the requirements of the Crown authorities in such a way that it is ght form part of a complete scheme from King Street to Ryder Street, and from St. James's Street to Bury Street, when the preparties on either side of the bank come to be rebuilt. The materials used are Pertiand stone, with Westmorlan's green slates and lead ridge for roof, the materials used and bank and lead ridge for roof, the materials used and bank and bank and bank and same ball studies. moran't green states and lead ridge for roof, the entrance doors and banking hall windows heing of bronze. The vestibules and banking hall are treated in marble and bronze, with teak doors and fittings. The architects were Messes. F. W. Waller, F.R.I.B.A., and N. H. Waller, M.A., Lie R.I.B.A., of 17,

EMESSIS, WOOLFALL and ECCLES, FF.R.I.B.A., Architects.

little country church in Dorsetshire, within a few miles of Sherborne on the Dorchester Road, is of the Perpendicular period of architecture. As the small sketch plan indicates, the building consists of a nave with north aisle with a barrel plastered roof. raison d'être of the restoration is occasioned by the insufficient strength of the north wall of the nave to uphold its present lead-covered roof. It is proposed to rebuild the wall to an increased thickness, adding stability to the buttresses and rebuilding the existing win-dows in slightly altered positions to improve the lighting, adding also a small new window near the pulpit. An old country practice is to be resorted to in regard to the lead from roof in order to meet the financial diffiroulty: as the aisle roof is stone-covered, the nave will be treated in the same way to enable the cost of the repairs being partially met by the sale of the old lead. The architect

and carpets, besides choice furniture and china. The garden also was most attractive, being laid out in harmony with the same period as the house, and set off with fountains and architectural features all in accord. People were freely admitted on introduction to see the collection, and practically the arrangement of the whole of its interesting arrangement of the whole of its interesting interior was made the subject of attraction. The entire house, both externally and internally, was typical of an excellent example of a wealthy burgh e's house of the early part of the eighteenth century.

## CORNER OF THE GRAND PLACE, YPRES.

This second sketch forms part of the group of bindings adjoining the elaborate and famous historic Cloth Hall. The archel colon nade forms part of the Town Hall, whilst the

College Green, Gloncester, and the general contra tors Messrs, Trollope and Colls, et Pimlico, S.W. We gave a double page showing a detail view of the south west corner of the block on June 7, 1912, with a descriptive note. Our illustration to day is from the original shown at the R yal Academy.

### DECORATIONS OF THE CHAPEL. CHRISTS I HOSPITAL, HORSHAM, SUSSEX.

These two tempera panels form part of a most interesting series of historic paintings forming a notable scheme of mural decorations, just now completed, or nearly so, by Mr. Frank Brangwyn, A.R.A., for the en-r hment of Christ Church Hospital School Chapel, near Horsham, Sussex, The panels famous historic Cloth Hall. The archel color nade forms part of the Town Hall, whilst the building adjoining some is part of a series of houses with seventeenth-century gabled ends. ar in situ they will have the effect of frize rarring round the chapel. The ar of the scheme consists of blues, old it and warm grey, but the effect is of the sky extending along the top of all a pictures, and so londing the whole thing tether. To give the effect desired the scale time figures, clours, etc., have been carried it in call panel. They are light in key, also give lightness to the walls. We are instead to the arrival for the loan of the photographs reproduced. Others will follow, illustrables reproduced. Others will follow, illustrables. graphs reproduced. Others will follow, illus trating further designs, next week and in of the first numbers. The subjects given to day represent the Martyrd on of St. Stephen "Lord," ay not this sin to their charge" and the Arrival of St. Paul at Rome "The tranked God and took courage." Their spien

ind scheme of colour, which is characteristical Mr. Brangwyn's masterly compositions s handled in a thoroughly broad and decora the manner. This essential quality of colour wever, with its relative value of tones, can the manner. sarcely be conveyed by any monochrome illustration, and photography, of course, has ts limitations, which are well understood. This being recognised when examining these ex ellent photographs, it goes without saying that to be enabled to thoroughly appreing that to be enabled to thoroughly appre-late the work of the painter a visit to Hor-sham is obviously necessary. These repro-ductions, nevertheless, will be valued by all who are more or less familiar with Mr. Brangwyn's beautiful designs, both at home and abroad. The present architect of the school chapel and the adjacent extensive range of educational buildings at Horsham is Sir Aston Webb, R.A. but the late Mr. Ingress Bell was for many years joint archi-test with him. ### A DICTIONARY OF ESSEX.\*

Year by year the south-western area Essex becomes more densely inhabited the overflow from the metropolis, and the number of people who are interested in the county is steadily increasing. Mr. G. Worley has written a little work on the ecclesiological and antiquarian features of Essex, arranged in two sections, relating to the archdeacouries of Essex and Colchester respectively, and in each of these short notes dealing with the parishes are arranged a phabetically. The author remarks that, with the exception of the remains at hoster. Hadleigh and Castle Hedingham, i-re - scarcely a stone left in Essex of the fortresses which the Norman barons in the throughout the country. Neither an the county boast of any cathedral hurches of that period, nnless the famous Abbey at Waltham may be quoted as an example. But the Norman builders have left abundant evidence of their activity in many of the parish churches, where, how ever, they have not hesitated to appropriate ready-made materials as they found to hand in the Roman tiles which they have meorporated in their walls and towers. A few fragments of Saxon work are here and there imbedded in structures of the twelfth and thirteenth centuries, and, as the author and thirteenth centuries, and, as the authorsing gests, doubtless in churches built after the loyalist Saxon workmen were employed in the work of building. If we look for magnificence of structure we still find it in the county at Coggeshall. Thaxted, Saffron Walden and elsewhere, in the Perpendicular style. Mr. Worley remarks:—

The peculiar charm of the Esex churches des not be in the exhibition of any given style in its purity, so much as in the intermixture of one with another in a whole which is seldom displeasing, and always instructive as an historical lesson, even where we have to regret the acts of vandalism committed at every stage by innovators on work done before them. It would be an interesting study for an antiquary of lesure to trace the sources of the various materials employed in Essex church-building. and the means by which they were brought to their destination. On the Kentish border, for ratstone, we find abundant use made of the ratstone which occurs in the neighbouring county, and could easily be conveyed by water. county, and could easily be conveyed by water. An exception which seems to prove the rule is the fine 15th Century tower at South Weald, built entirely of Kentish rag, and said to be using the instance of Kentish rag, and said to be using the instance of the control of the usual means of conveyance. In common with the other eastern counties, Essex can said a good deal of flint in its church-walls, where there is also an abundance of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the piscine, and decoration. But the scarcity of building-stone in the county itself will account for a mere extensive use of timber than elsewhere, extensive use of the process, and beliries. In the notable case of Greenst and the nave-walls consist entirely of the bisected tranks of forest-trees, and at Shenfield the arcading between the nave and north aisless an admirable indication in oak of 15th Century stonework. The nine square nulses of almost supposten woodland which survive in Century stonework. The pine square index of almost upbroken woodland which survive in Herring Fores and the adjacent fragment of Hoinault remind us of the time when the whole interior was covered with trees, a refuge in wirfare, and an inexhaustible source of indistry in peace. Brick appears in the Tudor read the churches at East Horndon and little Chignal fotherwise significantly called Brok Chignal fotherwise significantly called Brok Chignal fotherwise significantly called the chignal fotherwise significantly called Brok Chignal fotherwise at East Horndon and Little Chignal fotherwise strainformatic material through strain while herek towers are seen as conjugate the dimarks at Ingatestone, Fryering a bother places.

The author briefly describes the remains of the more important pre-Reformation religious houses still to be found in the county. The resent selection of St. Mary's Church. Chah sford, as the Cathedral of the new discuss and the boundaries of the East Action sees as fixed by the Order in Council of April 7, 1914, are referred to. A useful hibilography of works of the architecture and ecclesiology of Essex is given, but a view of the separation of the parishes in the two archideaconries a sketch map of the county would have added immensely to the county would have added immensely to

Essex: A luctionary of the County, mainly Ecclesiological By G. Worley 106 pages. Cloth bound, 5s. net. London, G. Bell and Sons, Ltd. Te.

the value of the volume. A few illustra-tions would have been acceptable, and although we are now halfway between the taking of the censuses it would have been helpful and an inexpensive matter of compilation to have inserted after the name of each parish the number of the population as ascertained in April, 1911.

### ---OBITUARY.

We regret to learn that Captain Douglas Carmichael, B.A., of the 9th Buttalion, Rifle Brigade, was killed in action in Flanders in action of September 25. Captain Carmichael, who was only twenty-one years of age, was the elder son of Mr. and Mrs. James age, was the elder son of Mr. and Mrs. James Carmichael, of Redelyffe, Streatham Park, S.W. He was educated at Leys School and Jesus College, Cambridge, and passed out of the University with honours. He had just entered his father's business at Trinity Road, Wandstand out the way broke out. He oband with entered by Road worth, when the war broke out. He obtained a commission as second lieutenant from the Officers' Training Corps in September of last year, was promoted to First Lieutenant in October, and to Captain in March last, being placed in charge of the machinegun section. Colonel W. Villiers Stuart writes to his father:—"Douglas was killed on September 25 in action near Belle Waarde Farm. His bravery is a byword in the divi-sion. He fought that day with infinite conrage. I have no words and no one else could find any to express his magnificent bravery. I shall never see a soldier like him again; it is quite impossible that anyone so fearless could be found. He carried four lines of trenches with his company under a most desperate artillery and machinegun fire, and when masses of Germans came against him, by his wonderful personality he kept his men, now reduced to a handful, in good spirits, and led them again and again to the attack. He was wounded early in the day, about 5 a.m., but made nothing of He was killed instantaneously by a bullet in the forehead as he was once more leading a bomb charge." Mr. Carmichael has also received a letter from Sergeant W. Walker, machine-gan section, who writes:—" He was in command of the attack on the morning of the 25th, and right well did he lead us until he was hit in the leg. Then we pushed forward alone, as he refused to have any assistance: but just after I saw him hopping on one leg towards the next line of German trenches under a murderous fire. Your son was still in command, absolutely refusing to he taken back. Your son was killed with a machine-gun, and I was twice wounded at the same time. It was instantaneous, and his last words were. For God's sake, boys, hold them back. He earned the V.C. fifty

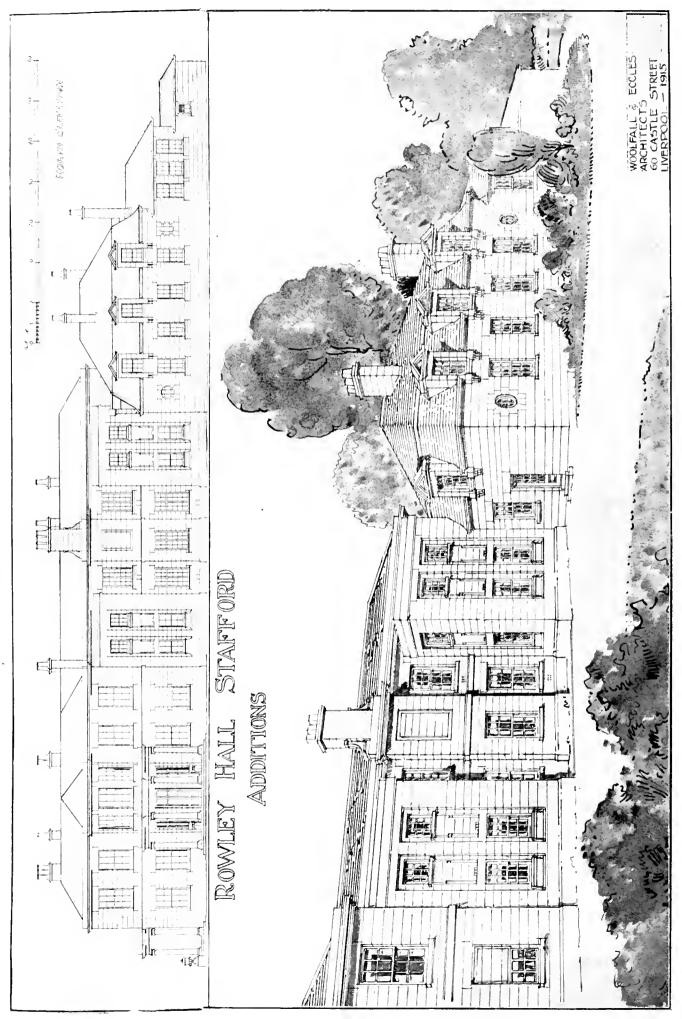

We also regret to hear that Mr. Henry We also regret to hear that Jif. Henry Holloway, of Burntwood Grange, Upper Tooting, and of Messrs, Holloway Brothers, Bridge Whart, Grosvenor Whart, Pimlico, sustained a similar bereavement on the same day, his third son, Captain Bernard Henry Holloway, B.A., of the Royal Sussex Regiment, having been killed in the same engagement. Captain Holloway, who was twenty-seven years of age, was also educated at Leys School and Jesus College. Cambridge. He was not a member of his father's firm.

#### LEGAL INTELLIGENCE.

LEGAL INTELLIGENCE.

ANCIENT LIGHTS.—On Wednesday, in the Chancery Division, the adjourned motion for an injunction to restrain Messrs. John Barker and Sons from erecting a building in Townwell Fold, Wolverhampton, so as to cause a nuisance or illegal obstruction to the plaintill, Mr. S. W. Page, in the enjoyment of certain ancient lights in his buildings at No. 30, Lichfield Street, came on for hearing before Mr. Justice Younger. It was admitted that the plaintiff's lights were ancient lights, and the Judge ordered the motion to stand over till the trial, the defendants to be at liberty to carry up their wall so far as necessary to complete the roof, but not exceeding three fect over the present height, they undertaking to abide by any order the Court might make at the hearing as to pulling down or altering anything erected by the defendants since September 15.

ARCHITECT V. MILLOWNERS.—Litiga-

ARCHITECT v. MILLOWNERS,-Litiga ARCHITECT V. SHLLOWNERS.—Litigation has been in progress between the Ross Spinning Company, Bacup, and Mr. A. Stott, of the firm of Stott and Sons, who were the architects of the mill. The litigation was in the nature of writs demanding payment of calls, Mr. Stott being a shareholder in the company to the extent of £7,500. Mr. Stott entered a counter-claim against the company demanding £12,207 for services rendered under an alleged agreement of September, 1903. The action should have come on at the Manchester action should have come on at the Manchester Assizes, but for the convenience of the parties was ordered by the judge to be tried at the Imperial Hydro, St. Annes, by Mr. Arthur J. Ashton, K.C., as referee. The action was part heard when a settlement was reached by which Mr. Stott and his firm withdrew all claims against the company and the company abandoned their claim against Mr. Stott in respect of the calls. Mr. Stott was to release to the company the whole of his shareholding amounting to £7,500 and give up all papers relating to the mill in his possession. The sum of £300 which Mr. Stott had paid into court was to be equally divided between the parties, and the which Mr. Stott had pand into court was to be equally divided between the parties, and the parties were to pay their own cests and half the costs of the referee. These terms were subsequently embodied in an award made by the

DISPUTED USE OF A SEWERAGE OUT-LET.—In the Vacation Court on Wednesday, before Mr. Justice Younger, the case of the Wapentake of Ouse and Derwent Commissioners and Fletohers (Shipley). Limited, was again mentioned, it having been standing over for negotiation. We reported the case in our issue of September 8, p. 278. Plaintiffs claimed at injunction restraining the defendants from continuing the use of an outfall recently concontinuing the use of an outfall recently con structed, which it was alleged allowed sewage and other foul matter from defendants' works to flow into the Cherry Orchard drain of the plaintiffs' system of drainage. Mr. H. Terrell, K.C., for plaintiffs, said there had been negotiations between the parties, but no agreement had been come to The Life Levit levit. negotiations between the parties, but no agreement had been come to. The defendants had built certain works and cottages, and were pouring the sewage direct into the plaintiffs drain. Defendants said they had not caused a nnisance, and were prepared to move all the sewage in expectation of a drainage system sewage in expectation of a dramage which had not been carried out by the local authority from motives of economy. Plaintiffs which had not been carried out by the local authority from motives of economy. Plaintiffs now suggested that without prejudice to the legal rights of the parties defendants should agree to an undertaking until the trial or further order to cleanse and scour the Cherry Orchard drain, so far as the same was fouled by the sewage or effluent coming from the dependants' sewars or cottages and to remove any by the sewage or effluent coming from the de-fendants' sewers or cottages, and to remove any obstruction to the free and natural flow of the frain caused by such sewage or effluent being lischarged therein, pending construction by the ocal authority of their intended drainage cheme for Barlby, when they would forthwith connect or Barlby, when they would forthwith connect with the proposed main drain. Costs to be costs in the action. Mr. Mathew, K.C. or defendants, asked his lordship to reserve he costs, because his case was that the motion was quite misconceived. He agreed to the indertaking suggested on the clear understanding that he offered it merely as a matter of eace, and without prejudice to defendants lights. He objected to the words in the undertaking "fonled by sewage or effluent coming aking aking "fouled by sewage or effluent coming om defendants." After some discussion it was greed to retain all the words objected to with he exception of the word "effluent," and the ase stood over for speedy trial, costs being

WREXHAM BUILDING DISPUTE.—At Jrexham County Court, on Wednesday, his noore of his noore of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the

architect, Wrexham. Plaintiff claimed 5.237 lbs. 7d., balance due under a building contract and for extras. There was a counter claim of \$109 14s. od., which included a penalty of £120 for delay in completing the work, and there was an alternative claim for damages amounting to £69 6s. od. His Honour said with the exception of one or two smal, it ms p aintiff's claim was substantially admitted, and the assumed had been as to whether defendant could set off against the claim the sum of £103 claimed by way of counter claim. Messix, Lewis Bees, built a honce for Mr. Swanson. The tender was sent in and accepted on defendant's specification and quantities. I was admitted that in the course of the work defendant made many alterations from the plan of the building, which delayed the work. An order for new many alterations from the plan of the building, which delayed the work. An order for new work was given after the time limit had actually express. He held that defendant was not entitled to the penalty he claimed for delay, and his claim for damages was alto gether too remote, and it seemed as if it was an afterthought. He was alluding to the hotel expenses, loss of interest, etc., which in law defendant could not possibly sustain. With regard to defendant's claim in respect of the painting work, his Honour said the contract provided for the calling in of an umplie in case of dispute. This was not done. Defendant summarily handed over the painting work to a third parity, which he was not entitled to do. Therefore he was not entitled to claim the difference between the price he paid for painting and the price set down in the contract. Defendant's claim of £22 17s, bd. in respect of the builders' failure to do the work was grossly exaggerated. The correspondence showed that in respect of this item on February 23 defendant only claimed £7 10s. But this was not the only answer to it. The builders were bound to keep the building in proper repair for six months after completion. During this period the architect made certain complaints, and the builders did the work. After the expiration of the six months following the completion of the building, and until the defendant was threatened with proceedings, there was nothing in the correspondence to show that he comwhich delayed the work. An order for new work was given after the time limit had of the building, and intil the defendant was threatened with proceedings, there was nothing in the correspondence to show that he complained as to the various defects in respect of which he claimed. He had come to the conclusion that the plaintiff was entitled to the amount for which he sued, and that the set-off defendant had endeavoured to raise tailed. Judgment was then entered for plaintiff, with costs and allowances. costs and allowances.

#### PROFESSIONAL AND TRADE SOCIETIES

SOCIETY OF ENGINEERS. = On the 4th inst., at a meeting of the Society of Engineers (fincorporated), Mr. Sydney G. Turner, A.M. Inst.C.E., barrister at-law, read a paper entitled 'Law and Engineering—Some Points of Contact.' The general object of the author was to show that in almost every branch of engineering practice the provinces of the engineer and the lawyer overlap, and of the engineer and the lawyer overlap, and to advocate the establishment of some periodical meeting, open to the members of both professions, at which subjects of common interest could be discussed. In the section dealing with municipal engineering, the special topics selected were sewerage and drawage, and the execution of works of priodical services. vate street improvement. In regard to the former, the decision of the House of Lords in the case of the Wood Green Urlan District Connell v. Joseph was discussed: and in regard to the latter the author dealt more particularly with the duties of the engineer in connection with the apportionment. In the section dealing with water engineering the question of underground supplies was suggested as a subject for discussion.

The Red Cross Fund which is being raised by members of the Timber Trades Federation has now reached £3,320.

For the erection of a convalescent home of Grange-over Sands. Lanes, the Workmen's Club Umon has voted £20,0.0.

Mr. G. A. T. Middleton, A.R.I.B.A., the first secretary of the Society of Architects and a past vice president, has been elected an homorary member of the society in recognity n of his services to the society and the profession more particularly in the cause of registration Mr. Middleton's health is, unfortunately, such that he is compelled for the present to take a compiled extest from all professional engagements.

#### STOFFA DI ITALIANO,

Sir. You may possibly be able to use the enclosed versus. They were sung at a recent bumplet here, when the Architects' chapter entertuned the artists and sculpt is engaged in decerative work at the Ex-post on. Am sorry I cannot say who wrote

It is some twenty-seven years ago since I as the twenty-seven years ago since is some twenty-seven years ago, since is solly note of my work in aid of the quantity system in the United States. It will one is some day." With hest wishes, Y are faithfully,

G. Alexander Wright,

354. Pine Street, Sin Francisco, Cal.

'We are sure it will, and in no small degree owing to the good work of an old friend, whom we are delighted to hear from, Eb. "B.N."]

#### STOFFA DI ITALIANO. Tune: CHRISTOFER COLUMBUS.

Time: Cinistoffic Colleges.

If your to you about some men whose names are known to list'ry.

Their works are copied right and left by men of great sophistry.

Architects, both young and old, how down to them quite Int'ly.

Their names, you know, all end in "O"—they come from sunny Italy.

#### CHORTS

Mike Angelo, Palladio, Vignola, and San Gallo. They wouldn't do a thing if they heard us sing, "Stoffa di Italiano."

Among the class of famous men was one who's named Aignold.

He could draw the Orders mesde down, while rowing his goundoln, air Callo, too, could do this track, likewise the Limbardo.

But it gave him the gour, when he found out he wisn't the only dago.

Pallaho, you must know, gave these men a great

Published you must know, gave cases men a great surprise.

When, on Della sidute, he designed a volute of most giguith size.

Bruneleschi's name shone out to fame when he built the Palazzo Pitti

But, also and alack! if he came back, he'd find one in ev'ry city.

(Chorns.)

#### (Chorus)

Another famous man you know, who built the great Saint Peter. And they do tell he did it well and didn't try hard, either.

hard, either.

O Mike, you know you were not slow to adopt Bramenti's plan.

With your glorious dome, you paralysed Rome, and hearing at famous man.

#### (Chorns.)

So, if you want to design in the classic line and draw your stode right smart. Lay in a stock of balustrades, festions, and eggs and dark.

State of the Communication of the Rendstance will some to you quite easy.

### Chorne time : TIPPFRARY.

time: Therefore,

It's a long way be k to the office,

It's a long way to go;

We're all here for a time to-night,

Io must the arcists, you know
say good-bye to the drawing board,

And forewell T square.

It's a long way back to the office,

For my heart's right here

Lieuveraya R. B. Angus, R.E., late of the Egyption Public Works Department and 17, Votern Street S.W. was killed at the Dir-ceptles of September 22.

---

The first section of the restoration of the arisin church of Newton St. Cyres near Neter has just been completed at an outlay of ver £1.00. The architects were Messrs Harct le and Sons, of Exeter.

#### PARLIAMENTARY NOTES.

LAND VALUATION STAFF REDUCED. LAND VALUATION STAFF REDUCED. The Chamcelor of the Exchequer, replying to Mr. Currie and Sir J. Rolleston, said: The stage which has been reached in the original valuation of land under Part I. of the Finance (1963-10) Act, 1910, renders it possible to dispense with the services of a number of the temperary valuation staff, and the reduction in numbers is being effected, so far as possible, by selecting for discharge men of military age. There is no intention of replacing the officers now being discharged. The number of Valuation Office officials whose employment under the Board of Inland Revenue terminated between March 1 and September 1 ployment under the Board of Inland Revenue terminated between March 1 and September 1 is 1.457. The number of new appointments in this period is 12. The number of the effective valuation staff on September 1 was 2,620, the salaries amounting to £411.150. Valuation Office premises to the rental value of £2,800 hat a sidilar already bear given up or will be Other premises to the rental value of £2,800 have either already been given up or will be given up at an early date. The number of officials employed on September I in the land values branch of the Inland Revenue Department was fifty-six, their salaries totalling £9,570,-Mr. Watt: May we take those figures as indicating that the Government have abandance of the salaries was sufficiently to the salaries of the salaries are salaries. dened the taxation of land for the future? The Chancellor of the Exchequer: No.

#### -TRADE NOTES.

The "Poyle" system of ventilation (natural), inbracing Boyle's latest patent "air-pump" ventilator and air inlets, has been applied to the board-room at the Miller General Hospital, Greenwich.

We learn that additional plant has recently been installed in the Harrogate electricity station, and that after excavations had been made there was trouble with running water. Pudlo there was trouble with running water. Fudio was then incorporated in the cement as a water-proofing medium with excellent results. Although there is a stream in close proximity, the in error of the building is perfectly dry.

A new Wesleyan chapel at Lydden, Kent, has been formally opened, Mr. S. Watson, of Caversham, Reading, was the architect.

---

At Bootle new premises for the Millom Co-operative Society, Limited, have just been opened. The builder was Mr. L. Fairclough.

The town council of Luton have received the sanction of the Local Government Board to the borrowing of £2,000 for additional pumping plant at their sewage disposal works.

A Local Government Board inquiry was held Sheerness on Friday before Mr. H. S. Bidwell into an application by the urban district council for sanction to borrow £6,750 for works of additional water supply to the town.

The new town hall at Omagh, erected at a c.t. of £4,000, has been completed. The frontage of the buildings is 47 ft., and they extend back a distance of over 160 ft. The main assembly hall, which is 85 ft. long, 37 ft. wide, and 28 ft. high, will accommodate over 600 persons.

There have been completed twenty-nine workmen's dwellings, arranged in three blocks, which the corporation of Newcastle-under-Lyme started shortly before the outbreak of war. The scheme has been carried out by Mr. A. Pattison, the borough surveyor, from plans prepared by Mr. Frank Emery.

A memorial to the late Miss Braddon was uncorted at Richmond Parish Church, Surrey, on Monday by the novelist's youngest grandely idean, Mess, and Master Maxwell. The memorial is a bronze portrait in relief, on a circle of laurels and oak. It is the work of Mr. John E. Hyett. It is next to that of Edmund Kean.

Mr. J. H. Chubb, of Penryn, who passed Mr. J. H. Chubb, of Penryn, who passed away on Thursday evening at the age of sixty-six years, went to the borough many years ago as surveyor under the old Highway Board, and in 1895 became surveyor to the rural district council. An ardent Freemason, he was a member of Lodge Three Grand Principles, Penryn, and held previncial honours.

At St. Anne's Church, Upperton Garders, Eastbourne, Mr. Harry George Lav. A.R.I.B.A., son of Mr. C. W. Lay, The Laurels, Wellingborough, was married the other day to Miss Violet Peppercorn, dunghter of the late Rev. A. T. Peppercorn and Mrs. Peppercorn of Stoke Prior, Leominster. The ceremony was performed by the Rev. J. W. Peppercorn brother of the bride.

## Building Intelligence.

GREAT TOWER STREET, E.C. The office of Christ's Hospital was transferred last week from Aldersgate Street to 26 and 27. Great Tower Street, a site which came into the possession of the governors under the will of John Fowke in 1686. From the designs of Mr. Arthur Blomfield, with Messis. Howell Williams, Limited, as builders, there have been erected premises in the Queen Anne style, the predominant material being Anne style, the predominant material being red brick of cheerful hue faced with stone. The ground floor, which is approached through a wide hall, contains, in addition to the general office, separate rooms for the chief clerk and deputy clerk, a telephone moun, a waiting room, a typing office, and the re-ceiver's office. In the basement are strong rooms and general storage accommodation. rooms and general storage accommodation. Below is the heating apparatus. A lift connects the ground floor with the upper portions of the building. On the first floor is the Court Room, extending east and west the full width of the premises. It is panelled in oak, and at each end has been affixed a stained-glass window, one showing the arms stained-glass window, one snowing the arms of Edward VI., Charles II., and George V., and the other those of the Hospital itself, the City, and Sir Richard Dobbs. On the same floor are the treasurer's room, the committee room, and a waiting room. A mezzanine floor contains the caretaker's quarters, and above are two rooms, in which the entrance and competitive examinations of the two schools will be held. The historical pictures, sculptures, and other treasures have been removed to the new offices.

LIVERPOOL CATHEDRAL.-It is now beginning to be possible, says a correspondent of the Guardian, to gauge the importance of the addition of the first great transept to the choir, the fabric of which has been for some time practically complete. As the cathedral emerges into view seen by one approaching Duke Street along Hope Street from the Philharmonic Hall, the two ends of the transept already thrust themselves up finely, and give a breadth and massiveness to the building which help the imagination to picture its appearance when the huge central tower, second transept, and nave shall fill out the site. Whether any of us will live to look on this vision is another question. A party of Freemasons lately visited the Lathom Memorial Chapter House, which the Masons of Laucashire are presenting to the Diocese. It is a lofty octagonal building with a basement room beneath the Chapter-room. The stained glass is to be done at the Merton Abbey Works, and the subjects, as for the stone carving, are being chosen with special reference to the masons' craft. One of the windows is to represent the Dadiction of the dows is to represent the Dedication of the Temple of Solomon.

LONGFLEET, DORSET.-The church of St. Mary, Longfleet, near Poole, has been re opened after enlargement at a cost of £6,000. The architect was Mr. H. Kendell. The area of the church has been increased by 1,400 ft. In addition to the new nave and its aisles there are north and south transepts, clerestory windows, chancel, organ chamber, and ves-The new nave is in architectural keep tries. ing with the style of the remainder of structure. It has been constructed of Purbeck stone, with stone dressings, the inside being faced with random rubble, Purbeck piers, with dressings of stone. A tiled roof has been substituted for a slate one. The heating is by means of radiators, and electric light is installed. The north transept is fitted up as a side-chapel for weekday services. and an oak screen separates the vestry from the church. Although a gallery has been dis-pensed with, there is accommodation now altogether for between 600 and 700 people.

The question whether a draughtsman The question whether a draughtsman is a workman within the meaning of the Munitions Act, and therefore liable to all the restrictions and privileges conferred by the Act, was decided in the affirmative by the phairman of the Newcastle-on-Tyne Munitions Tribunal on Wednesday.

## Bur Office Cable.

To the annual exhibition at the Roya West of England Academy in Queen's Road, Bristal, was opened yesterday (Tuesday and a perhaps the best display yet all the tree. Among the works of interest are a Venetian scene by David Murray, R.A. A Day in October "; "Seanty Pastunes," by Chande Hayes, R.L.; "A Little Mother—by Arthur Hacker—a girl saying proposed that other many transportations of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the grace at the table with two small brothers Charles II, introducing Barbara Palmer to the Queen at Hampton Court, 1652," and "The Herring Seison, Great Yarmouth, both by Edgir Bundy, A.R.A. "On a Suffolk Waterwiy," lowlying country with a river and towing path, by Bertram Priest. man, R.B.A., is an intense contrast to R. G. Goodman's "A South African Landscape," in which the distant hills are garishly coloured. Near by is "A Fallen Idol," by the Hon. John Colher, T. C. Gotch has the Hon. John Collier. T. C. Gotch has four convases hung, of which the more attractive are "The Flag" and "The Flight." La Cage Aux Amours," by Charles Sims A.R.A. is very offer. A.R.A. is very effective, and one of the book of the water colours is Sir Ernest Water low's "A Lock on the Ouse."

In a letter to the Royal Geographical Suciety. Sir Aurel Stein described his de-tailed survey last winter of the Turfan depression in the north eastern corner of Chinese Tarkestan), and his series of archeological investigations in the ruined town of Id.kut-shahri. The systematic clear inz of the deeper strata brought to light interesting remains in the shape of fresco pieces, fragments of painting on paper and cloth, stucco relievos, illustrating Buddhist art at Turian. He also recovered manuscript remains in the Uignr, Tibetan, Chinese, and Manishwan scripts, a hoard of metal objects, and a large number of coins, which enabled him to fix with approximate accuracy the date of its deposit in the time of the Sung dynasty about the 10th century). In numerous rock-cut caves once used for Buddhist worship in the picturesque Toyuk, Sir Aurel worship in the picturesque Toyuk, Sir Aurel found some fine fresco paintings and stucco relievos. At another site he explored an ancient burial ground containing tomb chambers cut in hard sandstone, in which were found many Byzantine and Sassanian coins, and also broades and other decorative fabries showing designs usually associated with Persian work of Sassanian times.

The installation meeting of the Renaissance Lodge of Freemasons, which was founded mainly by the members of the London Asso-Master Was Mr. Arthur S. Jennings, the editor of an econt mporary The Decorator, editor of an econt imporary The Theorator, who, after inducting his successor into the chair, signalised the completion of his year of office by presenting the lodge with a banner which we hope to illustrate in our next issue. It has been nost handsomely worked in embroidety in the studio of Mr. Arthur Wilcock, the designer, and for purity of design as an example of Renaissance work can hardly be excelled. The new Master of the lodge is Mr. Albhibald Campbell, well known as a partier in the firm of Messrs. Campbell and parties in the firm of Messis Campbell and Christmas, and the officers for the year include Messis E. W. Wightwick, Senior Warden; E. E. Anderson, Junéor Warden; J. J. Heney-chin h. Treasurer; Chas. E. B. Kibblewhite, Secretory; T. A. Hall and C. Ives, Deacons; H. Price, Procter of Geremonies; Lieut, Col. Duncan, Assistant Director of Ceremonies: I Cayley, Almorer: J. Wood, Organist: C. Harris a., Assistant Secretary: G. Colley, Inner Guard: W. Falkner, John Lewis, H. S. Nott, Stewards: and H. Passenger, Tyler.

The third programme of War Lectures The third programme of War Lectures under the Chadwick Trust will be given as fellows:—Professor D. Noel Paton will lecture on "Food in Wartime," at the Hampstead Central Library, on October 4, 11, and 18, at 8.15 p.m.: Dr. R. O. Moon will be time on "Typhus in, Serbia," at the Peril Schiev of Medicine on October 20. Reval Sciety of Medicine, on October 20 and 29, and November 3, at 5.15 p.m.: Mr. A > n Shell will lecture on "Emergency

Military Hospital Construction," at the Royal Institute of British Architects, on N. vember 10, at 8.15 p.m.; and Mr. W. E. R.ley, F.R.I B.A., superintending architect to the Loudon County Council, on "Some Conclusions on Housing Our Workers," at the Royal Sanitary Institute, on November 17, at 8.15 p.m.

A practical method of tracing some useful curves, by Arthur Hindhaugh Shield, M.Inst.C.E., is reprinted from the Proceedings of the Institution of Civil Engineers. and is published at its office, Great George Street, S.W. While the method described is not mathematically correct, it is sufficiently accurate for most practical purposes, and has been used by the author for many years in the general work of an engineer's office. With ordinary care and skill a parabola, hyperhola, or logarithmic curve can be drawn with the same approach to accuracy as a circle is drawn with the usual drawing instruments. Further, it can be drawn much mining points in the curve by computation, or by intersections and subsequently tracing the curve through these points. The usefulness of this method is not confined to the drawing office, but is also applicable to setting out on the ground the cubic parabola  $y = cx^3$  used for transition curves on raily = cr used for transition curves on ran-ways, and to the production in patterns, templates, or stencils of curves for artistic and other work. It is a well-known principle in art, having its origin in nature, that a curve is more beautiful than a straight line, and a curve which continually changes its curvature is more beautiful than a curve of uniform curvature. Such a line of changing curvature can readily be given to a bracket by setting it out on the pattern or template

by the method given for  $y = \frac{c}{x}$  or any similar curve, and will be much better in appearance than the usual approximation by irc of circles. The paper is illustrated by nine diagrams.

"An Introduction to Applied Mechanics," by E. S. Andrews (Cambridge University Press, 4s. 6d.) is a welcome departure from the methods of some of the older textbooks. which give the student too much applied mathematics, and many of the modern ones. which neglect the proper explanation of mechanical principles in the eagerness to discuss their engineering application. The author has striven, and we think successfully, to present the elementary principles of mechanics in clear terms, basing his treatment more on graphical conceptions than on purely mathematical analysis, and then to show the application of those principles to the simple problems of engineering and architecture. A number of simple experiments are given; principally, and advantageously, those which need only the simplest apparatus

The foremen employed on barrack struction by Messrs. Sykes and Son, Ltd. of 10. Essex Street, Strand, W.C., were centertained to dinner at the King's Head Hotel, Richmond, Yorks, on the 25rd ult. Mr. Alfred Gee, the managing director, who presided, in replying to the toast of the firm, stated that it had been in existence for hirm, stated that it had been in existence for just over 150 years, and dealt with all the trades in turn. "We start with the levellers," he said. "They give us a fair and square start, and may we always act on the square and keep a level balance. The excavators start the building and also perform the last rites on us. May we therefore, all through, drive a straight furrow. The concretors give us a sure foundation: the steel erectors a substantial framework, without which which we should be like a man without ribs, or a lady without corsets. The bricklayers fill all in and give shape to the building. The carpenters and felters finish and straighten things up, they give us a good straight floor to walk on, and may The plasterers we always waft straight. coat the walls smoothly; the plumbers the water in, and help to keep us clean; the drainlayers remove all that would otherwise offend; the painters contrive to cover up a multitude of sins; all through the timekeepers keep us all up to the

scratch; and the general foremen keep their scratch; and the same everything." In In conclusion, he implored everyone to furget who are doing so much for us, 'Tommies," to strive to give them good, sound homes with all the speed we are capable of. foremen representing the trades responded with good effect.

## -

## TO ARMS! 4th Battalion ('Architects") Central London Regiment Volunteers.

London Regiment Volunteers.

Rectuits are ingently needed for the Regulars, Territorials, and Volunteers. Intending recrnits should apply to Battalion Headquarters, where they will be advised as to the branch of the Service for which they are best suited.

ORDERS FOR THE WEEK, BY LIEUTENANT-COLONEL A. W. WARDEN.

GENERAL PARADE.

saturday, 9th inst., at new Drill Headquarters, Chester House, Eccleston Place, at 3 p.m. Uniform parade.

ENTRENCHING.

Members who have volunteered for this will receive written instructions regarding hour of parade,

WORKING PARTIES.

New Drill Headquarters.—Parties are required each even ng commencing at 6 p.m. Volunteers should immediately communicate with Platcon Communicate of H. Parker at Chester House, Eccleston Place, S.W.

DRILLS AND PARADES.

"A" Company.—Tuesday, miniature range, Gas Light and Coke Company's premises, Monek Street, Westminster, 5 to 8.30 p.m.

Wednesdays.—Company Parades, 5.15 to 7.15 and 6.15 to 8.15, at Chester House, S.W.

Thursdays.—Signalling at Chester House. See orders from Acting Battalion Signalling Sergeant Cheadle.

orders from Assume Cheadle.

"B" Company.—Winiature range and Company Parades as for "A" Company. See orders at local

Parades as 101 A. Company.—
headquarters.
"C" Company.—See orders at local headquarters.
Pavulon, A.A. Athletic Ground, Boreham Wood.
"B" Company.—Platoon and Section Drill at
Chester House, Tuesday and Thursday, 6.45 p.m.
Company Parades, Wednesdays, as for "A" Com-

Company Parades, Wednesdays, as for "A" Company.

SCHOOL OF ARMS.

Drill Headquarters, Chester House,—Instruction in bayonet fighting, gymnastics, physical drill, boxing, and single sticks on Tuesday from 6 to 5 p.m.

RECRI'IT DRILLS.

"A" Company,—Chester House, 5.15 and 6.15 Wednesdays and Fridays.

"B" Company,—Duwich College, Mondays, 8 to 10 p.m., and Thursdays, 6 to 5 p.m.

"C" Company,—Borcham Wood and Elstree District Headquarters, A.A. Athletic Ground, Borcham Wood. For full particulars apply to Alan Potter, Grey Gables, Borcham Wood, Herts.

"D" Company,—Chester House, Tuesdays and Thursdays, 6.45 p.m.

CORRESPONDENCE.

Special attention of members is drawn to the fact that correspondence should be answered by return. If this is not attended to the office work of the Corps is immensely increased. Enrolment forms of new members and all correspondence not referring to recruiting for the Army or to financial matters must be addressed to the Adjutant, 10, Conduit Street, W., and regarding recruiting for the Army to the Recruiting Officer at Battalion Headquarters, and regarding accounts and subscriptions to the Paymaster, W. R. Hughes, 146, Dashwood House, E.C.

By Order.

By Order. By Order, L. R. GUTHRIE, Adjutant. BATTALION HEADQUARTERS, 18, TUFTON STREET, WESTMINSTER, S.W.

---MEETINGS FOR THE ENSUING WEEK.

MEETINGS FOR THE ENSUING WEEK.

The Itehen Urban District Code are done to build an isolation hespital at a cost of £5.12 and propose to pay for it out of revenue by instalments spread over five half years.

mstaments spread over tive na tyears.

Mr. Graham C. Awdry, of the firm of Messrs.
Foster, Wood, and Awdry, of 35. Park Street.
Bristol, has been appointed diocesan surveyor for the Archdeacoury of Bristol; and Mr. W. A. H. Masters, of 42. Cricklade Street, Swindon, has been appointed diocesan surveyor for the North Wilts Archdeacoury.

#### TO CORRESPONDENTS.

We do not hold ourselves responsible for the opinions of our correspondents. All communications should be drawn up as briefly as possible, as there are many claimants upon the space allotted to

corresp maents.

It is particularly requested that all drawings and all communications respecting illustrations or literary matter, books for review, etc., should be addressed to the latter of the Brunnia Kwas, Einigham House, I, Arundel Street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' risks, and the Editor will not undertake to pay for, or be hable for, unsought contributions.

for, unsought contributions,

\*\*\*\*Drawings of selected competition designs, important public and private buildings, details of old and new work, and good sketches are always welcome, and for such no charge is made for insertion Of more commonplace subjects, small churches, chapels, houses, etc.—we have usually far more sent than we can insert, but are glad to do so when space permits, on mutually advantageous terms, which may be a certained on application.

When taxoning us with drawings or photographs

When favouring us with drawings or photographs, sighteets are asked kindly to state how long the building has been erected. It does neither them nor us much good to diustrate buildings which have been some time executed, except under special circumstrates. stances.

nces. Telephone: Gerrard 1291. Telegrams: "Timeserver, Estrand, London."

Cheques and Post-office orders to be made payable to The Strand Newspaper Coupany, Linkell, and crossed London County and Westminster Bank.

#### ADVERTISEMENT CHARGES.

The charge for Competition and Contract Advertisements, Public Companies, and all otheral advertisements is 1s. per line of Eight Words, the first line counting as two, the minimum charge being 5s for four lines.

for four lines.

The charge for Auctions, Land Sales, and Miscellaneous and Trade Advertisements (except Situation Advertisements) is 6d per line of Eight Words (the first line counting as two), the minimum charge being 4s, 6d for 50 words. Special terms for series of six insertions or more can be ascertained on application to the Publisher.

SITUTIONS VACANT AND PARTNERSHIPS.

The charge for advertisements for "Situations Variant" and "Partnerships" is One Shilling for Twenty-four Words, and Sixpence for every Light Words after All Situation Advertisements must be propared.

#### SITUATIONS WANTED.

Advertisements not exceeding Thirty Word ite has we of name and address, are inserted under the heading "Situations Wantel," free of charge

Rates for Trade Advertisments on front page special and other positions can be obtained application to the Publisher.

#### REPUBLS TO ADVERTISEMENTS.

Replies by advertisements can be received at the Office. Ethingham House, I. Arundel Street, Strand, W.C. free of charge. If to be forwarded under cover to advertise; an extra charge of Sixpence is made—uses Notice at head of "Situations.")

Advertisements for the current week must reach the office not later than 3 p.m. on Tuesday. Front-page advertisements and alterations or stop orders for scrial advertisements must reach the office by first post on Monday to secure attention.

Varying sizes to 24 in, high, 13s, per desk, Larger size desks, 16s, 6d, per desk,

The new open-air school for tuberculous children, built at a cost of £2,880 on the Mount Vernon estate, Barnsley, has been formally opened. Mr. E. W. Dyson was the architect.

A stained-glass window has been dedicated in Slipton Church, Northants, to the memory of Anna Frances Collins, wife of Canon Collins. The window is by Messrs. Heaton, Butler, and Bayne, Garrick Street, W.C.

The death occurred on Saturday, at the age of sixty-six, of Mr. Arthur Sessions, a well-known Cardiff builder and contractor, and for many years a member of the City Corporation He was a native of Gloucester, and belonged to an old Quaker family.

The Monaghan Rural District Council recently advertised for an architect or engineer under the Labourers' Act. Mr. Hugh McCague, a working mason, was appointed, on the ground that in the view of the majority Mr. McCague was a practical man. The Local Government Board for Ireland has now refused to sanction the appointment.

refused to sanction the appointment.

The United States Government is considering a series of road experiments, the results of which are to be used to determine an engineering formula for vehicle taxation-based on the road destructive effect of all types of vehicles. The aim is to obtain a universal formula on which to base taxation, that a uniform tax may be established, each vehicle being levied so much per year according to the amount of damage, i.e., road weat, it causes, so that sufficient money will be available to build highways of the standard now required by the newer and faster traffic. now required by the newer and faster traffic.

# THE INFLUENCE OF AERIAL WAR-FARE ON ARCHITECTURE.

A fortnight ago we offered hints likely to be of use under present circumstances for mitigating the effects of bombs on existing buildings. But it is evident that war is: the air is a factor to be reckoned much more seriously with by architects in the future, Special conditions and unforeseen circumstances have always produced specific types of architecture. The embattlement, the most and drawbridge, keep, machicolation, and portenllis were the outcome of ancient warfare. The Swiss châlet roof is the defence against the avalanche. Not so long ago we were all discussing start-off platforms on our roofs to accommodate the then novel aeroplane. We way have in the man future to round may have in the near future to regard turrets and gables as mere "peace fixtures," clearing, in time of war, the roofs for action, outspanning bomb-proof nets, and betting down débris screens.

Either the future building must be bomb-

proofed on some permanent lines resulting

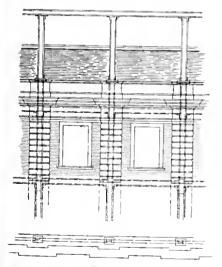

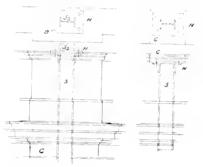

FIG. 1.

in the modification of architectural planning and construction, or we must rig up tem porary defences. Can temporary defence be considered all-sufficient and as effective as the more radical amendment of constructive method? Must we have steep-pitched roofs, more than 40 degrees to the normal, of genuine armour-plate, with steel framing and principals after the model of the ribs of a ship, and generally strengthen our steel construction? Or can we still trust to sand and slag-wool and stout steel netting? Or nust we burrow in the earth and live like noles, ringing up the lift man rather to take is below than above?

In potential fire cutbreak we have a peranent factor of danger; yet we do not ll, by any means, live in fire-proofed buildings. We risk structural injury and insure gainst financial loss. A man might now onceivably construct a bomb-proof platform

earth like hunted foxes. The concern of his architect, therefore, is likely to be rather with quasi-temporary devices than with permanent and radical amendment of design and construction.

But in the near future, as we have said more will be asked of us when designing new buildings. It would be, structurally, quite easy, even it it involved a little extra expense, to arrange either our array of strong steel and girder tie heams differently, or to devise better support from foundation to copings. Our general system of steel-framed construction well lends itself to some met sod of forming sockets and baseplates for stan chons for a bomb proof gantry, designed by experts at the same time as the main bining ing is planned by the architect. At present in general planning we arrange for a comparatively light roof. In planning on the assumption of aerial warfare, we should arrange the supports of sufficient increased strength for emergency duty, and see that the steel training was efficient and that any impulsive stresses were properly received

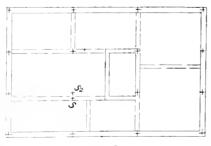

FIG. 3.

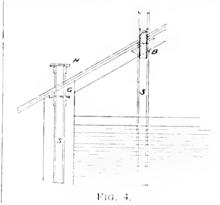

and distributed. These are portending advantages in the quast of istic horizontal homo-receiving screen, because whereas this might be arranged—as by means of strong vertical dwarf screens—to prevent the reflex of dissection of a received premises, where we

#### Strand, W.C.

 $\frac{OUR-ILL!-ILATION}{1+1-1-1}$ 

over his house, but he elects to hazard his life and pay the Government 5s, per cent. He will therefore smile at us if we compressing the up visious of buildings like up ended battleships or Eddystones heavily mail clad, and refuse to believe that we shall be driven to believe that we shall be driven to be us regulations in this matter would be desirable from authorities. It is possible, therefore, that the influence

It is possible, therefore, that the influence of actial warfare upon building design may be partial only, and may dictite the adopbe partial only, and may dictate the adoption of permanent anchorage for emergency fittings—means to which, in time of war, actual defensive devices could be secured, whether in the form of amount plate tood covering or wall-screen, or as an array of eyelets or base-plates whereto may be at once holted suitable stanchions and homb-proof covering. Fig. I is a plan and super imposed elevation of the upper part of a building, showing an ordinary arrangement of steel framing; but instead of the stan-chions stopping at the ceiling level of the uppermost story, they are continued up as permanent construction to the coping level,

there having baseplates all ready to bolt the stanchions indicated, as temporary defence fittings, to carry the beam shown above read level, thus forming an outline of the steal training necessary to take a bomb proof platform. Fig. 2 shows the balustrade and coping to enlarged scale. The stanchion, 8, continued above the girder, G—where, say, in the ordinary manner of building as world stop—runs through the blocking corse, and finishes with a head plate, H, we stop level of the coping. This has holes we holds, B, etc. ready to seemely and a the emergency stanchions, 8. A coordinate could be fitted to maintain the best-plate out be at the lower surface of the coping stone, as shown in the alternative sixed on regardance of diagram. In this case the length of coping, C, would be treated much with the same idea that we form strucktion in this brickwork. It would preserve the biseplate and he is made an amore new 400. there having baseplates all ready to holt the brickwork. It would preserve the biseplate and be removed on emergency. On this system the nature of the special planning required by the architect might be put hagrandmatically. Let Fig. 3 represent the plan of a proposed building, the crosses indicating stanchions. All as planned would roofs reinforced by steel if they are to offer let us suppose, suit a scheme of defence, excepting in the case of S. We might say.

It is also interesting to record that in a fire that some slight modification of arrangements, as moving 8 to 8, is the work and thought demanded of the architect to enable possible future building protection to be securely and economically provided. At times, it is conceivable, some support directly over a pitched roof might be required. In Fig. 4 a suggestion is made that stanchions, S. might be permanently built into walls, mushed as H or as G or B, in which event small parts of the roofing would require to be removed when bolting up emergency stanchions. At P the suggestion is for a fish plate connection. It would seem that, under the general scheme, the matter of arranging support for emergency stauchions above a roof is a comparatively small affair of foreseen in planning.

If it can be shown that the best protective method is likely to be based on such lines as we have last suggested, then the modification of architects' plans will be a comparatively small matter; but our impression is that more will be required of us at an early date, at any rate in the design of hundangs of national and public importance.

## MESSRS, BECKETTS BANK, DONCASTER,

---

This illustration represents security work recently fault by the Rather

It is also interesting to record that in a fire caused by a recent visitation of hostile air craft there were four Ratner safes, all of which preserved their contents perfectly.

In addition to the magnificent strong-room. illustrated above, we are informed that the Ratner Safe Co., Ltd., have recently com-pleted the following important contracts:—

A triple steel and girder strong room of exceptional design for the Huddersfield branch of the West Yorkshire Bank; two steel strong-rooms made on the same special twelve-corner bent principle as Rather safes, for the new Durham Miners' Hall, Durham: and a massive steel sate deposit—designed to contain 2,068 small safes—for Messrs. Selfridge and Co., Ltd., the well-known London stores.

Naturally, the war has caused a pause in the placing of such orders as the foregoing, but, nevertheless, Messrs, Ratner tell us that. owing to the number of their staff who have owing to the number of their staff who have poined the Forces, they have found it as much as they can do to keep pace with the orders they are now receiving from the Government, bankers, and private buyers. Since the outbreak of hostilities they have received orders for some 700 safes for Army use, and there are now considerably over 200 of their special "Paymaster Safes" on board H.M. battleships. Only last month 140 Ratner safes were ordered for the War Office.

BUILT BY RATNER SAFE CO LONDON

SECURITY WORK BY RATNER SAFE CO., LTD., IN MESSRS. BECKETT'S BANK, DONCASTER,

Safe Co., Ltd., from designs and under the supervision of Mr. W. H. Brierley, F.S.A., F.R.I.B.A., county architect of York. The builder's work was carried out by Mr . Anelay, of Doncaster, who made himself responsible for all the concrete walls, interwoven with steel girders, etc., on a special principle designed by the Ratner Safe Co.. Ltd.

It will be seen that the room is built with a patrol all round, which on two sides is used for the storage of books, the entrance being guarded by an additional strong-room door. The roof is of double formation, being specially strengthened to take the floor of the The doors are constructed of a patent combination of metals, designed especially to resist every known means of attack, including the oxy-acetylene blow pipe, having a thick-ness of at least 5% inches over the locks and other vital parts.

The construction is such that it would seem that the contents could not, under any circumstances, suffer damage at the hands of burglars or through the ravages of fire, or even hombs from a Zeppelin. As to the even nooms from a Zepperin. As to the latter risk, which is one that merits the most serious consideration of all having the listedy of vulvables. Messrs Ratner point out that all strong rooms should have their

The decision of our referee announced on page 374 of our issue of October 6 has been hallenged with regard to the respective posi tions of the second and third prize-winners: and, we find, rightly.

On a recount we find that "Walbroke" Mr. W. Brooke, care of Messrs, R. Castle and Son, architects, London City and Mid-land Bank Chambers, Cleckheaton, Yorks) was wrongly credited with having scored first was wrongly credited with having scored first place on one occasion. The positions, therefore, of "Penwith" (Mr. J. Clark, care of Messrs, Cowell and Drewitt, Lennard's Chambers, Penzance) and "Walbroke" must be reversed, as "Penwith's" record is 18 points against "Walbroke's" 14 points.

The prize-list will therefore stand as follows:—

Iows:—
First prize of £10 10s.: "September
Morn"—Mr. H. W. Smith, care of Mr. E.
W. Allfrey, M.A., 57, High Street, Oxford.
Second prize of £5 5s.: "Penwith"—Mr.
J. Clark, care of Mossis, Cowell and
Drewitt, architects, Leunard's Chambers, Penzance.

and Son architects, London City and Midland Bank Chambers, Cleckheaton, Yorks.

Hon, mention is awarded to "Why" and " Bournemouth Queen."

Cheques for prizes, after verification, will be forwarded about October 30. Any alterations in the addresses of the prize-winners are, meanwhile, to be sent to the Editor.

#### THE LONDON COUNTY COUNCIL.

The meetings of the London County Couneil were resumed yesterday (Tuesday) after the summer recess. The Finance Committee the summer recess. The Finance Committee recommended that sanction be given to the Lorrowing by the Lewisham Borough Council of £1,577, repayable on the annuity system within sixty years, for the purpose of a contribution towards the cost of street improvements in Bromley Road, London Road, Devonshire Road, Waldram Road, Stanstead Road, Catford Hill, and Catford Road, now being carried out by the Council. The expenditure was wholly incurred before March 31 last, and the Treasury raise no objection to

the borrowing.

The General Purposes Committee reported that Mr. Herbert Edwin Bailey, of the unestablished staff in the Architect's Department, a private in the 5th Battalion Seaforth Highlanders (Rossshire Buffs), has been killed

in action.

The same Committee reported that Mr. Cyr.l S. Cobb. Chairman of the Council in 1913-14. who bore the entire expense for providing the Council with a coat of arms, has intimated his desire to present to the Council a banner embodying their coat of arms, and the Rev. E. E. Dorling has been consulted as to the design. Recommending that the offer be accepted, the General Purposes Committee pointed out that there are many occasions of purely municipal importance when the flying of the national flag at the central office of the Conncil is inappropriate-events such as the anniversary of the first meeting of the Council, and ceremonial occasions when no member of the Royal Family is present. The Education Committee reported that

The Mr. G. Gummer, head of the art department of the Shoreditch Technical Institute at Hoxton, has submitted his resignation, having obtained a position as inspector under the Board of Education. They recommended that Mr. B. C. Hastwell, lecturer in art at the Islington Training College, which was closed at the end of the snmmer term, 1915, now be transferred to fill the vacancy at Shoreditch at his present fixed salary of £320 a year. They further recommended that means of escape from fire be carried out at the premises of the Cordwainers' Technical College, Bethnal Green, at a cost of £315, these works being absolutely necessary. It was reported that the building of a new school in Cork Street. North Camberwell, for which Messrs, J. Marsland and Sons are the contractors, is approaching completion.

The Building Act Committee reported that the Local Government Board has allowed the regulations made by the Council on July 6 last under section 25 of the London County Coun-cil (General Powers) Act, 1909, with respect to the construction of buildings wholly partly of reinforced concrete and with respect to the use and composition of reinforced con-crete in such construction. The Board has crete in such construction. The Board has fixed January 1, 1916, as the date upon which the regulations shall come into operation.

The Improvements Committee recommended the Council to let on a 99 years' lease to Messrs. Perry and Co., at a rent of £200 a year, a site at the corner of Horseferry Road and Dean Bradley Street. The site has an area of shout 4,050 square feet, with frontages of about 48 feet to Horseferry Road, 103 feet to Dean Bradley Street, 30 feet to Romney Street, and 105 feet to Carpenter Street. The condition is made that in the event of Car-penter Street being closed, the lessees are to have half the width of Carpenter Street included in their lease without further pay-

The Parliamentary Committee that the London County Council (Tramways and Improvements) Bill, 1915, has been con-Third prize of £5 3s.: "Walbroke"—
Mr. W. Brooke, care of Messrs. R. Castle of Lords, presided over by the Marquis of

Bristol. Tramways Nos. 2 and 2a, commenc ing at the existing terminus at Aldgate, passing through Mansell Street and across Tower Bridge Approach, and terminating by a single loop line round Trinity Square, together with the reconstruction of a short length of the existing tramway in Whitechapel High Street, which had been passed by the House of Commons, were again strongly opposed and were rejected. The Home Office report contained cruicisms of tramways Nos. 4 to 4c (Mare Street to Terrace Road and Church Crescent, Hackney) and of the proposal for the reconstruction the existing tramways in Grange Road, Bermondsey. The Bill was recommitted, but after hearing evidence from the police and from the Council's official, both schemes were passed. There were no petitions against the remaining parts of the Bill.

The Building Act Committee stated that they had consented, under Section 142 of the they had consented, under Section 142 of the London Building Act, 1894, to the appointment of deputy district surveyors in twenty cases. In order to fill temporary vacancies for district surveyors the committee had appointed Mr. A. G. Morrice, district surveyor for Streetham Fast, to be interim discovered for Streetham Fast, to be interim discovered. veyor for Streatham East, to be interim district surveyor for Streatham West; Mr. R. Davidge, district surveyor for the district of Lewisham, to be interim district surveyor for the district of Woolwich; Mr. H. T. Bromley, district surveyor for Whitechapel. Bromley, district surveyor for winteenaper, to be interim district surveyor for Bethnal Green West; and Mr. E. W. Knight, district surveyor for Bromley, to be interim district surveyor for Poplar All Saints. Each of trict surveyor for Poplar All Saints. the appointments dates from October 1, 1915, and will continue during the pleasure of the Conneil The committee adopted the course of appointing existing district surveyors tem porarily to these positions, as they thought it unwise to recommend the Council to appoint any new district surveyors during the 1,002 notifications have been received during the recess with regard to structures which were alleged to be in a dangerous state. In 115 cases it was found that structures were not in a dangerous condition, and consequently no further action was necessary. In 887 cases notices were served upon the owners requiring the removal of the danger. In order to secure compliance with the Council's notices it was necessary in some cases to obtain orders from the magistrates, and in thirty-six cases in which such orders were not complied with the committee arranged for the Council's contractors to take down the dangerous portions of the structures. As a temporary expedient they arranged for forty-eight structures to be shored up or hoarded in by the Council's contractors.

### REINFORCED CONCRETE SEWERS.

The results of tests recently made upon reinforced concrete pipe for sewers by Mr. A. T. Goldbeck, assistant engineer of the testing laboratory, Bureau of Surveys, Philadelphia, are described in a paper presented the American Concrete Institute. The author's conclusions are as follows :-

---

1. Reinforced concrete pipe, when properly made and properly cured, is very satisfactory for the construction of sewers.

2. The use of a concrete cradle greatly increases the stiffness of the pipe, and rate of the load under which initial cracking takes place.

3. For sections of the size tested and for

load under which initial cracking takes place.

3. For sections of the size tested and for smaller sections, the placing of the reinforcing near the inner face throughout the entire circumference seems to be justified.

4. The matter of curing should be very carefully controlled, as much stronger pipe will result if care is taken to keep them theroughly wet, preferably for a period of two weeks. Finally, the manufacture of concrete pipe should be much superior to that of ordinary construction. Not only should the quality of the available material be carefully investigated, but density tests should be made in order to combine these materials in such proportions a produce the densest possible concrete Density and clastic strength are absolutely recessary for good concrete sewer construction. -د--

The Hawarden memorial to the late Mr. W. G. C. Gladstone, M.P., will take the form f the replacement in the parish church of he rood beam, cross and figures.

#### THE PHOTOGRAPHY OF CHURCH INTERIORS.

Churches may be divided into two . There is the church that is the design of one There is the enurch that is the design of one man, and forms a complete work of art in itself, such as S. Pani's, St. Peter's, and numerous smaller churches among which Wren's are prominent. Then there is the church that has grown up by instalments, as it may be expressed, where various architects have had a say in the design at different periods, and that possibly represents the various types of design that prevailed during four or five centuries. Many such examples exist in our old abbey churches and ministers, and in most cases these can only truthfully be described as collections of works of art, not as complete works in themselves. This peculiarity must be allowed for when photo graphing or sketching such buildings, but it will be sufficient for us to confine our atten tion to the former class, which are complete in themselves and not confused by the addi-

tions of various periods. One obvious way in which a church differs from a private house is that it forms practically one chamber alone, and is not cut up into a multitude of small portions, but if we compare this one large chamber with other erections that are similarly units by themselves we find very important differences. church has one definite point of focus which governs the whole of the design, whereas the private large chamber, be it ball-room, pic ture gallery, or what not, has no such focus The focus point in a church is the altar, and in a well-designed church the whole design is controlled by the purp se of leading the attention to and fixing it upon the altar. a church interior the altur fulfils the same purpose as the point of interest in a well composed picture, while, further, just as a picture is arranged by the painter to repre sent the subject as seen from some one par ticular view point, so the church is designed from one particular view p int, from which point alone can we see exactly what the designer wished us to see; that is, the d. sign at its best. To put all this into other language, we may say that while the private bull-room will have no one special point of interest, and will be designed as far as possible so as to look equally well from any where, the church has one dominant point of interest, and also has one particular view point from which the design as a whole looks at its best.

Inasmuch as the whole of the interior cannot be seen from one point, it follows that there are subordinate points of view from which parts of the whole should be studied. but if the photographer does not know the general principles of church design he is never likely to hit upon the best points, while in some cases mi caken ideas and projudes will cause him deliberately to avoid them.

There are three general principles by which the architect is guided in the attempt to compel attention to be focussed on the altar, all three being also more or less the same as those which serve as guides to the picture painter. In a really fine, well designed church it will be noticed that many horizontal lines are introduced, all leading apparently to wards the alter. Also that the design be comes more refined and more ornate nears the altar end, and, finally, that the two sides of the church symmetrically correspond. so that neither passesses special interest attract the vision from the centre focus, one point from which all these features is most manifest is the central west door of the church, which is also the main roint of view from which the church as a whole was designed to be seen. In some cases the view from this point is so striking that the church looks like a different building to any one who has only seen it before from inferior stand-points. St. Paul's is a case in point, and it can truly be said that anyone who has never entered St. Paul's by the great central west door has never really seen St. Paul's at all. Unfortunately, opportunities of doing so are rare, and even in minor churches there is

\* From a valuable article in the British Journal of From a warm arrive in the Bottsh Journal of Photography, which we commend to the attention of our own readers, to whom we are often indebted for photographs which we could sometimes wish were capable of better reproduction. often difficulty in getting the opened, while entering a mewiore ease and walking round the view point does not give at all the same impression.

This is the first view that an archite throng for, and in order to get it as a first angression he will often pay the verger hand-omesy for the privilege of getting the west door opened, but it is, as a rule, the last year that the photographer will present him with, and when the photographer does produce it generally found that he has epoilt the effect by making his expesure, not from the west door but from some point well to one side of it, thus destroying the perfect symmetry and knocking out one third of the emphasis that the designer tried to produce. Some photo graphers have a foolish prejudice against symmetry at all, not being able to realise that in some cases, though not in all, perfect symmetry is an ideal condition. In the palatial ball-room, designed to look well from anywhere, we do not want a symmetrical view, because it will divide the interest and spoil the picture. In the church view from the west we do wars it, because it helps to concentrate the interest on the one right point, whereas anything that detracts from perfect symmetry diverts the interest and spoils the concentration. In some (' ntinental churches the symmetry is obviously spoilt by the importation of large and ornate on one side of the nave. These are often very fine things by themselves, In their effect in detracting attention from the main point of interest is very marked. When no such disturbing feature exists a remarkable effect cun sometimes be obtained if we take up cut sometimes 12 of tained if we take up various points of view at the west end of the church. On walking from one side to the other, looking east all the time, it may be noticed when we reach the central position that the general design of the building events to come together, with a snap as it were, and becomes complete. The effect is like that sometimes obtained when searching for the best point of view in a landscape. Suddenly, at one place, everything looks perfect, though at other places some defect in the composition is quite noticeable.

The west door is the principal point of view for the design as a whole, but as we advance up the church new points are advance up the church new points are reached from which smaller parts of the design are seen. The altar becomes more and more prominent as we approach it, and claims attention on its own account, wherefore we are no longer so dependent on other factors for emphasis. Moreover the design is becoming more ornate as the simplicity of the nave is left helind us, and a too symmetrical view may soon tend to scatter interest by the claboration of detail on all sides. At the west end the opposing sides of the nave are of simple design, and symmetry has no disadvantages, whereas at the east end the design may be too elaborate to render perfect symmetry advisable. There is, however, usually one good view point at the centre of the top of the chancel steps, this being another point of view specially cors'd red by the architect.

In the transepts symmetrical views should generally be avoided, the design being very often non-symmetrical, while there is to special point of interest in feets. The astern transept wills are generally designed to be seen from the nave, and therefore in conjunction with the chancel. The western walls, on the other hand, are often designed to be seen together with the nave from the east. and are then much more simple. Sometimes the walls are designed in unison, but there is usually little interest in either transept, and there is no specially designed view point. Cross views showing the merging of the design of chincel or nave into that of the transepts will, however, generally be of interest to architects.

Views looking west, away from the cital are usually devoid of any smelal interest. view from the immediate front of the altar will, however, often be of considerable in-terest from the purely architected plot of

Practically what the ar hiteet wants is the important view from the west door showing the general design and the way everything tends to lead attention to the alter, and a

## REINFORCING CONCRETE COLUMNS

TO CARRY ADDITIONAL STORIES.

It was incressity to resort to a somewhat sua, method of construction in the addito a state increase of construction in the addition of the Washburn Crossly Co. mill in Minner to s. Mann. This structure was one of the first near forced one tete buildings erected in the staty, and covers an area of 60 by 78 ft. is five stories high, has brick-bearing als strengthered by brick phasters and six The construction is of the girder type, 6 in this with two way reinforcement. The wall stings went down to bedrock, about 9 ft. slow grade, but no accurate data could four I regarding the size or depth of the x column footings. On figuring the old structure, the writer found that the concrete dimins were not of sufficient strength to arry any additional stories; they were actutoo weak for their present requirements Norther was the roof-slab, of course, strong or agh to be utilised as a floor. In fact, the only parts of the building that would steed a bintonal loading were the walls.

Another condition that added to the diffi uity was that neither the continuous use of the elevator nor the lower four floors of the

HALF SECTIONS THROUGH COLUMNS, SHOWING METHOD OF REINFORCING.

hand ug a uld be interfered with, and as the floors were used for flour storage, it was essential to guard against leakage. Obviously the first step was to examine the column floorings, to see whether they rested on hedron and were of sufficient size to carry the and were of sufficient size to carry the iditional load. They were uncovered, and nys of them were found to go down to the limestone ledge, while the sixth one rested on a layer of shale about 13 in, thick. To sceare solid bearing this footing was plugged in sections of about 1 ft, width, and in that way carried to the ledge. All them we e in good condition and of ample

As the old concrete columns could not be silised, it was decided to transmit the load if the new stories to the footings by means structural steel members built around the of structural steel members built around the old columns. Four holes were cut in the floorslabs at each column and 4 by 4 by 3 m. angles lowered down from the roof to the fectures. They rested on a structural-steel base, made in two parts and holted together. The angles were connected by 3 to set with states every 6 in alternating, 5 in the sections of the original columns at the teachers floors, where the original columns the strews 1 or 2 used for connections at the two lower floors, where the original columns tere 18 m, square, and fedus on the upper the floors, where the old obtains were 2 in smaller. After the angles were contected up. No other the angles were contected up. No other the angles were contected up. No other the angles were contected up. ### -NEW APPARATUS FOR DETERMINING FINENESS OF CEMENT.

Three years' experiments, intended to produce a means of determining the exact fineness of cement, have resulted, at the U.S. Bureau of Standards, in the developing of an apparatus which is effective for this purpose. In the manufacture of Portland cement. In the manufacture of Portland cement, clay or shale and limestone are ground together and "burned" in notary kilns. The cement comes from the kilns in the form of hard, black, semivitrous lumps, or "clinker." When pulverised, this clinker becomes a greyish powder, which is the familiar article of commerce employed for a great variety of purposes in practically every type of building construction.

It has long been known that the fineness to which the cement is ground is one of its most

which the cement is ground is one of its most important characteristics, and consequently specifications require that 75 per cent. or more of commercial cement shall pass through a No. 200 sieve, which has 40,000 openings per square inch. This is the practical limit

of mechanical sieves in respect to fineness.

It is very important to have some means of measuring directly the entire state of subdivision of cement : in other words, to discover just what percentage of the material is made up of particles of certain definite sizes. If such a division can be made, it should be possible not only to compare the efficiency of different grinders, but also to determine what degree of fineness must be attained before the cement becomes "hydraulically active"— that is, capable of combining with water to form the binding material in mortar and

The apparatus devised by the Bureau of Standards consists of a vertical brass pipe about 3 in. in diameter and 5 it. long. at lower end of which is attached a glass bulb, in which the cement to be tested is placed. Air at constant pressure is blown into the cement through a glass tube or nozzle in the side of the bulb, and as the air can escape only through the vertical stack, air can escape only through the vertical stack, it carries with it the cement dust, which is caught in a flannel hood surmounting the stack. The air-flow in the stack is very uniform, and in a short time all the dust will be removed from the cement, leaving a granular residue in the glass bulb. This residue is weighed, and the amount of dust is determined by subtracting the weight of the residue from that of the original sample of cement. Different grades are obtained by cement Different grades are obtained by using different-sized nozzles, and thus a number of separations can be made in the very fine portion of the cement. With the aid of the microscope the size of the largest and of the microscope the size of the largest particles in any given separation can be readily determined, and in this manner the apparatus is standardised without reference to the size of the nozzles and other parts of the apparatus or the air-pressure used.

It is found that the cement "flour"—that is the apparatus of sement which contains ""

is, the portion of cement which contains no perceptible grit when rubbed between the fingers—consists of particles less than 0.007 io. in diameter. The apparatus is called the air analyser, and may be used for separating and grading any hard-grained materials, such as ground quartz, emery, and other abrasives. The air analyser in modified form is also capable of separating many other powders—for example, paint pigments, plasters, clays, and similar materials.

At a private meeting of the Hampstead Town Council on Friday for the purpose of selecting a mayor, Mr. Charles Bean King, who was eighty-two years of age, suddenly collapsed when making a speech and died almost immediately in the mayor's parlour-fle resided at Frognall, Hampstead, and was head of the building firm of Messrs, C. B. King, Limited, of Church Row, Hampstead.

of October last year. He went to the front early in July. Privat - Leslie theorge Whithread, 6th Bat

THE RENAISSANCE MASONIC LODGE BANNER.

The emblematic flowers used in the ornament are the rose, the lily, and the iris. The general scheme of colour is that of pale blue and silver grey, relying upon the varying textures of silk, satin, velvet, and metal silver to give all the richness of effect desired.

As a central point of interest a slightly contrasting note of colour is given in the rising sun (symbolical of the Renaissance). rising sun (symbolical of the Renaissance), which is in pale gold satin. The lettering is marked in golden brown silk, as also the flower centres. The fringe and well-designed side tassels in silver grey silk give the finishing touches to the design. As stated in our last issue, the banner was designed by Mr. Arthur Wilcock, and presented by Mr. A. S. Jennings.

appliqué and embroidery in shales of silver record of the elevation is kept on 7 m. by II-in, sheets which give the plan of the building and a description of the benchmark. Whenever levels are taken on a building a Whenever levels are taken in a doming a record is made on the sheet, and the differences are noted. There is a general sheet for each building. A sheet of similar form is used for elevated rulway columns.

In addition to fixing the elevation of some that the sheet of similar points.

permanent mark on buildings and elevated railway columns, these structures are plumbed so that the movements due to construction can be detected. An auxiliary base-line is run close to the buildings, and sights are taken with a transit to points on the top and bottom of the structure. In the case of buildings marks are cut on the wall as near the roof and as near the pavement as possible, and sometimes at intermediate points, and a record made of the reading from these points. record made of the reading from these points!

Boon and Sons.

## Correspondence.

MISSING JACOBEAN OAK BENCH. STEYNING CHURCH, SUSSEA.

The Edit of of The Building News

Str.-1 hasten to apologise for saving Mr Pridge n was inducted to Steyning in 1879. The Cergy List gives this date as the year the Correct fast gives this unite as the year of his ordination, and also records the fact that three years subsequently he was ap-pointed to the cure of Steyning. The publication in your pages of the sketch of the missing carved bench in question occurred, therefore, ten years prior to his incoming in 1882. I do not happen to know exactly when the ugly deal colleries and lox-like pews were to move from this church, but, if my memory serves me rightly. I saw there a few weeks ago the name of the vicar (when this clear ang out took place) inscribed in clear, con specia as lettering on the wall of the south ussle, and it was this inscription which gave me the impression that it might have been put up as a memorial to a beneficent departed parish priest who had helped to improve the Iniding by disencumbering the beautiful arcade of the Paritan galleries, the removal of which I so approvingly mentioned. Whoever the architect employed may have been—and I have no notion whom he was—he certainly ought to have looked after the preservation of this quaint old seat if it then existed in the church: but Mr. Pridgeon who I now gither church: Eut Mr. Pringeon who I now gamer was vicar at the time doubts if it ever did exist, and he adds that after full inquity he can had no one left in the parish who remembers anything of the kind. This is quite likely, for ordinary folks know so litt such things and perhaps care less. The bench was only a sample of Sussex vernacular work, but art nowadays has receded away from life.

I find you published an article on page of your journal for September 20, 1872, which is descriptive of a visit by the British Association to Stevning on August 17 that year, when the writer says he was met by the vicur, the Rev. T. Maitland. General partichlers as to the styles and dates of the charely are furnished and mention is made of this oak seat as being poked away in the tower. The illustration of it, which I previously alinded to, will be found in your issue

fer February 25, 1872.

In corroboration of the above I see that in the following number (March 1, 1872) a wellknown correspondent of The Building News at that time, Mr. W. F. Potter, wrote confirming what Mr. Maurice B. Adams had directed attention to (when his drawing appeared about the neglected condition of this interesting bench-ended settle. Mr. Potter, however, roundly blamed the Sussex Archaelogical Society for allowing such negligence. Really the purson and churchwardens were primarily at fault, as they are the legal cus todians of all trustee property owned by their parish church. However, Mr. Potter apparently had some experience of archeologists, and he suggests that the use of such hodies "seems to consist in occasionally going antiquities and eating a to look at dinner." In Sussex, so rich in old buildings and works of art, they treated such things and works of art, they treated such amogs with indifference and ne elect for long years, and he names specially Hastings Castle. By way of a similar example of wanton disregard of old church furniones Mr. Potter tells when visiting Guesting Church, in the same county, to see the famous Flamboyant or Flem.sh richly traceried and ornamented oak chest, which is illustrated in Parker's "Glossary," he discovered that it had been "recently destroyed," and be found the only single remaining panel, "like our friend at Stevning, stowed away in the tower," Not even the oldest inhabitant in Guestling, I'll he bound, could now testify, if inquired of by the vicar, that such a chest ever existed by the vicar, that such a chest ever existed it has give for avel. I may refer to one very notable case of this sort, because it concerns the magnificent lectern at Detling, in Kent. perhaps the most beautiful piece of furriture of its kind in England. It is still in a fine state of preservation. During the

when the Gothic chest at Guestling was broken up and the Jacobean settle at Stevnbetting, finding himself in need of funds, carted away this lectern, and it was subsequently found in a dealer's store at Maid-stone. From thence it was fortunately recovered and reinstated in Detling Church. The rector told me about this, and he knows how to estimate such things held in trust for the parish and the Church as a whole.

Steyning Church is illustrated in Britton's "Ancient Architecture in England," and by Mr. F. L. Griggs in "Sussex Higaways and Byeways," "The Brotherhood Hall" in "Churche Street," Steyning, figures in The Building News for September 20, 1872, from the pen of Mr. Maurice B. Adams. The windows shown by his sketch to the first floor have since been removed, vastly to the improvement of the external appearance of the build ing, which is uncommonly picturesque. The now dirty whitewash applied to the old now dirty whitewash applied to Sussex brickwork found about the arched entrance is a sad disfigurement and most objectionable. I do not know who is responsible, but someone with a little enterprise might get this washed off and the Brotherhood Hall brushed up a bit, but not restored or modernised, like "the old post office" at the other end of the town.—I am, etc., October 8, 1915. A Susse

## WAR DAMAGE A NATIONAL RESPONSIBILITY.

A Sussex Man.

-The Government insurance scheme which has made the individual citizen responsible for war damage is so manifestly unjust that we may reasonably hope that it will soon be abandoned.

The Army and Navy are maintained for the defence of the citizens and their property. In so far as they fail to give complete protection the community as a whole should compensate those who suffer damage, whether be freeholders, leaseholders, house

holders, or lodgers.

Prior to the Government insurance scheme. sufferers from air raids and bombardments on the East Coast were, properly, compensated out of national funds, on the same principle that residents of a police district compensated for damages resulting from failure of the authorities to give complete protection in the case of riots

The Riot (Damages) Act, 1886 (49 and 50 Vic., C. 38), provides in Section 2 as fol-

Where a house, shop, or building in any police district has been injured or destroyed. or the property therein has been injured. stolen, or destroyed, by any persons riotously and tumultnously assembled together, such compensation as hereinafter mentioned shall be paid out of the police rate of such district to any person who has sustained loss by such injury, stealing, or destruction; but in fixing the amount of such compensation regard shall be had to the conduct of the said person, whether as respects the precaua party or accessory to such riotous or tumultuons assembly, or as regards any provocation offered to the persons assembled or otherwise.

This question of war damage seriously affects the whole community, and if not dealt with in an equitable manner will add to the necessary evils of the war untold suffering on the fering on the part of those citizens who happen to be hit by the enemy in their attack on the nation. Once recognise that war damage is a national responsibility, and it war becomes clear that all insurance schemes are out of place, and that an Act should be passed for compensating all citizens injured in the person or estate by the enemy.-Yours, MARK H. JUDGE AND SON,

Architects and Surveyors Pall Mall, S.W., October 9, 1915.

[We entirely agree, and said so some months ago. See our remarks on p. 78 of our issue of July 21 last.-En., "B.N."] ---

furriture of its kind in England. It is still in a fine state of preservation. During the in the case of Ernest Schaufelberg, Lombard last century, and quite likely about the time! Street, E.C., architect,

THE ARTISTS' RIFLES.

The following appears in the current issue of the A.A. Journal

I have received a letter from Lieut.-Colonel May, C.B., the Commanding Officer of the May, C.B., the Commanding Officer of the 1st Battalion, Artists' Rifles, in which he says: "You probably know that on arrival in France" (in November last) "the Artists' Rifles were given the task of training and supplying young officers to the British Army, especially Regular units. I send you a roll showing you what the Corps has done in this direction which may interest you, and from which you will see that we have supplied 1,500 young officers (some to every Regular Infantry Regiment in the British Army) besides Machine Gun Instructors and others, so that I think we may feel that the 50 years of pre-paration has been justified. Colonel May says he gets "splendid accounts" from the O.'s of his men, and they all ask for more. The roll is most interesting, as it contains the names and rank, etc., of those members of the Corps who have been appointed officers, and I have had a copy sent to the office of the A.A., where it may be seen by any of our members.

As many of our members are in the Artists' Rifles (a number which will no doubt be largely increased during the war). I think the readers of the Journal will like to know of the good work the Corps is doing in France,

The intensely interesting notes by Lieut. W. H. Ward, published in the last issue of the Journal, and his account of his meeting with a brother "Artist" at "Anti-Krupp Villa" in the trenches, give one a good idea of the spirit of the men in the old Corps.

GERALD C. HORSLEY.
Past President.
P.S.—Copies of the pamphlet 16d. each to cover expenses) can be obtained on personal application at any Orderly Room of the Artists' Battalions or by remitting cost to the O.C. Administrative Centre at the Regimental Headquarters.

Second-Lieutenant F. G. Sainsbury, architect and surveyor, of Friar Street, Reading, has been selected by the War Office for the Royal Engineers, and is now in France supervising defence works.

A brass tablet erected to the memory of Cap-A brass tablet erected to the memory of cap-tain H. R. S. Pulman has been fixed in the vestibule of the Council Chamber at West-minster Cuy Hall, Charing Cross Read, and will be unveiled by the Mayor to-morrow (Thursday) afternoon

At the urban council's office, Northallerton, on Wednesday, Mr. P. M. Crosthwaite, C.E., an inspector under the Local Government Board, held an inquiry into the further application for an additional sum of £10,000 in respect to the expenditure on the new water-weeks at Osmorberlay in the area of the respect to the expenditure on the new water-works at Osmotherley, in the area of the rural council. Mr. E. Sandeman, the water-works engineer, outlined the new works and mentioned details of the expenditure, together with the unexpected difficulties which had arisen which necessitated the further borrow-ing powers.

By ballot the members of the Amalgamated Society of Engineers have decided to secode Society of Engineers have decided to secede from the General Federation of Trade Unions, and the requisite six months' notice has been given by the Executive Committee. The A.S.E. has a membership of 200,000, of whom 20,000 are abroad. The ballot figures were: For secession, 16,075; against, 14,259. Mr. Young, the general secretary of the society, gives as the reason for the secession that "the mumbers no longer wish to belong to a financial mumbers no longer wish to belong to a financial members no longer wish to belong to a financial federation like the General Federation of Trade Unions, but wish to huild up a fund of their

Mr. Hubert Hall, F.S.A., Assistant Keeper of the Public Records, in the course of a lecture on Monday night at the London School of Economies, Clare Market, W.C., on the archives of England and Wales, remarked there was a great opening during the war for the employment of women as archivists. He haved to see at least one woman in every office the employment of women as archivists. He hoped to see at least one woman in every office for the preservation of public records. Sir Laurence Gomme, who presided, said that the local records of this country were as valuable as the national records. In the sixties the records of Weymouth were discovered in an auctioneer's catalogue, but fortunately the cale was stopped. It was distressing that so many public authorities continued to neglect the valuable degenerate in their possession. able documents in their possession.

## Currente Calama.

Great lawyers seem to us strangely unacquainted sometimes with stubborn facts, which are palpable to most of us, whether we are landlords or tenants. Among other suggestions to the Government how to tax us more, Sir Edward Clarke, K.C., says in a letter to the Times of Saturday last :-

the Times of Saturday last:—

There is another matter connected with the incometax to which I should like to refer. It is one in which the State is deprived of payments which it is by law entitled to receive. As the law stands, the tenant who pays an annual rent . . . is entitled, and indeed bound, to deduct incometax. He does, but in the enormous macrity of private transactions he keeps the money himself and never pays it over to the Treasury.

As mere tenants we should really be obliged to Sir Edward Clarke if he will introduce us to a good landlord who will allow us to deduct income-tax from our rent without production of the tax-collector's receipt, and at the same time tell us how we can then "keep the money"!

One may perhaps wish the various Metropolitan borough councils a little common sense in their endeavours, at the very proper suggestion of the Office of Works, to arrange equality of lighting. The differences lately have been ludierous. We live on a boundary road of two boroughs, lit by gas, which, when the trees are in leaf, is always badly lit. One has extinguished half the lamps and coloured the rest dark green. The other sticks to whitewash. The mere man in the street has been asking himself for months whether the end aimed at might not have been achieved by simply turning down the gas, instead of burn ing a full flame and then obscuring it! The whole thing has been ridiculously overdone, and the conclusion of the Office of Works that 75 per cent. of the lamps in side streets should be lit, and that the reduction in main road lighting has been excessive, might with advantage have been arrived at sooner.

The Government and the municipalities seem to have been smitten with the beauty and profit of teaching other people to practise frugality. Some of our mentors, we fancy, must chuckle to themselves as they hum the refrain of the old song :-

By studying economy We like a lord!

Anyhow, the first and indispensable item of their propaganda seems to be to spend other people's money on "Expert advice and assistance." One instance is furnished by the proceedings at a recent meeting of the Devon County Council, when the following resolution was moved by one of the mem bers :-

That with a view to lighten the burdens of the

That with a view to lighten the burdens of the ratepayers, a committee he appointed to consider whether the expenditure of the county council can not be reduced, and to report thereon.

The committee to consist of nme members of the council and three members relected by the nine from outside the council. The three to be appointed by virtue of their experience in public and other business.

virtue of their experience in pussions.

The committee to have power, if they consider such expenditure necessary, to spend a sum not exceeding £100 in obtaining such expert advice and assistance as they may deem of value to them.

The resolution was defeated, and "Devon. glorious Devon" is to be congratulated on its common sense, or was it that the hundred pounds was not enough to share round?

The presidential address of Mr. J. G. Read, at the Auctioneers' and Estate Agents Institute opening meeting of the session on Friday last, should reassure property owners who are wisely declining to swell the ranks of panic-stricken sellers. That this is so is evident from the diminution in sales during the last five months of 1914, which only

totalled £148,426, as against £1.718,205 in the first seven months of that year. Now is the time to buy for all who can afford to wait during the transition period that will follow the end of the war. Then we are certain values will improve, and more than regain their previous level. In the meantime, of course, auctioneers and estate agents are sharing our own had times, though probably to nothing like the same extent, as their activities cover the field of management of property, unlike thole of the architect and builder, which cease with the completion of the building.

The German trade-mark forgers are at their old game again. A slight telegraphic blunder, the change of one letter into another, and, by consequence, of one word into another, has been the indirect means (according to Reuter's Agency) of disclosing a clever scheme initiated with the double purpose of securing trade profit and of disseminating lies in foreign countries. Switzerland and other neutral countries are naturally open doors to the whole world. So these counterfeited goods go to neutrals, who not merely sell to other neutrals in South America and many British Colonies, but are to-day sending over German goods which are being sold in London disguised under counterfeited trade The forgers are, of course, quite marks. secure from legal proceedings owing to the present condition of affairs, and there still seem to be buyers about, even in our own industries, who are none too particular, if the counterfeited article can be had at a cheaper figure. We are watching the matter, and may have more to say about it shortly.

The Executive Committee of the Star and Garter scheme have wisely decided to abandon their original intention to adapt the existing hotel for the proposed Soldiers and Sailors' Home. After the most careful consideration it was, of course, found that by the erection of an entirely new building on the existing site the Home could be made to provide many more heds at a cost per bed not exceeding the sum originally anticipated for the alterations. It was therefore obviously more economical to rebuild than to adapt the old building, and the plans of the new building are now being settled by the Committee of the British Red Cross Society. with the approval of her Majesty the Queen. In the meantime the annexe is being fitted up as a temporary hospital, and when the new building is completed the annexe will be rebuilt, thus forming a complete scheme. the details of which will be published shortly.

The Liverpool Autumn Exhibition was opened on Saturday at the Walker Art Gallery. The expenses connected with it are being met through the generosity of a Liverpool citizen, and the proceeds from admissions are to be given to the Liverpool branch of the Red Cross Society. Other receipts will be available for the purchase of works for the Gallery. Gallery 11. of the exhibition has been given up this year to a collection of modern Belgian pictures and sculpture, and another to pictures of Burmese subjects by Mr. G. F. Kelly. In addition, there are some smaller special exhibits, including those of the Royal Society of Miniature Painters. In the large gallery, Room VII., the chief pictures are Mr. Orpen's "Western Wedding," Mr. Shannon's "Princess Mary, Mr. Maurice Gieffenhagen's "Woman by a Lake," the last-named a loan by the Chantrey Trustees. The principal landscapes are those building of St. Paul's Bridge appear in the

by Messrs, Cameron, David Murray, G. Houston, Oliver Hall, and Talmage. dominant works in the first gallery are Mr. Arnesby Brown's "Cattle in the Fields," and the "Deserted Quarry," by Mr. W.lson Steer. There are good displays of watercolours by Messrs, Frank Reynolds and Cameron, and etchings by Mesers, J. McBev. F. S. Unwin, and others.

Very late in the day, Mr. Thackeray Turner, Chairman of Committee of the Society for the Protection of Ancient Buildings, replies to the letter of Mr. W. H. Wood, F.R.I.B.A., of Newcastle on Tyne, which appeared in our issue of September 8, p. 279, in which Mr. Wood defended his restoration of the churches of Sleaford and Tickhill from the criticisms made in the current report of the society. With regard to Sleaford, Mr. Turner says the society holds to its opinion that the "careful copying of the carving," which Mr. Wood describes as having been done, is the type of restoration to be resisted. The society now, hears with regret from Mr. Wood that the work has been temporarily stopped only from want of funds, and that it is intended to complete it after the war. With regard to Tickhill, the report contained two photographs showing the south porch before and after 'restoration.'" Mr. Wood says that during the period in which he has superintended the reparation of the church, that is during the last year only, the south doorway has not been touched. This may well be, says Mr. Turner: "No particular date was mentioned in the report nor the name of any architect." So that the restoration denounced is apparently a matter of ancient

We are pleased to learn from the October issue of the Journal of the London Society that the efforts made by Mr. Arthur Crow, F.R.I.B.A., the district surveyor for Finsbury, and other members of the council of that society, to preserve Wren's church of St. Vedost, Foster Lane, have been so far successful that, in the event of the suggested road from Newgate Street to Liverpool Street being found necessary and practicable, it will he possible to form the road without materially interfering with either the use or the appearance of the church. The new building about to be creeted on the site of the old Post Office is to be placed farther north than was originally intended, thus leaving a space between it and the buildings in Cheapside. The result of this will be that the view of the church spire from Newgate Street will be preserved, and the need for the destruction of the church avoided, if at any time the new road becomes necessary. The Corporation of the City of London have reconsidered the question of the traffic requirements at this busy corner, and St. Martin's le-Grand is to be widened to 80 ft, in lieu of 70 ft, as originally proposed, and the western end of Cheapside is to be widened to 95 ft. This is mainly done in order to provide for the increased traffic which it is anticipated will result from the construction of the proposed St. Paul's Bridge, should it ever be built. The officials of the City Corporation evidently believe that the bridge is to be an accomplished fact, since leases of properties acquired on the route are being renewed for twelve months only, with henceforth a tenancy determinable quarterly.

Two interesting letters by architects protesting from different viewpoints against the

Mr. D. B.: demands the reconsideration of PB on the ground that there is .. traffe 'two n Blackfrars and ' d\_(s t) is der the new strac to seigh. He points out that the the note exactly of with any proposal - 14 by the Traffic Branch of the and Irid a so not part of a comprehen to south theroughfare, and that . greach road south of Southwark of his men designed as a complement First er, the proposed bridge has obis it in defects. The level at one side of that shaher than the other, each arch approaches the scuth side, is of less trans than its neighbour, and rearly ever, a use would be out of adjustment Fig. by such unestionable expedients, there emans insufficient length to let a proper color to Suthwark Street, consequently the southern vaidnet is made to bend east ands to gain a few feet. On the north again the landge just misses, the Cathodral, al though there seems little reason why it might not here been in alignment. Where a vehicular bridge is really needed is, he says, t Charm\_ Cross. Mr. A. E. Richardson's objections to the scheme are that it would, by its oblique alignment, destroy the amenities of St. Paul's and of the river itself.

Commenting on these latters, the editor of the John remarks: It is an open secret that this bridge was conceived in unseemly caste by the Bridge Hons: Trustees, at a the exhen they had large funds at their disposid with no fixed destination. Fearing that their roost was being watched for spolite tion, they promptly devised this outlet, and locady, we believe from current rumours regret it. The trustess might have made themselves famous for ever, had they taken mage and given up, as they could in their discretion, the fetish that their finids must be spent within the City boundary, and devoted themselves to a new road bridge at Charms Cross instead. Such a bridge was seen to be necessary as long ago as 1846, when Mr. Permethorne advocated it in conbetween with his scheme for central reconstruction; and to-day it is such an obvious and urgent need that we can only suppose to, the existence of the railway bridge has prevented to realisation. That all traffic from the West End should be forced to crosand Westmanster of Waterloo Bridges, both on of line with the general direction of traffic, shows how long-suffering the London public really is

S. Radmond P. Roblin, the ex-Premier of Manitoba, and Dr. Montigue, ex-Minister of Works, Mr. Howden, ex-Attorney General, and Mr. Coldwell, another Cabinet Minister, were committed for trial on Friday on the charge of conspiracy to defrand the Province of Manitoba in connection with the erection of the Parliament buildings.

"Wind Stresses in the Steel Frames of Office Buildings" is the subject of the most recently published Bulletin of the University of Illinois. The increase in the price of land on large cities has made it necessary to build ingh buildings in order to get a large rentable floor space on a small parcel of land. The type of building generally used is known as the steel-sketeton building. In this type of bail ling the live and dead loads, including the weight of the walls, are carried by a system of beams and girders to columns and are carried by the columns to the footings, In high buildings the horizontal shear due to the wind load is very large; and, since it is usually impracticable to put diagonal braces between the columns, it is enstomary to make the steel frame rigid enough to resist the horizontal shear by virtue of the stiffness of the columns and girders. The exact determination of the stresses in a steel trame due to a horizontal shear is one of the problems of structural engineering which remains to be solved. While the writers realise that the method of determining these stresses presented in the Bulletin is based upon as sumptions which are not exactly true, they believe that the method is more accurate than the methods ordinarily used. The Bulletin can be had in this country of Messrs. Chapman and Hall, Ltd.

Forty-eight new cottages erected at Harton, near South Shields, for old miners and their wives by the Durham Aged Mine-Worker's Homes Association, were formally opened on Saturday afternoon. The architect is Mr. J. II Morton, F.R.I.P.A., of South Shields

The new wing which has just been added to the U.V.F. Hespital, Botanic Avenue, Belfast, has been opened by the Marquis of Londonderry. The building contract was carried out by Mr. William Dowling, under the supervision of Mr. R. J. Calwell, architect, Scottish Temperance Buildings, Belfast.

Another new picture theatre has been commenced in Upper Sackville Street, Dublin The half will be 100 ft, by 28 ft, and 26 ft, in height. There will be a rea lounge and offices in the front having a depth of 50 ft. The interior of the building will be finished in polished mahogany. Mr. T. F. Macnamara, Great Brunswick Street, Dublin, is the architect, and Messes, H. and J. Martin, Grand Canal Street, are the contractors.

New elementary schools at Shiblon, County Durham, were opened on Saturday afternoon They consist of three departments, providing \$100 boys, \$405 girls, and \$400 infants, and in addition there will be accommodation for cookery, housew fery, laundry, and handicraft. The site cost £1,210, and the cost of the building was \$13,883, making a total of £15,093. The cost per head, excluding cookery, laundry, etc., would be £16 14s 4d. The architect was Mr Rushworth, and the contractors Messrs, Make peace and Vaux, of Trimdon Colliery.

Saturday was the seventy-fourth anniversary of the La. Art. I be a constrained as the consecration of Christ Church, Clifton, which has been described as one of the finest Victorian examples of the Early English style in Bristol. The original cost, including the stressed to port the motion production of the motion production of the motion production of the consecration of Christ Church, Clifton, which has been described as one of the finest Victorian examples of the Early English style in Bristol. The original cost, including the stressed to port the motion product (1212 ft in height) were added, according to the original design, at a cost of £2,400. In 1545 north and south asless were added at a cost of £3,000 after litigation, several in fluential residents being of opinion that the additions, if carried out, would irreparably destroy the beauty of the edifice.

## Our Illustrations.

BLACKSOD BAY RAHWAY TERMINUS STATION IN THE HARBOUR, MAYO, CONNAUGHT, IRELAND.

We give to-day an interior of the station hall or concourse, with an exterior perspective and plan, reduced, on a separate sheet, with the entrance elevation of this station, which has been designed to be built on a reef of rock projecting into Blacksod Bry, and to be a terminus for the Transatlantic traffic. The largest liners are able to berth at the end of this reef, which is the occusion for the The conrailway station being so placed. struction of the building is intended to be carried out in reinforced concrete. The main feature is the concourse, which forms a waiting-place between the platforms and the har-The interior perspective shown by our double-page plate was included in the Royal Academy Exhibition this year. The architects are Messrs, E. B. Hoare and M. Wheeler, F.F.R.I.B.A., of Portman Street, Portman Square, W.

DECORATIONS OF THE SCHOOL CHAPEL, CHRIST'S HOSPITAL, HORSHAM, SUSSEX.

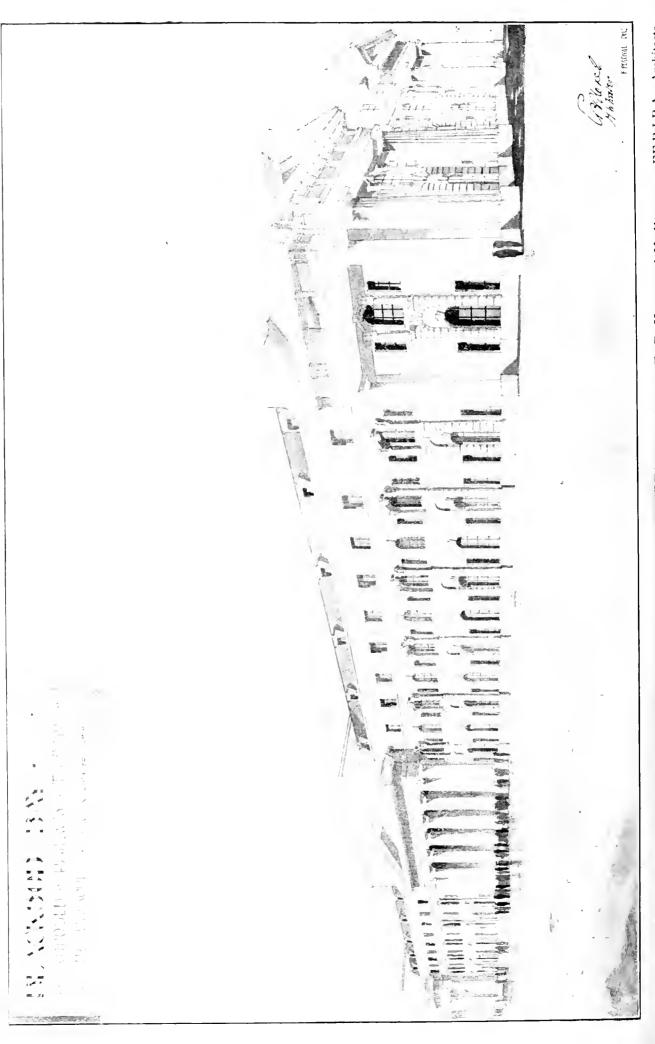

Last week we commenced a series of illustrations of the decorative panels of the Eathers of the Church, which have been painted in tempera as a frieze round the chippel of Christ's Hospital School, near Horsham, by Mr. Frank Brangwyn, A.R.A. Today we give two more of the subjects, viz., St. Pull Shipwrecked, "so it came to pass that all escaped safe to lan l." and the Conversion of St. Augustine at Milan, A.D. 387. "Take read! Take read!" With our previous reproductions a brief description of the scheme was printed and the uniformity of the individual panels, as subordinate to the whole decorative conception, renders no further particulars necessary. We hope at the end of the set of plates to give a view of the chapel showing the decoration in its entirety.

# THE PLYMOUTH CO-OPERATIVE AND INDUSTRIAL SOCIETY'S NEW PREMISES COMPETITION.

SELECTED DESIGN.

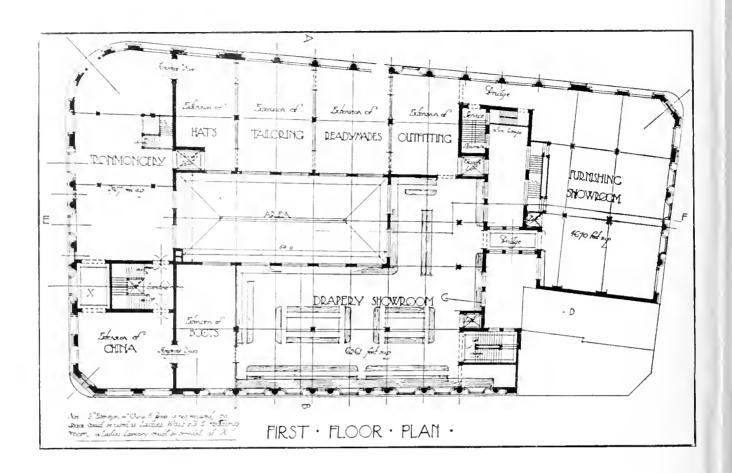

To-day we publish the two main elevations of the chosen design. The upper one shows the chief front to Courtenay Street, and the lower one faces Raleigh Street West. ground and first floor plans now given clearly show the difficulty with which the competitors had to contend in dealing with the rightof-way into the basement of the building to enable vans and motors to descend and circulate, besides providing a rendezvous for the reception and delivery of goods. The other difficulty to be remembered in discussmg the elevational treatment of the premises architecturally was, of course, the requirements of the Co-operative Society, above all other considerations, to allow ample uninterrupted window space for display of goods on the street level. The architects of the chosen design, with this idea, advanced the groundfloor glass fronts by nine inches in projection of the superincumbent masonry, as a counterfoil to the apparent inadequate support to the superstructure; this glazed screen was introduced standing out in advance of the stanchions currying the upper floors. the elevations this difference of face, of course, does not show, but actually in execution the authors think it will well realise their intention. Taking the selected plans as a whole, Messrs, James T. Halliday and Claude Paterson, AARIBA, conjointly with Mr. C. Gustave Agate, LRI,BA, of Claude races....
with Mr. C. Gustave Agate, L.R. (B.A., or
14. John Dilton Street, Munchester, as the
joint architects chosen, have certainly most
satisfactorily solved all the difficulties presented.

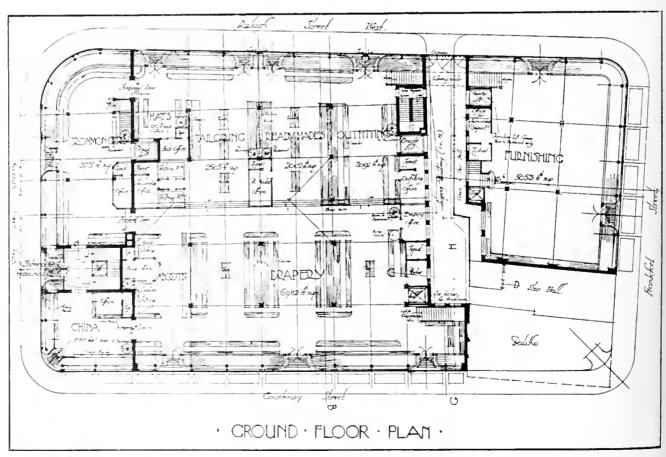

The first meeting of the Birkonhead Corporation since July was held on Wednesday, when it was officially reported that not a single planhad by a submitted for approval to the improvement committee during the last three months. There is practically, it is stated, no building in progress in the borough

Eldon Square. Newcastle-on Tyne.

EXETER. At a meeting of the estates can be adjusted.

EXETER. At a meeting of the estates committee of the Exeter City Conneil, last week, it reported that the roofing and external walling of 8t. Nacholas Prory the ancient Bene licture building which has been purchased and is being restored by the Exeter City Corporation, was nearly completed. The roof timbering and plastering of the guests' hall and the prior's room were completed; and the workmen were finishing the roof over the kitchen. The work still recompleted: and the workmen were finishing the roof over the kitchen. The work still remaining to be done was the stone starrouse; the south end wall: flooring of certain rooms; roofing over the south end; and a tew doors and windows. It was anticipated that the restoration would be completed during the coming spring. At the moment the Priory passed into the hands of the Eveter authority it had degenerated into a batch of small tenements. having gone through many the ments. having cone through many changes for the werse since the Dissolution. The restoration is being carried out by Mr Lewis F. Tonar, L.R.I.B.A., Bedford Citcus,

GOLDER'S GREEN. The new Roman Catholic Church of St. Edward will be opened by the Cardinal Archbishop to day. Wednesslay. The building, which has been erected total designs by Mr. Arthur Young, is in ne Perpendicular style. The main feature is the central lantern tower, the square massive proportions of which rise up to a height of nearly 80 ft. with an interest height of of nearly 80 ft. with an interior height of bout 75 ft. The tower rises from the nave n four massive columns. It is 27 ft. 6 in. lear in the square, and forms the centre from lear in the square, and forms the centre from hich branch the sanctuary, the nave, and the tansepts. The width of the transepts is 6 ft., and the total length of the church is 28 ft. The sanctuary is 50 ft. in length nd 27 ft. wide, and rises with two steps to ne Communion rails. The predellar is again tree steps to the altur, thus putting the tar in such a position that all in the church at see the officiating priest. The calling the sanctuary is in oak. Left and right the sanctuary are two side chapels. These is 27 ft. across and is hordered by two occasional aisles 7 ft. 6 in. wide, giving a stall width of 46 ft. 6 in.; the aisles lead the side chapels. The western entrance the building, above the outside of which the Calvary, forms a novel feature. Tenest inside the main door is a stone screening right across the church, thus forming timerely a church porch but an intechapel. and again across the entiren, thus forming a merely a church porch but an intechapel, glit and left of this main porch are the ptistery and the chape, in honour of the yen. Polours,

MANCHESTER. - During the last few norths a scheme for the internal reconstructor of the Athenicum has been under conseration, and it is expected that the work all be completed by the middle of Novem-1. The library has been removed from the fit floor to that part of the basement which we formerly used as a chessroom, and access to it will be through a staircase from the Lasroom. In future the library will be acinged on the open access principle, and a scial room opening off from the newsroom is to be devoted to directories and works of refence. The first floor will be used cuttly for club purposes. A new lounge at smokeroom will take the space formerly ompied by the library, the old magazine

INSTITUTE OF HYGIENE. A lecture of The Use and Abuse of Light" was given by Mr. Loon Gaster at the Institute of Hygiene on Thursday. Until recently, the author remarked, the lighting of shops had been futile and wasteful in the extreme. Government Committee had found that mis directed light was a cause of curvature of the some and other diseases in children. On the other hand, bad light caused shortness of sight, and glare was equally harmful. signi, and giare was equally harmful. Nowadays reflections were made with such pregion that it was possible to throw the necessary amount of light just where it was required. To fact the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the required. In factories there should be adequate lighting—a reasonable degree of constancy and uniformity of Alumination over the necessary area of work but an avoidance of direct and horizontals glare; and there must be the utmost care in the placing of lights, so as to obviate the casting of extraneous shadows on the work.

"ROUND THE WORLD IN WAR IME." Mr. W. T. Oldrieve, F.R I.B.A., TIME." who has just arrived home after a four round the world, undertaken on his retirement from the post of principal architect to H.M. Office of Works at Parliament Square, gave a lantern lecture on Wednesday night in Morningside Baptist Chu ch, Edinburgh. Amongst the more important ports visited on the voyage were Cape Town, New Zealand, Australia, and the South Sea Islands. The lecture, which was profusely illustrated by beautiful views chiefly from photographs taken by Mr. Oldrieve himself-was most interesting, a re sult contributed to in no small degree by Mr. Oldrieve's accompanying explanatory remarks A pathetic interest attached to several pic tures which he showed of Samoa, including as they did views of Robert Louis Stevenson's house and grave. In connection with the war, Mr. Obbrieve had something to sav about Brit destroyers, aeroplanes, and British and Japanese cruisers that he saw while on his tour. Speaking of the effects of the war, Mr. Oldrieve said that we here ought to be most grateful for our comforts and the extent that were able to keep on the normal course, as it was not so in some places where he had been recently. One thing that struck him while on his journey was the tremendous enthusiasm for our cause. Our Government had made a great stand for the cause of truth and liberty. In New Zealand especially, it seemed to him, they had grasped the situation even in a more thorough way than we had here at

ROYAL INSTITUTE OF THE ARCHITECTS OF TRELAND - An ordinary meet ing of the council was held at the institute rooms, 31. South Frederick Street, Dublin, on Monday, October 4, at 11 a.m. The President, Mr. R. Caulfeild Orpen, B.A., R.H.A., was in the chair, and there were R.H.A., was in the chair, and there were also present: Messrs, L. O'Callaghan, H. Allberry, F. Hayes, G. P. Sheridan, W. A. Scott, G. L. O'Connor, C. A. Owen, W. Kaye-Pirry, A. E. Murray, R. M. Butler, A. G. C. Millar, and F. G. Hicks (hon, secretary) Refuse proceeding with the hasiness of the meeting the President proposed the following resolution:—"The council of this institute desires to place on record its sense of the great loss the institute and the profession of architecture generally has sustained in the death of Mr. W. H. Lynn, president of the institute in the years 1886-87-88. Mr. Lvnn, during a long life voted to the practice of the profession of his adoption, designed many important public and domestic buildings, which, both in Ireland and England, testify to his masterly qualifi-The minutes of the previous meet vations. ings of the council were read and signed. Hemingway Yeoman A special meeting of the council was arranged to discuss the question of architects' fees

SCOTTISH NATIONAL BUILDING again fill the sails and waft it to a prosperous TRADES FEDERATION.- The twenty- haven.

first annual meeting of this federation was held on the 4th inst, in the Trades House, Classford Street, Glasgow, Representatives were present from all centres in Scotland, including Edinburgh, Aberdeen, Dundee, Dunfermline, Kirkcaldy, Stirling, Kil-marnock, Ayr, Greenock, Dumbarton, etc. marnock, Ayr, Greenock, Fundament, Mr. George Lyall, Junior (Aberdeen), president occupied the chair. Prior to the business of the meeting the delegates were accorded a welcome by Bailie M'Kechnie. D.L. In its annual report the board states:— The activities of the federation have during the past year been carried on under the most unfavourable conditions. In common with many other industries, the building trade throughout the country has been seriously affected by the war. Notwithstanding national crisis, the organisation of the federation has been strengthened, and much important work has been accomplished. Notable progress has been made in secur-ing regulations of entering into and carrying contracts for building works in Scotland and for a Scottish mode for the measurement of building works. The regulations, it is hoped, will shortly be finally adjusted. Pre-liminary rules for measuring work applicable The regulations, it is to all trades and the mode of measurement for carpenter and joiner work have now been established. Long-standing grievances will have been terminated, and to Sir George Askwith, the Chief Industrial Commissioner, great credit is due. Altogether he has already presided over nine conferences, most of which have lasted from early morning till late at night, and exercising the utmost skill and patience in adjusting differences. Questions lealing with the reinstatement of apprentices serving with the Army after the war and the employment of non-union labour were fully discussed at the meeting. Office-bearers for discussed at the meeting. Office-bearers for the ensuing year were appointed as follows:— President, Mr. Henry H. Spittal, Glasgow; senior vice-president, Mr. Edward Bruce, Edinburgh; junior vice-president, Mr. George Rose, Kilmarnock; and a hoard of eighteen members. Secretary and treasurer, Mr. Thomas Ferguson, solicitor, 123, George Street, Edinburgh.

WAR VALUES OF REAL PROPERTY.-The Auctioneers' and Estate Agents' Institute of the United Kingdom held its first meeting of the session of 1915-16 on Friday night, when Mr. J. George Head delivered his presidential This dealt entirely with war values rent property. After analysing influences affecting the matter, Mr. Head summarised the conclusions arrived at as follows:-That owing to the upheaval of our lives in all these respects (economical, domestic, and financial) property market is depressed, and prices have fallen to such an extent that the ques-tion is no longer "What will the property fetch?" but "Can we find a buyer?" That the revival will come not immediately with the arrival of peace and the improvement in trale, but after an interval, when profits have eased the money market, reduced the demand for capital, and having been saved, are ripe for investment. That values, although much above the prices now obtainable, will be lower at the conclusion of the war than they were before, owing to the demand for capital in other spheres, the abundance and cheapness of gilt-edged securities, and the high rate of interest caused by these conditions. That present values should be calculated not at panie prices, but with relation to the lowered figure likely to prevail during the transition period, by deducting therefrom a sum sufficient to allow for accumulation of interest during the duration of the war, and a further sum for contingencies. That this transition period of depression may be expected to last some years. according to the analogy presented by previous wars. That during the period of transi tion (given a rest from new disturbing influences) prices will gradually rise, and that afterit has passed they will regain and probably surpass their previous altitude. The situation (the speaker thought) is one which calls for grave attention and some anxiety, but not for despondency, and certainly not for panic. We are passing through a serious crisis; but storms have been weathered before by the ship of our island State, and favouring winds will

BIRMINGHAM.-Builders' labourers in the BIRMINGHAM.—Builders' labourers in the Birmingham district are to receive a war bonus of a halfpenny an hour. This dec s'on has been arrived at as a result of negotiations between the Birmingham Building Trades Employers' Association and the National Union of Builders' Labourers. The bonus will be paid as from October 24, and will continue for three months after peace has been declared. The masters have offered the bonus to all sections of the building trade having an agreement with f the building trade having an agreement with their association, and it has been accepted by the labourers and the navvice. The other sec-tions have the offer under consideration, and in all probability it will be accepted by the

BRADFORD.-The dispute arising out the demand of the Bradford builders' labourers for an advance in wages has been settled. men have been granted one-hallpenny per hour advance, and the question of other conditions has been left to be determined by the Board of Conciliation

#### TRADE NOTES.

A public swimming-bath has recently been erected in Barrow-in-Furness. We understand the borough engineer adopted the powder Pudlo for waterproofing the same.

Boyle's latest patent "Air-Pump" ventilator has been applied to Bawdsey Church, Suffolk.

The members of the London and Middlesex Archaeological Society will pay a visit to Tottenham on Saturday next, and will be shown over the parish church and Bruce Castle by Mr. W. J. Bennett, librarian of the Tottenham Mr. W. J. Beni public libraries.

Mr. T. L. Hustler, borough engineer of Shoreditch, who has been appointed a lieutenant in his Majesty's Forces, has been presented with a service sword and a full eamp kit, as a mark of esteem from the officials at the town hall.

At a meeting of the Newbiggin Urban District Council on Thursday night a block plan was submitted by the agent for the Cresswell estate, showing sites for 323 houses proposed to be built in the Bull Field, Woodhorn Lane, Newbiggin. The council decided to give general approval of the plans subject to certain altera-

Mr. John Gill, city surveyor of Bangor, has submitted a report to his council showing that he had during the twenty-four weeks ending September 9, effected the following savings:—Main roads, £35 2s. 8d.: highways, £57 9s. 9d.: lighting and wages, £60 11s. 9d.; gas, £75: pleasure grounds, £6 6s., in addition to a sum of £63 saved by deferring the making up of Gorad Road, the total saving in the twenty-four weeks being £297 10s. 4d. John Gill, city surveyor of Bangor,

The scaffolding around the magnificent Perpendicular tower of St. Stephen's Church Bristel, has recently been removed, and the work of the restoration is practically comperster, has recently been removed, and the work of the restoration is practically completed. The architects were Messrs, Paul and James, of Bristol, and the contractors Messrs. Cowlin and Sons, of the same city. The outlay has exceeded £3 000. At some future day the south porch will be similarly repaired.

The passion for economy may be carried too at. The Stamford Board of Guardians having the chimney stack at the workhouse was out of repair, discussed with great length at their last meeting the question of accepting or rejecting a tender for its renovation amounting to £3 10s. Eventually it was decided that the isk of injury by lightning was so small that in he interests of the ratepayers the old rod should be taken down and not replaced.

Mr. A. G. Temple, F.S.A., the Director of the Guildhall Art Gallery, has now completed the rearrangement of the pictures in that collection. Nearly 1,000 works are now displayed in the galleries, but there are many others which for want of space cannot be hung, and are now, placed in various committee rocons. which for want of space cannot be hung, and are now placed in various committee-rooms and lobbies in the Guildhall itself. Recent additions now exhibited in the galleries include Frank Holl's "The Lord Hath Given, the Lord Hath Taken Away," a bequest of Mr. F. C. Paul, of Reignte; a portrait of Lord Mayor Cubitt, by Sir W. Boxall, given by Lord Ashton; and a water-colour drawing of Rheims Cathedral as it was just before the war, by Mr. H. C. Brewer

#### LEGAL INTELLIGENCE

ACCESS TO FIRE ESCAPES.-A recent fire in Manchester, in which a man lost his life by jumping through a window, has called attention to the fact that some employers of labour in that city are not keeping clear the entrances leading to the fire escapes. The Marchester Sanitary Department have issued warnings to forty or fifty firms in regard to the matter, and have intimated that noless the means of escape in case of fire are kept in proper condition prosecutions will follow. Two cases against employers were heard at the Manchester City Police Court on Wednesday, and the evidence showed that in one case the and the evidence showed that in one case the doors leading to the escape on two floors were either fastened or obstructed with goods, and that in the other case the door on one floor was barred with pieces of wood. Mr. Pickford, who prosecuted, said Section 14 of the Factorial Western Agency 13 was a constant. and Workshops Act provided that where escapes had been erected it became the duty of the owner to see that the escapes were main it became the duty tained in proper condition and that the meanof access to them were free from obstruction The Stipendiary Magistrate imposed a line of

### ARBITRATION AS TO SPITALFIELDS MARKET.—Spitalfields Market having been acquired compilsorily by the City Corporation under an agreement, dated December, 1914. acquired compulsorily by the City Corporation under an agreement, dated December, 1914. from Mr. Robert Horner, an arbitration was opened on the 5th inst, at the Surveyors' Institution to decide the purchase price. Mr. C. A. Russell, K.C., was the arbitrator, and the counsel were Mr. Balfour Browne, Mr. Upjohn, and Mr. Landers on behalf of Mr. Horner, and for the Corporation Mr. E. H. Lloyd, Mr. Vesey Snow, and Mr. H. C. Munroe. Mr. Balfour Browne explained that the lease of the market, which had a charter dating from 1632, and certain other properties with the market franchise were acquired for \$2,500 a year by Mr. Horner in 1375, and in his hands the market was greatly improved. In 1882 he got a new lease of eighty-four years at £5,000 a year, one of the conditions being that he should spend at least £55,000 on remodeling the markets. Various Parliamentary Bills were promoted by the London County Council and the City Corporation to acquire the market. In 1901 the City Corporation offered £350,000, but Mr. Horner's minimum was £400,000. In 1904 he offered to sell his rights and property for £600,000, but subscipted the market withdrew the offer. In addition to the rights and property for £600,000, but subsequently withdrew the offer. In addition to the value of the market, which occupied 2½ acres, there was much property. The arbitration is being continued. being continued

DRAUGHTSMAN NOT A "WOR MAN."—Professor Tillyard presided over sitting of Coventry Munitions Tribunal, Friday, with Messrs, T. Hancox and W. Dexter (Rugby) as assessors. The case John A. Northfield, draughtsman, O John A. Worthfield, draughtsman, O Janor Hause, Sillsaurae, who, complain and W. II John A. Northfield, draughtsman, Old Manor House, Silbourne, who complained hat the certificate of leaving was unreasonably withheld by Messrs, Willans and Robin-Timical Rughy, raised, the chairman on, Limited, Rugby, raised, the chairman aid, a new point—whether a draught-man was workman within the meaning of the Muniworkman within the meaning of the Muni-ions Act. Applicant produced a letter from he Ministry of Munitions, in which it was aid:—"I am directed by the Minister of Junitions to reply to your letter of August I respecting the position of draughtsmen and ther salaried employees, as distinct from orkmen, with regard to leaving their em-loyment and obtaining other engagements Isewhere. . . The Minister is advised at the term 'workman' should be construed its ordinary sense as meaning a person who. lat the term 'workman' should be conscious, its ordinary sense as meaning a person who, ibstantially, does his work with his hands, at all events, by physical exertion." There are the further question, whether Northfield as the further question, whether Northfield as engaged on munitions, and Mr. Briggs, as engaged on munitions, and Mr. Briggs, presenting the company, said the engines on to plans of which applicant was working, ere sold almost exclusively to armament firms, hen Northfield had been offered more responsible work elsewhere. The chairman said the cision of the Court was that applicant was it a workman within Section 7 of the Act, and a statement would be made that no certifiate was necessary for him.

d a statement would be made that no certi-tate was necessary for him.

IN RE HARRISON AND GREGORY,
IVERPOOL.—A meeting was held in Liverpol on the 5th inst. of the creditors of Mr.
Illiam Harrison, of Southport, and Mr.
Denezer Little Gregory, of Liverpool, who
aded as Harrison and Gregory, timber mercants, Greenland Street, Liverpool. The
ficial Receiver said the joint liabilities
counted to £12.443 18s. Id., and the net joint
sets to £5,605 10s. 7d. Mr. Louis Nicholatys appointed trustee with a committee of
ispection. inection.

It was so if the had sught to induce the

A similar adegation was suggested in Mr. Harrison's relation to the city surveyor's committee, in the first case, bound that Mc Harrison 's was indiscreet and a result. Harrson was indiscreet and committed an error of judgment. They did not, however, consider he was actuated by any corinpt mostly. In the second case they thought he "showed indiscretion but no corrupt motive." Mr. Harrison assured the corrupt motive." Mr. Harrison assured the council that he had no corrupt motive in anything he had said or done. In the development of the brick industry of Manchester thousands of pounds had been spent; it now stood second to none in the country and he had tried to do the best he could tor the trade. The report was adopted, and the matter ended.

During the months of July, August, and September, 1915, the Road Board indicated additional advances to highway authorities additional advances to highway authorities amounting in the aggregate to £38,687, of which £33,715 was by way of grant, and £4,974 by way of lean. The advances made and indicated from the constitution of the board up to September 30, 1915, less indications cancelled, amount to £6,170,966. Of this total £4,719,466 is by way of grant, and £1,451,500 by way of lean. The formal grants completed, with the approval of the Treasury, during the last quarter, amounting to £94,013 during the last quarter, amounting to £94.015, were applied as follows:—Road crust improvements, £88.781; road diversions, £705; bridges reconstruction and improvement of £1.800; new roads and bridges, £2.727.

A writer in the Commonwealth Engineer describes the reinforced-concrete sleepers that have been laid in Adelaide, 8.A., to carry train rails. The sleepers used are reinforced train tails. The sleepers used are reinforced in compinction with a metal sloe, on which the rail tests. The shoes are connected with reinforcing rods, and these are strengthened by intervening braces. The whole forms a truss bridge, which in itself is very strong, and is further strengthened by the allition of the present of the sheeper is concrete. The ironwork of the sleeper is placed in a mould, into which the concrete is conred, and the necessary tamping is done to ensure that every crevice is filled. The bottom of the sleeper has a concave surface, which is considered an improvement on the usual flat bottom, as it gives a better grip of the road hel. When the sleepers are laid the rails do not come in contact with the conrete, and all vibration is taken on the shoe, The initial cost per sleeper is considerably higher than in the case of wood or steel, but the Imability is said to be immensely

The discovery of walnut on the Pacific constrof Mexico is generally regarded as very important, since many have believed that walnut was a stranger to the woodlands of western and southern Mexico. Botanists have named it Jughans mexicana. A number of prospectors have reported three varieties of this walunt—white, red, and black—in great abundance. O, these the black is said to be the most valuable, as it is curly in gran, and as fine as the Circassan walunt from Asia Minor. It is susceptible of the nnest polish, and seems metallic in its com-pactness. The region where this walnut grows is exceed ugly rugged and wild. The forests are very dense and must have stood for centuries undisturbed by fire and axfor centuries undistributed by the and axis. It is not unusual to find walnut trees from which ents 80 ft in length and 4 or 5 ft, is launcted may be obtained. It is believed that after the walnut in Arkansas and surto neling territory tecomes more nearly ex hand I, the Mexican walnut will find a rendy sale, both in the Unitel States and in Europe

firtish Misseum Lectures, "Architecture of Ancient Egypt," by Banister F. Fletcher, F.R.I.B.A. 4.30 pm. Society of Architects, Special Meeting to receive Report of Scrubners on Ballot for Officers and Council. 28, Bedford Square, W.C. 6.30 p.m.

FRIDAY.—Town Planning Institute. "The Planning Design, and Arrangement of Railsay Ferninals," by James Crossland, Lic.R.I.B.A., 92, Victoria Street, S.W. 8 p.m.

Sheds and other additions are about to be built at Highfield Mills, Ossett, from plans by Messas Holton and Fox, of Corporation Street, Dewsbury.

St. Nicholas' Church, Ardtole, Ardglass, Co. Down, has recently been conserved by H.M. Board of Works, and its history and details noted by Mr. F. J. Bigger, M.R.I.A. Its full size and architectural details are now for the first time exhibited to the visitor. The remarkable feature of the building is the size of the cast window. This has now been explained by the discovery of large fragments of stained glass with which the window was filled beform it was ruined and destroyed. No old church in Ireland has provided such a store of early painted glass as has St. Nicholas of Ardtole. The doors and other features of the building are also well worthy of examination. St. Nicholas' Church, Ardtole, Ardglass,

The Kirkea'dy I nited Free Presbyte via voluceded to build a new him seef 5 satisfies on the main road at Derbeat, in every proximity to the collecty.

The funeral took place at Berkeley on I need day in last week of Mr. Edward Grezery, whose death occurred on the previous Fridae, at the age of many years. The deceased had for many years carried in the business of builder and timber merchant in Berkeley. For some years he had lived in retirement.

#### TO CORRESPONDENTS.

We do not hold ourselves responsible for the opinions of our correspondents. All communications should be drawn up as briefly as possible, as there are many claimants upon the space allotted to carrest indents

corresp indents. It is particularly requested that all drawings and all communications respecting illustrations or literary matter, books for review, etc., should be addressed to the Editor of the Building News, Effingham House, I, Arundel Street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' tisks, and the Editor will not undertake to pay for, or be hable unsought contributions.

f.r. unsought contributions.

\*\*\*Drawings of selected competition designs, important public and private buildings, details of old and new work, and good sketches are always welcome, and for such no charge is made for insertion of nurse commonplace subjects, small churches, chapels, houses, etc.—we have usually far more sent than we can insert, but are glad to do so when space permits, on mutually advantageous terms, which may be ascertained on application

When favouring us with drawings or photographs, architects are asked kindly to state how long the building has been erected. It does neither them not us much good to illustrate buildings which have been some time executed, except under special circumstance.

Telephone: Gerrard 1291. Telegrams: "Timeserver, Estrand, London."

#### A FERRO-CONURETE FACTORY.

The new London County Council regulations, when they are finally approved by the Local Government Board, should do much to stimulate reinforced concrete construction. It will be useful to consider generally the application of these rules to practical design, and in order to provide a means of illustrating our remarks, we have prepared the accompanying sketch plan and section of a building suited for actory or many other purposes, such as a warehouse or motor works. The overall area is 100 ft. by 60 ft., from centres of vail piers, and from these points, for the ake of round numbers, we shall consider he sketch design. The plan is divided ransversely into three bays, and longiudinally into five, so that the spans are 0 ft. from centres of piers. There are hus, on each floor, four main beams runing transversely, and eight subordinate eams longitudinally. There are sixteen rall-piers on each floor and sixteen wall-eams. F.P.S. is a fire-proof, or "in-ombustible" staircase; F.R.S. a fire-re-testing stairs, and F.E.S a fire-escape aircase. Offices are suggested at O, and large goods lift could be arranged at L. sanitary annex would be required, duly at off by a ventilated lobby.

The whole of the weight of floors and operimposed loads is assumed to be car-ed by the columns and wall-piers. Thin ell-panelling is shown between these tter, and walling sufficiently thick and itably reinforced to enciose the tireoof and fire-resisting stairs In making deulations for a design such as own, we should need to decide upon the cessary "superimposed" load as reduled, under various conditions, in rt II. of the L.C.C. regulations.\* For a "workshop" the allowance is 112 lo. of ft. super., and for a full warehousethe building 224 lb., and on this class a structure no reduction is permitted in n'ny-storied construction, as is the case f other types of building

There is one feature about reinforced elecrete design that greatly assists the digner-the homogeneity of constructhe material; and we will take the weight othis, i.e., of the complete concrete and the steel at 150 lb, per cubic ft. Whereas it ordinary building construction we need ir calculating loads to take out brickwk, steel, timber, stone, etc., each with thir specific weights, in reinforced conof the building parts in feet and divide by 150 for weight in lbs. We have Aroximately estimated this design as 1.3 tons. The "cube" of the building is approximately 100 ft. - 60 ft. - 40 ft. or 240,000 cubic to ; so that, if we price plain ferro-concrete shell at 4d. per enlinft., the cost of the design shown would be  $\mathfrak{L}4,000$ . The price of the complete material in sith would, therefore, appear to be  $\mathfrak{L}4,000 \div 1.598$ , rather less than £3 per ton of the complete reinforce l material, labour and "forms." Taking the steel as 5 per cent. of the whole, it would weigh 5:100 × 1,3981 say, 70 tons, costing, probably, in normal times, about £500 for ordinary steel merchant bar. If we take Portland cement concrete in trenches at 15s, per yard of 4 000 lbs., the difference between 15s, and £3 per ton must be deemed to represent the extra cest of high-grade concrete, reinforcement forms, laying, and careful "tamping," With steel at a premium and engineers' labour scarce, reinforced concrets con-struction seems highly suited to the present times. It may be noted that new L.C.C. regulations permit of calculations for loads and stresses of concrete, reinforced, at as low as 144 lbs., but we a pressure of 30 lb, per square uich musi have taken the usual figure of 150 lbs, be resisted as from both sides. have taken the usual figure of 150 Hes.

The whole of the interior beims, as sketched, are Theams, and are "con-tinuous," with "fixed ends," as defined in Ruly 32, and come generally under regulation in Part II, and as to detail of construction, must be in accord with the instructions laid down in Part III. T beams, taking compressive-s') as assistance from floor-slabs, are dealt with in Rule 82; and L-beams, to which class we should consider the wall beams above windows relate are considered in Rule 84. The main beams in the sketch come within the scope of rule 91 "become sup-porting other beams," and the "longitudinal bars of the supported beam must be continued across to the further side of the supporting beam," the ends of the bars being hooked; and it is to be noted that the regulations require, in the case of subordinate beams, such as are shown on the sketch, that the positive bending moments should be "calculated on the assumption of the ends being freely supported

The design of columns, such as shown in our sketch, is a matter dealt with in Part IV, of the regulations. The L.C.C. rules do not, strictly speaking, deal with foundation design specifically; but Part IV, refers to such, and gives the allow able pressures on soils as 1, 2, and 4 tons per square foot for soft and wet sand and elay, for natural clay beds, and for compact gravel, etc., respectively; and states, further, that the pressure on plain concrete, in foundations, shall not

exceed 12 tons per square foct. Then slabs generally, as so oit in in part pergante elements of T-beams, a + a 2001 deal considered in the regulations in connection with beams. The method of calculating bending-moments on slabs is given in rule 37; "effective slab depth" is defined in rule 72; and an important practical detail in rule 86, wherein it is set out that T-beam slass shall have transverse reinforcement across the full breadth of slab taken as beam-flange. It may be pointed out that the suggested well for goods lift in our sketch jdan is an example of a true LJ cam, as specifically dealt with in rule 84

The sketch shows berroson rate walling of ween onter wall piers and round stairs Wall design is regulated in Part V., wherein is laid down a general instruction that, so long as designed in accordance with the general regulations to meet suitably the several stresses, such walls may be of any thickness not be sthan four inches. Rule 130 deals with wall panels, such as shown in the sketch, staring that

Affecting our sketch proposals, Rule 131 lays down that in a wall of any story above the ground story the aggregate area of window openings shall not exceed two thirds the whole area of such wall; and that the aggregate widths of such openings shall not exical three-fourths of the whole length of the wall. These regulations are duly observed in our such that also affecting our proposals, the superimposed load on stars and lumings (Rule II) shall be equal to 120 Fee per scharafoot, each step further the expense of thirds the whole area of such wall; and 11) shall be equal to 120 for a grade of foot, each step further to a quick of supporting a concentrated lead at every point of not less than 300 lb be a roofs the flat shown must bear a super norseal load of 55 lb per square foot; at under the regulations the light starr all boads indicated on our sketch section in the discovered line may be included in the disregarded i.e., may be included in the general superimp sed load.

For calculations for leads to the lesson of beams and slabs, and to a contribute to the weight on such and the leaders students, and so, furdly, at the possesses transmitted to the foundations we took of the outset, to assert an the energy of the outset, to ascertain the energy of nacut on beams, and with this R 25 22 to 40 deal in detail. It is no essay to the L C.C. regulations are to entropy a tone concrete design, to analyse energi's the eigenmustances of loading and the mature of the beam, and so unity of order moments in accordance with beams active in the rules. In our learn we can enter the contract of the search of the load of the search of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of given in the rules. In our lesign we con-templated in exempolistributel loading: and so far as such a thing is practically possible, the ends of our beams are "fixed." We have noted above that the

NE, July 14, 21, 28, and August 4 of present year.

regulations stipulate that beams supported by other beams must be regarded as having "free" ends. Ferroconcrete structure, however, has little or nothing to do with true free ended beams or true restringular beams; if it has, then it misses the beauty and economy of the given in Part III applied to the design system. All the main and subordinate of beams having the necessary moments beams in our sketch are, technically, of resistance, fixed," and are "continuous," designed. The econom

434

to be moulded in bloc-i.e., as though the tion largely results from the application of imposed load of 56 lbs. per foot super.

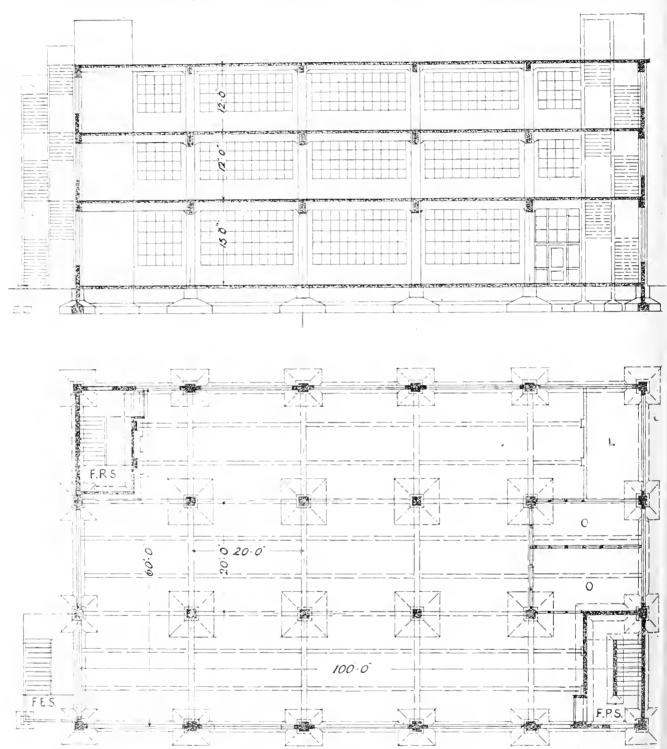

which deals with the divergence in effect of loading at end and intermediate spans. Having had careful regard to these general rules and modifying circum-

The economy of ferro-concrete construc-

in the rule following. No doubt the scree walling below the window-sill, if effe tively connected and homogeneous, wi beam, assists this latter; but in calcul tions this would be ignored, and the bea designed as an L-beam carrying its sha of flooring and the screen walling.

Ост. 20, 1915.

In making calculations for a buildi such as our sketch shows, we should beg from the roof, which has to bear a supi

SUGAL-SIED DESIGN FOR A FERRO-CONCRETE FACTORY: GROUND PLAN AND SECTION.

east in a solidifying fluid -11- that in theory, or violety on general consideration. that end this are no systemic as intermediate. given even spins and similar cross section to greders. Of these points the regulations take note; so that, in addition to recovering to the scheduled formula of bending moments for various elementary the amount of floor slab allowable as contended to the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less than the less t

[th - T-beam principle, which views a large] and cross area of floor slab as available for taking up compressive stress; and this, which applies throughout our sketch proposals, excepting where L-beams are e-rised, is a matter regulated by Rule 82.

The wall beams carrying the margins of floors and screen-walls are L-beams, and

the case of six columns, the load the mitted to the foundations is roof, send and first floors with their superim ed loads, as included within a square of ! ft. centred about the axis of the column to gether with the included parts of in and secondary beams, and the total w ht of the columns. Since the econor of affected by the cost of "forms," should be simplified as

or, more correctly, the design should be prepared bearing this important point in mind. Although calculations may show that an organic part-beam or column. etc.-should be of a different total breadth and depth of reinforced material, it is not absolutely necessary always to proceed on this plan, and in many cases real economy may result from putting a little extra concrete and reducing the steel. Thus, in ordinary practice, the columns shown in our sketch would diminish in cross area in upper floors. As a suggestion we have shown them of similar area as illustrating the principle of maintain ing sizes to simplify "form" work. The steel reinforcement would be, of course, reduced, and more than in the proportion if the columns were designed of reduced area at higher positions.

A design must be suitable for ferro-concrete construction. The more simple and plainly rectangular the better for the form work; the more that part repeats in exactly similar form as to height, length and breadth, the less costly will be the timber framings and boxings, etc. think that our sketch typifies the kind of structure most suitable. The plain rect angular construction is modified some what by the staircases and lift well, but apart from this the scheme seems highly suited. If more floors were added, the ame superimposed loads being carried. and the same pitch of 12 ft. floor to cerlng being maintained, the total economy f reinforced concrete construction should e still better shown; and these consideraions point to the reason why one would of deem one-story buildings as well nited. Again, although a consistent mixure as 1, 2, and 4 may seem a hest ractice, economy may result from a oorer concrete in suitable parts—as, for xample, in the upper columns of the cetch, which, being maintained of similar coss area, this becomes unnecessarily eat on the topmost story. Where great ad is concentrated, as, say, 76 tons pproximately, on the ground floor lumns of our sketch, we may well emloy the richest mixture-2. 2 and 4ider rule 42, allowing a compressive ress of 750 lbs. per square inch.

#### ---HE ROYAL SOCIETY OF BRITISH ARTISTS.

The autumn exhibition at Suffolk reet, though noticeably less rich in lding works, and numerically than in Imer years, is fairly representative.

Hr. J. H. Amschewitz shows one of the t portraits, "Elspeth's Portrait" (23), a "Portrait Study" (146), and a s iewhat rollicking Bacchanalian orgy, come Fill the Cup, and in the Fire of Sing, the Winter garment of Repentate of Hing?" (199). Mr. A. J. Bryce has a ortrait of "Miss Walpole" (123), and a ther of "Senor Don Jose Garcia (11). with two other pictures, "Demolishir the Zandstraat, Rotterdam" (186), ar a "Spanish Gypsy" (207). Mr. II. (186).D is Richter's two flower-pieces are good. 'oses'' (155), and "Peony" (180). He ah shows two other works, "In Hyde Pik'' (124), and "Scocia" (145). Mr. Jon Muirhead's "Meadow Lane, In Hyde Lane, Highton" (126), is his best exhibit: "A Hyvest Field, Houghton" (28). "The Fa Gate Pit, Houghton" (201), and "he Two Windmills, Port St. Croix, Brges" (106), are all worth notice. Of there shown by Mr. E. A. Cox, the best is An Artist and His Daughter ' (127). MrRobert Morley is best represented by his' Autumn " (130), with its russet tints exclently rendered. Mr. Leonard Richmol has an impressive subject, "Rays of sight" (131), excellently conceived.

Mr. Leonard Richmol has an impressive subject, "Rays bean better with less sky. Mr. Pond, M.A. Instructor of Architectural Engineering at Columbia University (London: Oxford University Press, 85, 64).

Mr. Francis Blacks COn the Conway (132) is the best of his three, but The Lesser Orme, Llambelto (181), and Croesan, N. Wales (202), will gratify (181), and all lovers of Welsh scenery.

Mr. Frank Brangwyn, A.R.A., R.P.E., the president, contributes five suspects, "Avignon" (24) we like best, but "On the Terrace" (25), Milan (20), The Breaking I p of the Duncan (255). and "The Old Mill, Dixmude" (234) are all worthy of him.

all worthy of him.

Mr. F. E. Hodge has three good portraits, "The Tate Brigadier General Julian Hasler, killed in action April 27, 1915" (153), a "Lady in Fancy Dress" (151), and "Danstan, Son of the Late A. C. Curtis, Esq. (215) Mr. A. Currithers' two fandscopes, in Homer Woods Somerset" (157), and "The Woods, Somerset (157), and The Green, Burberry (212), are among the best, and he shows two more, at Brendon" (1) and "The Vale of Ayles bury from Whitehurch" (18). Mr. W. E. Biley only sends one of his always wel come seascapes this year, "The Tireless Tide" (88); his other subject is "The Chalk Road, Box Hill" (103). Two excellent seascapes are shown by Mr. Chris topher Williams, "A Lonely Shore (141) and "By the Sea" (135). Two very satisfactory portraits by Mr. Thos. F. M. Sheard are "Paula, Daughter of Stan-Sheard are Faina, Danghter of Stan-hope Spring, Esq. (145), and "The Rev. Hope Gill, M.A." (149). "In the Days of Cicero" (222), by Mr. Walcot, is good, and his "Estrance to the Doge's Palace, Venue" (224), is the best thing of its kind in the exhibition.

#### THE INTERNATIONAL SOCIETY OF SCULPTORS, PAINTERS AND GRAVERS.

---

The autumn exhibition of the International Society of Sculptors, Painters and the Grosvenor Gallery is Gravers at reasonably well up to the average, and there are not a few pictures of more than passing interest, and several of very real inerit.

Mr. W. Nicholson sends two excellent Indian military portraits, "Duffadai Rar Singh" (1) and "The Viceroy's Orderly" (33), both fine specimens of the gallant men who are so nobly doing their share in the defence of the Empire, and adequately well rendered. His "The Bull" (75) is a fine study of its subject, and "Tiger Skulls" (80) is a noteworthy piece of artistic osteology. Of Mr. Louis Sargent's three contributions we like "Carthew Beach" (73) best. We do not care thew Beach "(73) best. We do not care much for "The Sea" (78), a decorative cartoon. The undes are doing nothing suggestive of their habitat, and they hardly are of sufficient interest in themselves to

more polise the picture.

Mr. Walter Sickert's only exhibit.

"The Prussians in Belgium" (17), is somewhat of a mishomer. The man and woman might be of any decadent race, but scarcely less repulsive. Mr. John Lavery shows three portraits, Mrs. F. A. Konig (13), The Right Hon, Winston Churchill (22), and "Miss Jean Crombie" (51). Mr. Charles Shannon's "Autumn" (24) is a decoration well embodying its title, but hardly up to his average. Mr. William Strang. A.R.A., has three interesting works Cafe Bar" (4), "The Gipsy Girl" (26), and "In the Country" (38). One of the best works shown is Mr. William Rothenstein's only contribution, "A Little Boy Lost" (39). It tells its story well, and the structural adjuncts are excellently done.

Charles Ricketts M. nt. znm.c. Sacratic ing to the Sun (47) is good and as his Acis and Galabar (79). Mr. Damel Veresmith so its well with a lathres of hiworks, "The Spanish Stielen" (70), "The Cherus Girl (71), and Dinner Hour at the Angel (115) Miss Freda Macdonald has a really nice exhibit. Garden (54). Mr Charles H royd is entirely successful with his Saint entirely successful with his Saint Francis Preaching Poverty, thas ity and Obsolit nee (133) His etching of A Stormy Landscope (283) is a second Probably the general public would be more interested in Mr. Edmand Dalac's

clever carreatures, as exquisitely fining as they are models of good draughtsmanship Mr. Winston Churchill Loking for More Trouble (183) is hit in So the hife as he timidly offers the first four's of has newly discovered artistic familty to the somewhat supercitions booking director of the gillery. Mr. Elmund Dillac has well carne I a copyright of the many farure chances his versatile subject is likely to afford him; like Lord John Russell of old. Mr. Churchid having commanded the fleet to his own satisfaction, is as ready for anything ere the days come when he too will prefer to " rest and be thankful Scarcely less happy are the conceptions of "Inspector James Prode" (181), contemplating the ladders and flags in his land scape, or "Ivan Mestrovie" (184), work the away at the toe of a statue many sizes larger than himself

Among the water colours we liked "The Dining Room at 1. Dorset Street (141), by Mr. W. B. Ranken; "Hen<sup>4</sup>ey Re-gatta" (146), by Mr. William Monk? by Mr. W. B. Ranken; Henry Regatta (146), by Mr. William Monke Lamshouse (150), by Mr. W Lamshouse (150), by Mr. W LaBruckman; "Poppy" (206), by Miss Lily Blatherwick, and "Edgware" (211), by Mr. H. M. Livens,

There is not much sculpture of interest. Rodin's marble "Countess of Warwick (41c) is lent by its owner, as are heads of Ludy Cunard by Ivan Mestrovic, one in bronze and the other in

#### ENGINEERING FOR ARCHITECTS:

This is a very useful book, on right lines, worth the study of British architects in the regrettable absence of such a text book this side based on our own trade hardbooks. We have often insisted that there is no real need for an architect to puto. specialists to design constructive details, or to decide on the size of beams, guiders, column sections.

He ought to be able to do this himself:

and when he is, the results are consilerable saying to his elient, and much less lisk of failure of the structure. There is, or ought to be, no mystery about the matter, for co-knowledge of mathematics beyon's single algebra is necessary.

With that and such a look as this the solving of simple engineering too blons easy, and the design of structural members facilitate I to such an extent the diago. I many readers will gratefully realise i probably to the

ial a right to demand compensation from the committee. Since January, 1912, 122 mprovements had been carried out, and the and the committee for compensation which might have been enforced by arbitration proceedings were £55,387. By careful and persistent negotiation the amount had been reduced to £52,180 18s., a saving of £12.56. It must have required considerable is owiedge and skill to carry out that reduc in In addition, many proposals, under a dynamic of their engineer, had been

Mr. Francoube said the effect of the resultion was "Transfer to Mr. McKenzichte work now done by Mr. Yabbicom." But M. Kanzie would expect to be paid for it.

Eventually Mr. Ayles's resolution was rejected by 48 to 17 vetes

#### HOUSING PROGRESS IN LIVERPOOL

------

The with and policy of the Housing Committee of the Laverpool Corporation were received by Abdoman Hartord, the actings format. During the past year, he remarked, the reimber of back-to-back insanimarked, the number of back-to-back insani-tary masses had been reduced from 2.645 to 2.540. The committee could not deal more onekly with the remainder because of the nearth of empty houses and the practical of pouze in the effection by private enter-poise of houses for the power classes. The number of empty houses at a rental of over 5s of 1 index december which had dropped since 1919 it in 1.643 to 558, and a considerable number of these were of insanitary type. As number of these were of its and ry type. A-to the shortage of newly ere ted houses during the past five years out of 678 houses erected under a restal of £18 per amount, 384 renements erected by the corporation.

With regard to rebuilding work, there were three blocks of dwellings in course of erection, viz. in Gore Street, 18 three-roomed Avellings and 6 two-roomed; in Jordan Street 7 four-roomed and 24 three-roomed and in Sparling Street 16 five-roomed dwellings making 71 dwellings in all. This work had proceeded rather slowly, as the builders have been handicapped considerably by the shortage of labour, especially of the labour ing type. In response to the appeal of the try Conn. I to limit capital expenditure, the connuttee had only expended £16,000, though their estimates for the year amounted to £ 3,000. Steps, however, had been taken to represent to the Treasury the desirability of the committee below allowed to proceed recount of the advanced state of the buildings generally, and also for the urgent need of houses of this class in Liverpool at the buescut time. The number of dwellings under the control of the committee was 2,792. under the control of the committee was 2,792, and there were only ten vacant, though the direct robal robes than 400 applications. With regard to the other six schemes which the committee had in hand, viz. Prince Eiwin Street, Rathbone Street, Mason Street, Saltney Street, Blenheim Street, and Pearhyn Street, the greater portion of the properties comprised in these areas were purbased error to the commencement of the based prior to the commen ement of the tir, and as the remainder would have to be settled by an arbitrator, who would be arrownt d by the Loral Covernment Board, it is more than likely that further properlies would be indefinitely postponed by cat department.

The birth rate in the corporation dwellings

The birth rate in the corporation dwellings a visitivity as a strict rate of the exceptional figure of 56.9. The rufant mortility, however, was higher than it ought to be, but the downward trend continued. The general death-rate for all the highlings was 28.3, a figure which, although still too high, was very fay arable when continued and the bright with the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the strict of the stric st. It o might was very tax arrable when con-trasted with the rates of mortality which ised: obtain amongst the same people in their assentary surroundings. Turning to finance, Alderman Harford syel that the present net charge for the whole

fith, work was approximately equivalent to the way was approximately equivalent to 2.4 in the £ on the rates, or for rehousing the 1 to 1 to 1 approximately equivalent to 2.4 in the £ on the rates, or for rehousing the 1 to 1 approximately equivalent to 2.4 in the £ on the rates, or for rehousing the 1 to 1 approximately equivalent to 2.4 in the £ on the rates of for rehousing the 1 to 1 approximately equivalent to 2.4 in the £ on the contractor may have apply the 1 to 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 to 1 approximately equivalent to 2.4 in the £ on the £ on the same which the contractor may have apply the 1 to 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 to 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 to 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 to 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 to 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 approximately equivalent to 2.4 in the £ on the same which the contractor may have apply the 1 approximately equivalent to 2.4 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the £ on the 2 in the 2 in the 2 in the £ on the 2 in the £ on the 2 in the 2 in the 2 in the 2 in the 2 in the 2 in the £ on the 2 in the 2 in the 2 in the 2 in the 2 in the 2 in

1885 and 1891 respectively, will have been repaid. The corporation would then enjoy the unencumbered possession of the property which yielded a net revenue of about £2,000 per annum. This income would, in process of time, repay to the corporation its outlay in the cost and maintenance of these dwell ings, a point of overwhelming interest to the housing reformer.

Negotiations were pending, he added, with the Sutton trustees with the view of securing a grant for housing purposes in Liver-

### DEDUCTIONS FROM AND ADDITIONS TO PRICED BILLS OF QUANTITIES.

At their meeting, held on Friday last, the Metropolitan Water B and received a report from the Works and Stores Committee ing attention to the fact that paragraph 2 of No. 6 of the "Instructions to Tenderers" contained in the Board's Model Form of Contract includes the following:- The Board will not accept any tender wherein the tenderer shall have deducted or added any percentage or lump sum from or to any or all of the tems in any or all of the bills of quantities as priced by him." In connection with the construction of the pumping station buildings at Shortlands, the committee in-formed the Board in February last that the I west tender did not comply with the abovementioned instruction: that the prohibited practice obtained generally in the building made, and that the instruction should be waived in that instance, so that it might not present the acceptance of a lowest tender submitted by a firm whom inquiries had satisfied the committee were of substantial character and first-class repute. The committee have since had under consideration the question of retaining the instruction in its present form. In this connection they have obtained informatton from the London County Council, the Metrop dit in Asylums Board, the Royal Institute of British Architects, and the Insti-tute of Builders as to the practice adopted by them and have had the advantage of the opinions and experience of their mem bers who are conversant with the subject. appears from the information received from the Land on County Council, the Metropolitan Asylums Board and the Royal Institute of British Architects that the practice of adding or deducting a percentage or lump sum is by or deflucting a percentage or tump sum is by body state that while the existing Institute form if contract does not deal with the matter, yet one of its committees have drafted a clause to meet it, which may become public in due time. The committee are solvised that the present instruction is quite expensional in contracts, and is creative of exceptional in contracts, and is creative of difficulties for tenderers, as well as bringing about a disinclination on the part of tractors of good repute and standing to tender for the Bourd's works. After giving the matter careful consideration they had arrived at the conclusion that the practice prohibited by the clause in question should mitted, and therefore recommended

a That paragraph 2 of No. 6 of the Instructions to Tenderers included in the Board's Model Form of Contract be deterni.

the That the following paragraph be inserted in the "Instructions to Tenderers in the Board's Model Form of Contract:-

In tenders for (a) engineering works or h) contracts combining engineer engineering ing and building works or (c) works of building construction, a percentage but not a lump sum) may at the discrebut not a lump sum) may at the discretion of the tenderer be deducted from or added to all or any of the items in all or any of the priced bills of quantities, and in ascertaining and certifying the payments to be made to the contractor, such deduction or addition will be applied to all work which, in the judgment of the engineer, has been executed under the item, series of items, bill or bills of engineer, has been executed under the item, series of items, bill or bills of quantities or the whole contract as to which the contractor may have applied such deductions or addition."

Mr. O. Loughlin has been appointed engineer

### SANITARY FITTINGS IN WORKING-CLASS HOUSES.\*

By Joseph Weekes, Burgh Surveyor, Irvine Take the average tenement house erected in our cities within the past few years. It is quite a common thing to find in the two or four roomed house (i) a bathroom apartment with water-closet and wash hand basin. and (2) a small scullery, sometimes provided with a wash-tub and boiler. In other houses the scullery is omitted, and the sink is to be found in the kitchen window. In others, again, there is no bathroom, but a welllighted and ventilated water-closet apart-ment. Take, again, the housing accommodation of our poorer localities. We find the common water-closet and common washinghouse still in evidence, and the number of sanitary appliances reduced to an absurd minimum. I cannot understand why the common water-closet should be tolerated at all in new properties.

Of course, we all know the plea that the water-closet outside the house is better for the health of the dweller and his tamily: but is it? It so, why go on perpetuating the inside closet in our dwellings at ad? What is the result of the outside closet? the "night-mail the "night-oai," in many cases. Can anyone blame the us, of such when perhaps a long passageway has to be negotiated, or a journey has to be made down the stain and across the court with the temperature below zero. as often as not to find the apartment occuas often as not to find the apartment occu-pied, or that it has been used previously as "a smoking parlour," with all its expec-torations on the floor, or in such a filthy condition through the habits of one or another of its past users as to be unusable?

. . . But what of this condition of things during times of illness in the household?
There is no disputing the fact that many of the loathsome orders of disease and affliction found among our poorer classes can be traced

to the common water-closet. The modern cottage and small flatted house do not, or, rather, ought not, to present the same difficulty with regard to the planning of their sanitary apartments compared with the tenement. There is generally plenty of ground, but can it be said that we are improving the planning of our cottages in one respect? Since the English type of cottage has invaded our Northern clime it would seem as if a backward tendency had crept into the planning of our small dwellings. The chief aim is evidently to gather the triviage and fittings closely together. The idea is all right in one respect-that of concentration-but it can be carried too far, the detriment of the comfort of the dweller. Take the average cuttings elected under garden city anspices. "Every modern conmeans in most cases the sculleryvenience washing-house-larder-bathroom washing-house-larder-bathroom and water-closet apartment—a most peculiar combina-

Before entering into the merits and de-merits of the scullery with its combination of fittings, let us consider the kitchen and scullery apartments generally, as we find them being erected around us to-day. In the tenement house the scullery-wash-house is a great acquisition, some will say; but it is not every worker who can pay for this necessity. Others may call it a luxury. Of course, in the cottage home the scullery and washing-house apartment is nearly always to be found : we expect it. But in the tenement dwelling the sink and wash-tub are oftenest placed in the kitchen window. Now, we all know of the presence in working-class houses of a hed or beds in the kitchen. Workers who sleep in their kitchens, containing sinks with rotten and decaying woodwork (for it 's still common to have sinks and tubs woodlined), and perhaps a dirty siphon trap, or grease-choked overflow only a few feet from the bed, or who have to inhale while asleep the effluvia from the contents of a tub of clothes put to steep, or the vitiated air folbwing on a day's washing in the kitchen, are not getting a fair chance. Even should Even should there be a common washing-house, is it possible for the mother of a young family o leave her children alone in the house while

\* From a paper read at the Annual Congress of the Incorporated Sanitary Association of Scotland,

she does we would be to be as in the kit here. On the question of the combined rates constant buttered in the autocurset and buttered, apartment some autocurses go the language of raying that mader no conditions stand the water coset and buttered. Formy general, this is no sweeping to attempt to a do in the water general to attempt to a do in the water last and the water closed would be builded in the same apartments for the butte and the water closed would be builded in the time.

noise separate apariments for the battle and the water closel would be bordering on the extravagant and rightallois.

In the scuttery of the cottage of today you will often find a battle starting for a corner of the one of graph attack from whom a factor be found near to the reduce, from whom a parameter is a supercontrast of the form of the search from whom a parameter is a supercontrast of the form of the search from whom a parameter is a supercontrast of the search from which is supercontrast or the search form who are the search form when the search is supercontrast or the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form when the search form w to be found near to the roote. Itom who is a draws its supply of hot water. A langed cover presents a good take top view the bath is not in use, which, in its turn, often hades a wasning of daity clothes and various other articles. In other cases the nath secondaried in a employed and made to have contained in a employed and repaired to according these expedients. We require privacy while bathing, and how can this be obtained without a property partitioned if Vary whose battning, and how can this to obtained without a property partitioned it apartment? The ejen bath may answer its purpose quite well in the heavened est out a family, or three the conditionate going; but the observing of camin in deemy trues be the first aim in the family life. We know that in many industrial behinds a both is a necessity after a day's to,", and I wan leave to your imagnation to confine up the feel mass of a father or so wan loss to long of 10.25 of a father or son who has to take a daily bath under such conditions. Even it. for economic reasons of hot water supply from washing boder, the bath is put in the sculery, I cannot understand why it should nor be partitioned off.

The sentery wards has besides a fact, water caset is a so very object woulde. The sendery is the hule of the whole house, for in it is done both preparing of tool and culmary work. Do our planners of cotages ever consider the repugnance of the idea of a meal being prepared in baking being done a meat being prepared in baking using maxim an apartment comprising water closed accommodation? In this style of house the kitchen really as the principal holdey, and as a sleeping apartment its privacy is reas a sleeping apartment its privacy duced to a faire.

The water-desir apartment is, again, often found placed outside the honse, either 1 at the link door, entering off a small porch formed by the scallery door, or 2 at the side of the back door, entering direct from the outside, or 3 on an outhouse, away trom the main brieding entirely. It may be said in tay or of No. I be the closet can be entered and but by the way of the buck door; but this is not always convenient. especially little durk, and here, again, the kitchen as a passageway enters into the urginion. As for the other two arrange regiment. As for the other two arrangements, the only taxourable point is that one closet is provided for each it is, but the main objection is that the pion encourages the use of the commode. Generally, these three latter arrangements present definite examples of bad planning, the underlying idea evidently being that, so long as suntary accommodation to the ayded, it matters not where; but it must be cheaply dure.

I am sorry to say that there are types of houses being erected, especially a our ministed centres, which are of the impossibleinstead centres, which are of the impossible-to-alter order, so tar as the situation of their sacitary amortments are concerned; but I cannot deal eath them within the limits of this paper. My endeavour is to show how certain types of plans could have been altered, and, to my mind, improved, at very lists, and increase in little cost, involving lattle or no increase in rent to the tenint. They are il houses of the kind for whole there is a demand at present, and for whole good rents are to be

In the meantime indications point to our local anthorities having to tackle the housing problem themselves, as private enterprise is not keeping up with public needs. Let it dispositi . d

Chad's Church at \*Horninglow, Burton in Trent, for the late Lord Burton, the defendents in the action were Hagnet Georgina. Downger Lady Burton, Rangemore, Burton on Trent, Mr. John Arthur James, Grafton Street. c tract error for which was £19.559. The defends term the action were Harriet Georgina. Downger Lady Burton, Rangemore, Burton on Irent: Mr John Arthur James, Grafton Street, Lend, in M. John Gretton, M.P., Emissioner Gardenes, London; and Mr. John Lambuck, Statter Road, Burton on Trent, joint executors under the will of the late Lord Burton. Mr. A. A. Hudson, K.C., with Mr. Disturnal, K.C. and Mr. Leshe Scott, K.C., with Mr. Giblions and Mr. Leshe Scott, K.C., with Mr. Giblions and Mr. Bethune, was for the defendants—the action involved an enominous mass of details, the idealness occupying four bound volumes of from 100 to 270 pages each.—Mr. Hudson, K.C., in his opening, sail the claim was upon two certificates given by the architect under a bailding contribet. In 1904 Lord Burton desided to find a cauch at his own expense, and the designs were made by the late Mr. Gosenze Frederick Bodley, R.A. The designs having been approved of, it became necessary to form a contract. Then it appeared that a Mr. Conclinian who approved of, it became necessary to form a contract. Then it appeared that a Mr. Conclinian who approved of giving linimover to successed to have his name inserted in the specification for the nurpose of giving linimover to successed. Mr. Grover was the quantity sirvey r who prepared the quantities for the purpose of the tee does. Various modifications in the glaintiffs tender had to be made to bring the purpose down to the figure which Lord Burton was prepared to pay, Lord Burton had, in the meantine, prepared the foundation for the church by his own men independently of the planntiffs, and this some what delayed the work. The contract was entered into in November, 1916, and the contracts were only able to start work in May, 1907. Directly after work was started difficulties arese with Mr. Conclinian, who was engence to Messey, Bass and Co., as to the entered into in November, 1915, and the contractors were only able to start work in May, 1907. Directly after work was started difficulties arose with Mr. Couchman, who was engineer to Messrs, Bass and Co., as to the quality of the stone, and that on two or three or assents stepped the work. Mr. Cecil G. Hare, Mr. Bedley's partner, had the immediate charge of the work, and he disagreed with Mr. Couchman in his condemnation of the stone. These distorts resulted in difficults and delays These distincts resulted in difficults and delays, as a fresh quarry had to be opened to procure the stone required. Not only did Mr. Cone iman assume great powers in reference to the stone, but he also made consideral le alterations in the place. The church was entirely of stone, for distinctions and the consideral control of the distinctions of the characteristics. stone, but he also mane considerate anergamens in the plans. The church was entirely of stone, faced inside and out, and he gave extraordinary instructions as to how the work was to be carried out. He was an engineer, and the result was that it was an engineering instead of a church job. Matters were, however, smoothed over to an extent. Ford Burton died in February, 1993, and Mr. Palley in Ortoher, 1993, After Lord Burton's death Mr. Conchman again raised difficulties but ultimately the work was completed in Mry, 1999. It should have been fixed a claim to the trastors for the interference so for as the condemnation of the case the Court would not be troubled. Mr. stone was a corned, but with that next of the case the Court would not be troubled. Mr. Grover, the quantity suverence to do up the work of valuation for the first so of the extras, and they are ented to £1.72. Mr. Combanin had been invited by Mr. Grover to at and the valuation, but he did not arranged to take done anything. Directly the voluntees to take done anything. Directly the voluntees was made, however, Mr. Combanin before two takes to take definition again, and in the result of Aral 1911, the blunteff obtained a cert fixet for £3.560 and upon that confidence to a rise was brought. the drive of clined a cert hate for £5,500 and upon that cornifects the etion was brought. It was not known from the con espandence that Mr. Can amage had taken agon bimself the duties of quantity surveyor, but if ex knew row that dishe tes were occurring between Mr. duties of quantity surveyor, but if ev knew row that dish to swere occurring between Mr. Grover and Mr. Concinnational between Mr. Gretton and Mr. Hare. It appeared that in the end Mr. Grover was induced to revise his valuation, and he reduced it from £7,790,198, 9d. to £6,618,7d. The second valuation was made without any reference to Mr. Willcock. In the meantime, plaint if and from pressing for navment of the £3,519 contined by the architect but not a penny of it had they been able to 20%—Mr. Hudson, K.C., continued his eventral speech on Wednesday.

nearly the whole of the day being occu pied in reading correspondence between Mr. Conchinan and Mr. Cecil G. Hare, the architect, and Mr. Conchinan and Mr. Concuman and Mr. Conchinan and the architect, and Mr. Conchinan and Mr. Glover, the quantity surveyor. He remarked that Mr. Conchinan appeared to have been tempted to interfere with the work Mr. Leslie Scott, K.C., for of construction. Mr. Leslie Scott, K.C., for the detendants, objected to Mr. Hudson mak-ing slapdash observations, but said he would ing slapdash observations, but said he would have something to say on that matter later on. In regard to the correspondence with Mr. Hare, Mr. Scott said he supposed that gentleman would be called by Mr. Hudson, Mr. Hudson said he was not going to call min, as he was defendants' witness. Mr. Scott said he would not call him. During the course of the action on Friday the learned Refores said it snowed to him that the past. Referes said it seemed to him that the position of the case was that defendants were entitled to show, if they could, that what were called "extras" really represented were called "extras" really represented work done within the contract. Mr. Hudson K.C., said he did not dispute that. The Referee said the defendants, on the plead represented Ir. Hudson, ings, were not entitled to say that the work claimed to have been done was not done, claimed to have been done was not done and they could not say that those things claimed as extras were not authorised. Mr Hudson said that those were his points Gibbons said he agreed. except with recard to the second point. The Referee said in his opinion the question whether the work the discontained and the work of the pleadings, the only paragraph which could have raised it having been struck out. Mr. have raised it having been struck out. Mr. Couchinan, who was apparently there during the whole of the time, did not in his affidavit say that the work was not done. Mr. Gibbons, K.C., applied to be allowed to amend the pleadings. Mr. Hudson, K.C., objected, as the amendment would result in a further delay of the long-tending trial. The Referee said he felt bound to allow the amendment to be made upon conditions. After an adjournment, Mr. Gibbons said that having been unable to get into communication with either of the executors he was in the position of not being able to say whether or not he would be prepared to ask whether or not he would be prepared to ask for the amendment. The case accordingly stood adjourned until Monday in next week, the 25th inst., upon the understanding the the defendants paid the costs of the day.

the defendants paid the costs of the day. WOOD FLOORING CO v. TRAVELLER.—Mr. Verey, one of the High Courts Official Referees, concluded on Friday the hearing of the action brought by Mr. William Barry Greger, trading is the Zete Wood Flooring (Stratford) Company, against Mr. A. S. Hesford, a commercial traveller, of Victoria Road, Stechford, to recover £1974s., balance of account for work done and materials supplied. The claim was admitted, but defendant counter-claimed damages for alleged breach of agreement, for less of commission, and for the expense of several visits to London made by the direction of plaintiffs. The admission of the debt threw the ones of proof don made by the direction of plaintiffs. The admission of the debt threw the onus of proof muon defendant, who alleged against plaintiff that he had failed to afford the necessary information to enable defendant to ascertain the amount of work done by him and the commission due. The Referee found there had been a settlement in September, 1913, and there had been no refusal to allow defendant to have access to the books. The defendant had failed to prove his case, and there would be judgment for plaintiff on the claim and counter-claim with costs.

-Messes Carrero and Hastings, Boston, Messes, have compileted plans for the chemical laboratory of the Johns Hopkins University at Homewood, Baltimore

Mr. W. Ingham, formerly water engineer at Terquay, now chief engineer to the Rand Water Board, has been elected as president of South African Institution of Engineers.

Witer Board, has been elected as president of 1.8 suth African Institution of Engineers.

The Postmister General has presented to the Cur. Cornoration for the Guildhall Maseum a number of the Roman antiquities including turner curs of Samian ware and fragments of Samian porters and painted plaster—recently found at the site of the old General Post Office. St. Martan's leGrand.

On Samelay week the Bishop of Winderster increased week the Bishop of Winderster increased the consecration ceremony of St. Cuthhert's Church, Copnor, the fifth of the six new churches provided for out of the Bishop's £50,000 Portsmouth Six Churches Find. The church cost £11,000 of which Medican Harrison, of Petersfield, gave £96.6, in addition to the organ and some entique panelling for the sanctuary. Mr. E. Starley Hall, M.A. A.R.I.B.A., of Bedford Square, W.C., was the architect.

### Currente Calamo.

Probably the capriciousness of the effects of the bombs discharged over the "five areas" in last Wednesday's Zeppelin raid will have surprised most of us who have had the opportunities of examining the scenes of destruction more closely than the general public. It is difficult to say more without specifically pointing to instances of what we mean; but it is obvious that in any future attempts to modify construction with the view to rendering buildings bomb proof this will have to be taken into account seriously; and, moreover, that it will be as necessary to study the dangers to our roads, and the gas and electric mains, and other services beneath them, as well as those to our structures. As regards the latter the latest developments of German barbarism have suggested ideas which we shall endeavour to explain next week, which may be suggestively useful, and which we should he glad to see criticised by others. The matter is a pressing one, and might well engage the attention of architects and engineers and those who are responsible for invitations to them to communicate then ideas to the various professional institutions, the paper-lists of which, so far as we have glanced at them, scheduling not a few other things that can very well stand over till more tranquil times.

In a letter to manufacturers, Mr. Lloyd George says he is encouraging a scheme for giving a short course of training in technical schools to applicants who undertake to work whole time in munition factories on the completion of their course. He says:—"No attempt will be made to produce skilled engineers, and the training given will differ materially from the ordinary educational training given in technical schools in normal times. The whole object of the Minister is to have a certain number of people who would otherwise be entirely unskilled taught the use of tools, and to have them trained, as far as the equipment of the technical school permits, in performing a specific mechanical operation. Such men and women would still be at most semi-skilled workers, but they should be far more useful recruits in a munitions factory than workers who have never used a tool. Every effort will be made to select for training men of intelligence, and only those who are likely to make satisfactory munition workers will receive a certificate at the end of the course." The idea is rather vaguely stated, and as only men ineligible for military training are to be selected it would appear that they must be handicapped, either by age or physical disqualifications; but we must wait and see what the proposed " short course " is before saving more.

Several members of the House of Commons are determined to ventilate the grievance which has been caused by the recent decision of the Treasury to dismiss the whole of the temporary staff of land valuers. It is recognised that very little has reached the Exchequer as a consequence of Mr. Lloyd George's excursion into land-taxing in his Budget of 1909, while it has cost very much more than any resulting revenue has been worth. That, however, is not the fault of the temporary staff, all of them skilled men in the work and engaged under the implied understanding that the tax had "come to stay," and some quitting other positions in which they were established so as to secure what so many desire, a position under Government. As it is alleged that, in cases of which details can be furnished, unmarried men eligible for the

<sup>&#</sup>x27;An interior perspective of a chanel in St. Chad's, Hornenglew, appeared in the Britishs. News for June 2, 1305.

Army are being retained in this particular ser vice, while married men ineligible for the Army have received notice of dismissal, the Financial Secretary to the Treasury is to be questioned on the whole matter.

Under the scheme for assisting architects and surveyors whose practice has been brought temporarily to a standstill owing to the war. to which we have previously referred, four applications for survey work have been granted in the Manchester district and one in Laver pool. The main objects of the Laucashne sur vey are-(1) To promote the health of the community, (2) to improve the commercial fac, lities of the county; these boons being pri marily sought by means of more open spaces and better means of transport. The hon director for Lancashire (Mr. L. P. Abercrone bie) is being valuably assisted by Mr. Isaac Taylor (Manchester). The idea is a practical and timely one, and we heartily commend it to other authorities.

The trouble caused by landleads raising the rents in munitions areas, first heard of in Glas gow, has extended to London. Vigorous pro tests are being organised, and tenants' profeetion societies are being formed in many dis tricts. Mr. Lloyd George's promise of an immediate inquiry and his statement that the Government will, if necessary, take powers to deal with the situation are not much believed in! Mr. James Rowlands, who taised the matter in the House, and has forwarded some details of increases to the Prime Minister, states that rents are being raised all round in the London munitions area—in some cases by as much as eighteennence a week. The owners of a large estate in Canning Town hase sent their tenants a demand for an extra sixpence a week, accompanied by a formal notice to quit. Tenants who make difficulties are being forced to leave to make way for more accommodating persons. At Dartford, where the housing problem is specially serious, Judge Parry has intervened on the side of the tenants by refusing to grant ejectment orders. He has laid it down that if landlords want to turn out tenants who are munition workers they must appear themselves and give their reasons. The plea of agents and owners in most cases is that they are compelled to raise the rents in order to meet the new Budget burdens. Others allege that mortgagors are raising the interest on mortgages, and then there is also the extra cost of aircraft insurance. At the bottom of the whole matter, of course, is the present dearth of houses all over the country.

An interesting and sensible proposal for honouring the fallen was made by Mr. George Kirby (the York Museum curator) in the course of a lecture last Wednesday. Mr Kirby said the ordinary statue and tablet memorial should be superseded by designs conceived from a lofty patriotic impulse, and which would at the same time serve some useful purpose. He suggestel noble buildings, suitable for advancing arts, sciences, chemistry, crafts, manufactures, machinery and various other industries, as well as leeture and concert halls. They should be majestic in design and artistic in embellishment, selected from competitive designs suitable for local requirements. They should represent scenes and subjects of hero'sm and battlefield bravery, chiefly (for York) gallant deeds done by sailors and soldlers of York battalions and individuals. To advocate the battalions and individuals. To advocate the provision of several small and useless memorials would be to throw away money. To drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures are drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as the imminent danger drastic measures as

loyalty and sacrifice of present day e tizens and meritorious memorials of the brave defenders who suffered for the honour of England, frome, and Empire, Wivery heartify endorse the riba - Far better than frittering away tonals on the stock memoreals of the mason's yard, and other poerdithes, would be the co-operation of all the actin the erection of really useful and creditable memorials of the appreciation by their fellow countrymen of the heroism and self-scriffice of the Emperc's heroes

In yesterdiy's Donly Telegraph, in timely and interesting article on " Venue Proserved." Sir Clinte Phillips describes the precautions that have been taken to protect St. Mark's and the other treasures of the city and trenehantly contrasts them with the apparentindifferences from own authorities to the possible fate of some of our own great monaments. Wirit, he asks, have the guardrins of Westmarster Albey done? In the centre of Henry VII 's Chapel the great tomb of Henry VII and his Consert, by Torriginio, still remains utterly exposed, and it is, more over, encircled with a venitable forest of most inflammable woodwork, in the shape of carved and tretted stalls, with all their accessories and the decaying barmers which project from them. What the explosion of an incendency bomb here would men a we leave to the inergunation of our realers. It would very possibly entail the destruction not only of the whole chaps, but of the whole Aldsey. And then there are in the choir of the main church tombs even more precions to England; a group of Royal sepulchres which are without parallel at present in Europe. Are we to attend absolutely nothing to protect the Sheine of Edward the Confess of the tombs, so precions artistically as well as historically, of Henry III., of Eleanor of Castile, of Edward I., of Philippa of Hainardt, of Edward III., of Richard II., of Henry V. of William de Valence and Aylmer de Valence? Are we to look on impassive and inert, leaving it to Fate to decide whether a most precious heritage of the Auglo-Saxon race shall be utterly ruined and obliterated? Are we here again to be told to "wait and see" await, it may be, some hideous catastrophe, some awful enveloping destruction by licking tongues of fire of all that we hold most precious, most vital as a record of our country's greatness?

He appeals forcibly to all interested, to all concerned, to make themselves heard, " Let them speak, even if there be no comfort in their words; let them speak, even if it be to confound us. Have the universities no word to say on such a subject as this; or the Royal Academy; or the corporate bodies of architects; or the British Academy; or the time bonoured societies for the promotion of art and seterce? Why do the Society of Antiquiries the National Art-Why do the Collections Fund, the Burlington Fine Arts Club remain mute and officially unrespon sive". How fittle will their activities appear in the future of now, at this moment of supreme anxiety, held back by trivial considerations of routine and etiquette, they are content to look on as mere spectators while risks are run which may result in irreparable disaster. The men in authority who, through irresolution, through lack of courage to take the initiative and throw down merely

and in the e-teem of the fellow country men, will be held to have betrayed a most sacred trust, and their great refusal will be recorded against them, and for ever remain bered in fatterness, by their boother."

AINTED DECORATION IN THE COUNCIL CHAMBER OF THE INSTETUTE OF CHARTERED ACCOUNT ANTS, MOORGATE PLACE, E.C. PAINTED

AMAS, MORIGIATE TRANSPORTS, 18, by the pair of large have a partial view canvas hedded on alls. The motif of the morphists the door "Science Bringing Objects Commerce"; walls. is "Science Bringing Octor to Commovee"; of the one over the doce. "The Tramph of Law." The architectural background is more or less a repet too or the architecture of the Council or the architecture. more or less a repet ton of the architecture of the Council Channeer. Figures about life-size. The rest of the decoration is painted directly on the wall. There exer at top is filled by the signs of the Zelhac. The four pendentines are in guisalle—dustice. Prudence, Wislam, and Truth. Over the bust of the Queen is a treatment of the Royal Change field. Charter of the Institute. The accompanying plate has been reproduced from the beautiful water colour shown at the Royal Academy Exhibition this year by the artist, Mr. George Murray, of 10, Girdlers Road, W.

XHIBITION HALL, AUSTRALIA HOUSE, ALDWYCH AND STRAND, EXHIBITION

The Exhibition Hall occupies the central portion of the ground floor. It is intended for the display of the produce from various States in the Commonwalth. The hall is in itself one of the exhibits, as its walls and floor are of Australian marble. Throughout Throughout the building Australian marble and woods are being employed in the interior finishings, general plan of this important stone building. now advancing on all four siles, was given in The Bullding News on July 4, 1913, imme-Jiately prior to the laying of the foundation-stone by the King. We also then gave a general perspective extensor view from the Strand, looking north west, where the Gladstrand, nooking north west, where the Gladstone statue stands, on an island west of St. Clements Dane's Curreb. The architects are Messrs. A. Marshall Mackenzie, LLD., A.R.S.A., F.R.L.B.A., and A. G. R. Mackenzie, F.R.L.B.A. The builders are Messrs. Dove Brothers. The section below the accompanying view of the Calcium Language. accompanying view of the Exhibition Hall is secondarying view of the Exhibition than is very interesting, as it shows the columned lantern rising through the floor above, with gallery round, giving light, and adding a flav architectural effect to this mornimental interior, with its vaultings carried by de-tached columns and piers below a very massive entablature, in one consistent order throughout.

### ST. PETER'S, ROME, FROM THE STRADA DELLA MURA

This charming pencil drawing by Mr. Fred Richards was hung on the line in the "Black and White Room" of the Royal Academy this year. It forms part of the set of illustrations of "Rome" in Messrs. Adam and Charles Black's "Artists' Sketch Book Series," and the high standard of these little handy and artistic volumes may be gauged by the merit of this example which we have reproduced from the original pic we have reproduced from the original pic-ture placed at our disposal by the owners of the copyright and the artst. The book devoted to "Rome" comprises twenty four similar studies, all of which possess the quality of heal atmosphere, and their access quality of feed atmosphere, and their accessories are fittingly sub-reduced. The sub-released, without being over-upd acts of, have the charm of freshness of view of the unassumingly handled and delineated with precision without pandering to the popular parade of the ordinary guide-book. Each drawing is valuable as a portrait, and all are considerably more interesting than photographic reproductions. Notwithstanding their great reduction as compared with the

tary's reen ir colonnaded frontispiece which asks the tagade as built in 1500 from the Program of S. Pretro. The dome was elected during his lifetime, but the landern survivous tine great cupola remained to a limithed after his death, and this was likely est in accordance with Michael Angelie's pains. The choir end of the list edral appears still very much as he ies gived it, and a reference to a former classification given by Till Bullious Kilws of this front may be useful as showing the front may be useful as showing the psidal treatment perhaps more clearly psidal treatment perhaps more clearly than the present study. We refer to the freely fravin pencil sketch lent us by Mr. Walter Keesey, A R C.A. when he was Fravelling Student of the Royal College of Art. It appeared in our issue for August 25, 1911. The point of view he adopted was rather remnon, being chosen to illustrate the capora and chapels as seen from the hell to the rear of the Pontial Busilian, and for that reason the pleture possesses pot are possesses a special interest. The capital little pocket book on "Rome." to which we are directing attention to day, teludes a sketch of St. Maria di Loreto trom the Piazza Venezia. It will be remenabased that there are two churches on the north side of this open space. That on the fight, shown as "Del Nome di Maria." 112) t. shown as "Del None di Maria," was begun in 1507 by Antonio da Sangallo was begun in 1507 by Antonio da Sangallo, jour. Trajan's Column, of course, comes it's the picture though another plate is very fuely devoted to its individual illustration, and necessarily shows the same charch beyond. A very scholarly drawing a given of the Partheon, the only ancient state of preservation. Its lustary is familiar, and readers will recall the enument fact of its consecration as a Christian church by Pone onsecration as a Christian church by Pope structure as a thristian curren by cope B andace V in 609, after which time the structure was known by the ecclesiastical arise of "8". Maria Rotonda," The Castle of St. Augelo, one of the most tamiliar obwets in the city with its well known bridge approach reeds no more than a passing men tion by way of alluding to another of Mr. Fred Richards' sletches, and as showing Bermin's statues of angels standing on the baston piers. Though these figures in themselves are somewhat indifferent as examples of the plastic art, they really do look extense, the plastic art, they really do look extense, the in sharp perspective leading open Hadrian's Tomb, in contrast to which they turnish a beatting foil and serve which they timish a behtting foil and serve to show the value of heroic sculpture. Plate 7 gives a tiver view of St. Peter's, and in the maille of the pattice or us the spandrel to the leafter and a girder bridge over the Tile. The address these first heat can be girder bridge over the cities of the service of traff, by the touch of The Procedure recognity is moderated with at the southern recognity is moderated with at the southern for the art stock table pencil. All the same it is very convenient to have ready to hand a tew dates for reference on the spot, and these might quite well have been added to the index of plates without increasing the bulk of the volume, and so avoid the necessity of carrying about an ordinary "guide" in the pocket in addition to this sketch book.

#### ST. GARRIEL'S CHURCH, PLYMOUTH,

The nave and aisles of this church have a cently been finished. The drawing shows the complete effect after the erection of the The site is a sloping and irregular one, which has permitted the erection of a large parish hall, as well as vestries beneath the main fabric. The staircases and ap-proaches to the upper floor will form an item of interest in the whole scheme. tect is Mr. W. D. Caroe, M.A., F.S.A., F.R.I.B.A. The drawing now reproduced was in the Royal Academy this summer.

#### HISTORIC BUILDINGS DEMOLISHED BY THE GERMANS IN BELGIUM: AN OLD GABLED TIMBER HOUSE IN YPRES.

In our journal for October 6 last we gave two sketches made in Ypres and lent us the artist, Mr. Robert C. Kennard, as illustrating examples of the characteristic architecture and old domestic buildings of that tamous and beautiful, but now ruined, Belgian town. During the past year the place has been reduced almost to a veritable heap of ashes. Now only a few runs are still standing here and there to emphasise the vandalism shown by the relentless bombard-ments of the cruel German invaders. Their wanton disregard for historic architecture and their murders of civilians, young and old alike, are abundantly manifest wherever their armies have gone. It is not necessary to say more on that self-evident page in the history of this war. In all previous wars in which the Germans have taken part they invariably, as in 1870, displayed a similar barbarity, though never before on so large a scale. We printed a few particulars about the subjects of Mr. Kennard's artistic and excellent studies before published as above mentioned. There is not much to add about this typical timber-framed old house, with its picturesque timoer-framed old noise, with its jucturesque gable and oversailing stories. In all likelihood the building has entirely perished, and most probably it burned to the ground very quickly. The steps in front lead down to the entrance borway, placed at a considerably lower level than the side walk. The artist says he knows nothing of the history of this house. The sketch depends entirely on at architectural character, which gives it much interest, though the effect of the building was by no means improved by the adjacout modern business premises, part of which necessarily comes in the picture.

#### LION'S HEAD WATER SPOUT FROM GIRGENTI, SICILY.

to the National Museum at Palermo there is a special gallery, known as the Sala delle Metope, and in this room are housed most of Metope, and it this ream are nearest most of the prime treasures of that exquisite and valu-able collection. These chet d'ouvres comprise the far raised Metopes from three of the Dorre temples of Selmanto, All these examples belong to the earliest period of Dorie sculp-ture, and the oldest of them must have been carved soon after the foundation of Schius, n.c. 623. They are strongly conventional and stiff in treatment, but their chief interest conists, popularly speaking, in the fact of their ists, popularly speaking, in the fact of their hords since of the most ameant attempts extant in composition, as well as striving after are expression of 15c and movement. In this since gallery are preserved several noble fragments of lions' heads and the 1 kc from Humon. We give to day a fine fold detail daving, executed on the spot in red chalk, horing a splendfid water spout lion's head It was sketched from the original ost index of the council that it is a smooth from Gazenti, where once stood to general Greek city of Acragas, founded by don't from Gazenti, where once stood to general structures there to day may still be found the remains of a series of temples, and I kewise the Tomb of Theron.

The foods head thus illustrated came from Government Beard for sanction, which was refused or greeness (it comes to be covernment Beard for sanction, which was refused or greeness (it comes to be covernment Beard for sanction, which was refused or greeness (it is not be found to the found the remains of a series of temples, and I kewise the Tomb of Theron.

one of these temples, and we are indebted to Mr. Alick G. Horsnell for this sketch, The same collection contains two celebrated Etruscan rams' heads in bronze from Syracuse. One and all of these things are powerful conceptions, bold in form, big in their sense of scale, and admirably suggestive for modern monumental buildings. They belong to the mythological family, "well worthy to carry Phryxus and Helle." This lion's head carry Phryxus and Helle." This lion's head detail, on its merits as a design, will be much appreciated by our readers, because it is a beautiful specimen of fine conventional conception, based upon exactitude of treatment, at once recognised as being in direct contradistinction to the feeble naturalesque tions prevailing pretty generally till lately among modern sculptors and designers of architectural metal work, both at home and disoud

The Madras Government have secured the services of Mr. H. V. Lanchester, vice-president R.I.B.A. for town planning. Mr. Lanchester is due in India this month, and has been engaged till March, 1916.

The Government have acquired the freestone quirries of Corschill, Annan-the largest free-stone quarries in the South of Scotland-which have been in the occupation of Messis, Murray and Sons for fully forty years.

The seventeenth list of Members, Licentiates, and Students of the Royal Institute of British Architects who have enlisted in the Army or Navy for the period of the War gives a total to date of 45 Fellows, 339 Associates, 174 Licentiates, and 216 Students.

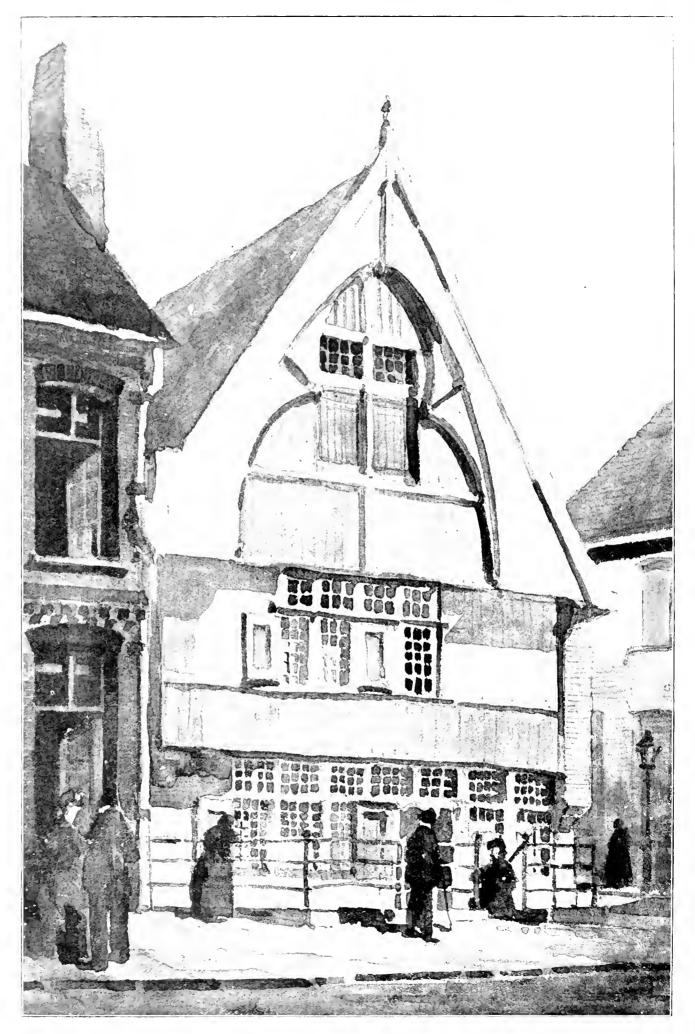

A report has been submitted to the Manchester Corporation Finance Committee on a scheme for the provision of cooling water at the new electricity generating station at Barton. Sanction has been received to the borrowing of £10,750 and £4,730 in connection with the new station.

The new buildings of Cheshunt College, Cambridge, were occupied last October, but on account of the war there was no formal open-ing ceremony. The Governors, however, have ing ceremony. The Governors, however, have now arranged for an opening commemoration on Tuesday in next week, the 26th inst. The debt on the buildings now stands at about £4,500.

In connection with the opening of the Edinburgh College of Art for the winter session, it is announced that 202 members of the staff and students are serving with the colours, fortyone of whom hold commissions. A fair pro-portion have already seen service at the front, and of these twelve have been killed and seven-teen wounded. One student who held a travelling scholarship is still interned in Germany.

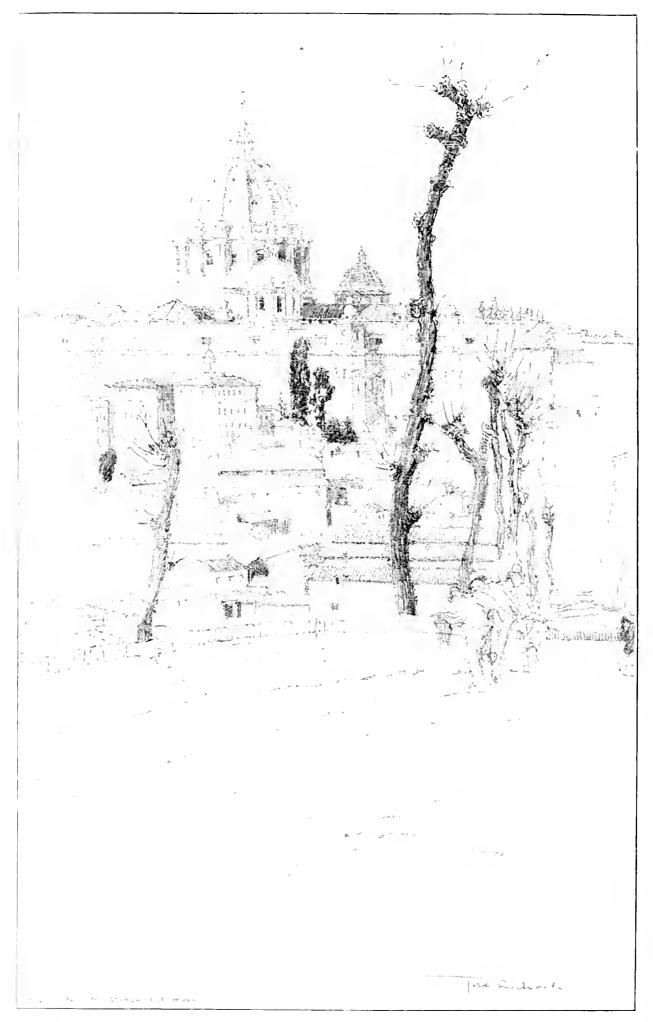

The railway in Aleska which the United States Government is building runs from the States Coverament is building runs from the deep-water point of Seward in Resurrection Bay to Fairbanks, a distance of 471 miles. The first seventy-one miles were built by the Alaskan Northern Railway Company, now defunct, and the Government bought that section for £3.200. the Government monght that Section 120,220 a mile. The line is now being reconstructed, and it is hoped to open the first thirty-four miles this year. The dock that belonged to the Alaskan Northern Company will have to be largely rebuilt.

It was reported to the Metropolitan Water Board at the meeting on Friday that the work of laying an independent main from the Forris Green reservoirs to the three engines at the new pumping station at Fortis Green, together with a sump pit and pipe chambers, and the new pumping station at Fortis Green, together with a sump pit and pipe chambers, and the laying of two 2f in delivery mains to connect to the mains laid under the G ear Northern Railway for future use on completion of the Fortis Green pumping station, has been completed at a total cost of £5.635 about £936 above the original estimates.

THE BUILDING NEWS, OCTOBER 20, 1915.

#### PROFESSIONAL AND TRADE SOCIETIES

BRISTOL SOCIETY OF ARCHITECTS The opening meeting of the session 1915 1916 took place on October 11, when the president, Mr. Graham C. Awdry, F.R.L.B.A., held a conversazione at the Restaurant, 6. Royal Promenade, Clifton. In the mahogany room a collection of drawings submitted by members of the society in various architec tural competitions was exhibited, and retrish ments were served. An interesting and in-structive address was delivered by the presi dent, after which a programme was rendered in which the following took part :- Mr. C. G. Skinner, piano solos; Mr. Charles Bernard piano solos; Mr. J. Foster Wood, F.R.I.B.A. Charles Bernard piano solos; Mr. J. Foster Wood, F.R.I.B.A., readings; Mr. T. S. Davis, recipitions; Mr. John Bevan, Lic.R.I.B.A., violin solos; Mr. H. J. Cavell, songs. A hearty vote of thanks to the president, proposed by Mr. W. S. Skimmer, F.R.I.B.A., and seconded by Mr. T. H. Weston, F.R.I.B.A. was carried with acclamation. A most enjoy able evening was spent, and the proceedings terminated shortly after 9 p.m.

EARLY EARTHWORKS AT CHARL TON.—An examination of the scant; remains of a once extensive earthwork at Charlton has been made by the British Archeological Association, by the countesy of Sir Spencer Maryon-Wilson, Bart., the free holder, and Mr. E. Gilbert, the lessee. paper on the subject was read to the members on Thursday by Mr. F. C. Elliston Erwood, the director of the excavations, who pointed out that the remains constituted the only fragment of early earthwork in the County of London, and they were being gradually destroyed in order to obtain sand for casting and glass manufacture. earthworks, which probably covered an area of  $17\frac{1}{2}$  acres, had now dwindled to about three acres, and had been reduced by at least one-half since Professor Flinders Petrie surveyed them in 1870. The remains indicated a quadrilateral enclosure sur rounded by a double bank and ditch, crowning an eminence overlooking the Thames. The excavations revealed the existence of a settlement of Romano-British culture, period of habitation ranging from the middle of the first to the middle of the second cen-The objects found indicated a community dwelling in wattle and daub huts, engaged in agriculture, weaving, and perhaps metal-work. No evidence of military occupation was seen. Among the various finds were two coins of Claudius, two fibulæ -one of second century type being enamelled in white and blue-loom weights, quern frag ments, a supposed fire-bar, similar to but larger than those discovered in the Essex hills, and a large quantity of pottery fragments of the first two centuries. objects were on view, and also two complete vessels found on the site in the course of quarrying in 1906.

GLASGOW INSTITUTE OF ARCHI-TECTS.—The quarterly meeting of the Glasgow Institute of Architects was held on Wednesday last, Mr John Watson, F.R.I.B.A., presided. The president ex-plained the proceedings which had taken place in regard to regulations for contracts for building works in Scot'and and stated that the proposed regulations issued by Sir G. R. Askwith would be considered at conference to be held in Edinburgh to day (Wednesday).

INTERESTING DISCOVERIES AT URI CONIUM.—At the annual meeting of the Shropshire Archæological Society at Shrews bury, last Wednesday, an interesting report was given by Mr. Bushe-Fox, director of the excavation at the Roman city of Uriconium, Vroxeter, near Shrewsbury. Mr. Bushe Fox Wroxeter, near Shrewsbury. Mr. Bushe For said they had uncovered about two acres There were the remains of many houses super imposed one upon another, the cather ones of wattle and daub being similar to the half timbered houses common in Shropshire in the present day. They dated back to between 75 and 120 A.D. One large dwelling-house and rooms heated with hot air, fine mosaic navements in different colours, and hot, tepid, and cold bathrooms. One of the most striking points about this building was the

dramage system. From a range watermain running down the street side channels passed through the different houses, having mouths taised 7 m. or 3 m. above the level of the main. There were sluce gates at intervals, so that when the stater was mised in the main their field. it flushed out the drains in the houses and carried everything away to the R vir S verii. The excavations already made proved almost conclusively that the town was abandoned about the year 325. They had not found any evidence that the end of the town was a massacre, nor that the town was buint, as was generally supposed. Some of the objects found dated as car y as 50 v.b. Among many interesting objects found were conducted of breoches, some beautifully made; a very fine clasp knife, carved hone; and two exumsite cameos.

MANCHESTER SOCIETY OF ARCHI FECTS—The Caendar of this incorporated society has just been published. It contains the annual report of the Council for the the annual report of the vouncer for convear 1914/15, which shows an aggregate membership of 271, v.z., 113 Fellows, 111 Associates, and 42 Students, a decrease of one on the previous year. The sylladius is given of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture in control of the School of Architecture nection with the Victoria University of Man-chester, which has as its director Professor chester, which has as its director Professor A. C. Dickie, M.A., F.S.A., A.R.I.B.A.; on the Advisory Committee the society is represented by Mr. Pani Ogden, F.R.I.B.A. and Mr. F. B. Dunkerley, F.R.I.B.A. The opening meeting of the session of the society was held at Canada Chambers, 36, Spring Gardens, Manchester, on Wednesday even mg. A collection of working drawings, lent by Messrs, J. Gibbons and Son, were ex-libited, discussion being invited. The usual presidential address will not be delivered this year, the syllabus for the session being as follows: November 10, Mr. J. B. Gass. Gus year, as follows: November 10, Mr. J. B. Guss, F.R.I.B.A.; paper, "Athens and Some of the Isles of Greece" December 8, Mr. C. E. Elcock, F.R.I.B.A.; paper, "The Necessian Converge 12, Mr. James E. Elcock, F.R.L.B.A.; paper, "The Necessity for Proportion." January 12, Mr. James Brown; paper, "The Builders' Point of View," February 9, Mr. I. Budden, M.A., A.R.L.B.A.; paper, "Originality in Architecture," March 3, Mr. J. A. M. Hunter, Lic.R.L.B.A. The scheme of prize competitions for the session is left over for future consideration.

R.E.B.A. EXAMINATIONS: DISCOY TINUANCE OF THE PRELIMINARY. The Council of the Royal Institute give not.a that the Preliminary Examination of cands dates for Registration as Probationers will be held probably for the last time next month. The Regulations which will come into force after its discontinuance will be published as soon as possible.

R.I.B.A. Phoblems IN DESIGN,-The galleries of the R.I.B.A. not being available for exhibition in consequence of their being devoted to the work of the civic survey of Greater London, the Council of the Architectural Association has kindly offered accommodation for the bi-monthly exhibitions of the problems in design. The exhibitions will be held on the following dates at 18, Tuftor Street, Westminster - November 5 to 15, 1915; January 10 to 15, 1916; March 6 to 11, 1916; May 8 to 15, 1916; Jaly 10

SANITARY INSPECTORS: MEETING IX NOTTINGHAM A meet of of the Derbyshire, Lerestershire and Nottinghamshire branch of the Sactary Inspectors As sociation has been he'd in the Guildhall, Not tingham. At the business meeting the war, both in relation to enlistment and sanitation, both in relation to enlistment and sanitation, came in for careful consideration. The chairman, Mr. J. Fondinson, Long Exton. reported that 25 per cent, of the members of the Widland centre had poined the colours. The necessity for a continued in crease to his Majesty's forces, especially in regard to similarly services, was fully appreciated, and although the members did not wish to appear in patriotic, the feeling was evident that it would be economically and morally wrong to deplete the stiffs of the local authorities to such an extent as to leave them unable to effectively carry out their Mediael Angelo, and Reminandt to "Instrate duties. For the purpose of obtaining a bis thesis that behind mere representation clearer understanding as to the position of there lay the idea inher at in the pairter, different contents of the pairter, different contents of the pairter of the pairter.

BRISTOL. - The reconstructed market was opened on Thursday by the Lord Mayor of Bristol (Alderman Swaish). The reconstruction has been rendered necessary by the purchase by the Great Western Rail way Company of two fifths of the site of the market for the purpose of extending their accommodation at Temple Meads Station. The work has been carried out from plans prepared in the City Valuer's office, and an icr the superintendence of Mr. Peter Addie and the mambers of his stalf. The area purchased by the railway company is being The area walled off, and the remainder has been laid ort arresh, with the result that there is morsovered assummodation than formerly now tavern and bruking premises have been built, and also a covered sale ring and overed pennage for cattle. At the sale ring crescent shape I gallery provides accommo lation for buyers or spectators, while in the troot part of the building suites of offices for anchoneers have been arranged. A new overed pennage for sheep is being built just mside the boundary wall of the railway com The floors of the market are of cen crete with roughened surface. The whole of the new buildings are of Cattybrook brick the new buillings are of Cattybrook brick with Broseaey tiles, and the contractors are Messrs, Walkerdine, Limited, of Bristol and Fierby. The covered cattle penning is the work of Messrs, Garliner, Sons, and Co., Limited, of Nelson Street, Bristol; and Messrs, Stock and Collings, of the Albert Iron Works, St. Philip's, supplied and erected the cattle pens, sale ring, ornamental entrance and stable fittings. gates, and stable fittings.

WAGES MOVEMENTS.

BIRMINGHAM -Negotiations that have been proceeding between the master builders of Birmingham and the Amalgamated Society of Carpencers and Joiners have resulted in the employers agreeing to pay one halfpenny perhour as a war bonas to the operatives in Birmingham and distinct the operatives in Birmingham and distinct the operatives. hour as a war bonus to the operatives in Birmingham and district who are not receiving such a bonus or its equivalent. This will mean a weekly advance in wages of from 2s. to 2s. 6d., and by the concession, which comes into operation on October 24, from 7,000 to 8,000 men (bricklay es. carpent es., plasterers, masons, labourers, and navvies) will be allected. The arrangement will remain in force until three months after the war. Councillor Saunders, the secretary of the society, suggests that the workers should still press for the payment of a bonus of a penny per hour, and for the deletion of the claus? "To terminate three months after the war." As we announce I in our last issue, the employers have granted a similar bonus of 2d, per hour to the builders' labourers in the city. in the city.

in the city.

CONTINUED DECREASE OF UNEMPLOYMENT.—In the trades compulsorily insured against unemployment—viz., building, works of construction, engineering, shipbuilding, vehicle-making, etc.—the percentage of unemployment at October 1 was 0.91, as compared with 5.11 a year ago and 3.45 two years ago. These figures relate to the whole of the United Kingdom, and include all unemployed workmen in the insured trades.

WICES IN WAR TIME—The Roard of

WAGES IN WAR TIME.—The Board of Trade Labour Gazette publishes an article on the advance in wages during the war. This states that the advance which began in 1910 and reached its culminating point in the first half of 1913 was followed by a decline in wages in the metal and mining industries and by a slackening in the advances in other industries. In the first seven months of 1914 the net effect of all the changes recorded was a decrease in of all the changes recorded was a decrease in wages of nearly £13,000 a week. After the outbreak of the war, however, owing to enlistments and an active demand for war require ments, employment became very good, and before the end of the year a considerable amount of overtime was being worked, and in amount of overtime was being worked, and in several trades complaint was being made of a shortage of labour. Concurrently the prices of food and many other necessaries rose. In these circumstraces a movement began at the beginning of 1915 to raise wages. This movement, which in most cases took the form of houses, or of increases in rates of wages limited to the dration of the war, first became evident in the trades most directly concerned with the output of munitions and the transport of troops and supplies. From March onwards, however, it spread to nearly all the principal industries, and its effects have been far greater than those of any other upward movement is wages previously recorded. It is estimated that during the whole period under review about four and a half million workpeople have about four and a-half million workpeople have had their rates of wages increased by over £750,000 per week. In the organised trades in which the numbers affected are ascertained by the department from the parties concerned in arranging the changes there have been is crosses reported amounting to £494,000 per week in the rates of wages of over 2 800,000 workpeople, an average of about 3s. 6d. per head.

#### TRADE NOTES.

Boyle's latest patent "Air-pump" ventila-tors have been applied to Allerton Weselyan Chapel, Bradford, Yorks.

The Wholesale Co-operative Society's architect (Newcastle) reports that the water tower connected with the new West Hartlepool Co-operative buildings has been made waterlight by using Pudlocal coment.

In consequence of the war and of the need for economy in every direction, the construc-tion of the new offices of the India Govern-ment in Karachi has been indefinitely post-

A new Chirch of the Covenant is to be built at the corner of Brondway and East 27th Street, Paterson, New York, at an estimated ontlay of \$125,000. The architects are Messas Lee and Hewitt, of 1,123, Broadway, New York.

### Our Office Table.

The Committee for La Maison de Dieu, 45. Salisbury Square, E.C., of which Mr. Douglas Pepler is one of the hon, secretaries, has started a fund to present wooden churches to Cardinal Mercier to take the place of the churches which have been destroyed in Belgium, and which cannot be rebuilt for a long time to come. It is proposed that these struc tures should be made by the Belgian refugees, and started either in Holland or France. They would be made in sections, bolted together and used by the refugees in their temporary homes until the time came for them to return to their own country, when they could be re-erected on a concrete platform, and would last as long as they were wanted. Donations may be sent to Monseigneur de Donations may be sent to Monseigneur de Wachter, Bishop's House, St. George's Road, Southwark, S.E.

Facilities for the study of designing in steelwork and remorced concrete are provided on Thursday evenings at the L.C.C. School of Building. The advances made in structural engineering and the L.C.C. new regulations for reinforced concrete have created a growing demand for young engineers and architects with practical training in the theory and design of structures. The class is conducted by Mr. R. Graham Keevill, A.M.I.M.E., M.C.I., and affords opportunities to those desirous of instruction on practical lines.

According to the annual report of William Williams, Commissioner of the Department of Vater Supply, Gas, and Electricity of the City of New York, for 1914, the Street Lighting Bill for 1915 will be \$400,000 less than for 914. A goodly portion of the saving is said o have been effected by the use of pitrogenilled tungsten lamps in place of the arc lamps. The former are being rapidly introduced ver the city In 1set, before the end of the ear it is expected that 15,000 gas lamps will e replaced by the electric incandescent lamps. in interesting comparison between the relaive cost of operating nitrogen-filled tungsten imps and are lamps is presented in the folowing figures: 300-watt nitrogen-filled tungten lamps cost \$70.00 each a year to operate. hile the 400-watt lamps cost \$77 00. ost of operating are lamps was \$85.00 each; reduction of \$5.00 having been effected in ne course of the current year.

The City Council of Coventry met speci-ly on Thursday to deal with the scheme, orked out by the Housing Committee, the linistry of Munitions, and the Local finistry of overnment Board, for the erection of 600 overnment Board, for the crection of 600 puses for munition workers on land near toke Heath, just outside the borough mits. The site of fifty acres will be rehased at £200 an acre. The cost is timated at from £150.000 to £200.000. It the Ministry of Munitions will pay e corporation about 20 per cent. on what ch a scheme would have cost at pre-war ices. Mr. Poole, chairman of the Council ousing Committee, said it might have ousing Committee, said it might have en thought that the fact of so many n having gone for h as soldiers would ve reduced the need for more houses, but tat had not proved the case, and the unble was greater now than at any other riod. The houses to be erected were to l, in the first instance, for munition orkers, and held by the corporation in the usual way; but the committee recognized that there must be quicker methods to the corporation must have financial aistance from the Government. He would that the scheme was to by any means the last word in borning has been provided at once. The committee rected an alternative of temporary account addition, on the ground of ultimate waste all their confidence that Coventry was gang to be, in the future, a much more inortant armament centre that it had been hereto. Mr. Grant said he thought the Gernment allowance should be on the bis of 33½ per cent. on pre-war prices, as alDudley. Alderman Batchelor contended the provision should be made also for the 2,00 or 3,000 women about to come to cerection than ordinarily prevailed, and to the corporation must have financial asistance from the Government. He

Coventry for amministing way council adopted the committee recommen dation. It is expected that the centration will be at work in the corner of a fort might.

The Town Country of Dudley extring in committee have formulated a report of an important scheme for providing arosans dwellings at a total estimated expenditure of \$2100,000. The report states from the amount had considered a alrestic. that the council had considered correspondence from the Local Government Board inviting the council to build at once 366 houses in the borough, subject to a grant in-aid from an important Government Department representing a material part of the additional cost of building at the presentime. They sent a deputation to concet with officials of the Board on the subject. with the result that a final offer of a free grant of 25 per cent, of the cost of the buildings and 10 per cent of the rost of the made to the rouncil. The committee and accepted this ofter, subject to the coance approval. The committee recommended that a housing cheme be prepared forthwith, with the assistance of the officials of the with the assistance of the officials of the Local Government Board; that application be made to the Local Government Board for east for the Loriow the proportion of the cost of the scheme, ucluding the land, to be borne by the council, and that application be made to the Public Works Loan Commissioners for a loan of the propor tion of the cost of the scheme, including the land, to be home by the council. It is proposed that the whole council in committee act as a Housing Committee for the purposes of the proposed scheme.

The Borough Engineer of Kensington has. says a writer in the Engineer, prepared a Much scheme to repair roads economically road improvement is necessary, but munic. palities will not be able now to secure loans for costly repaying schemes. The borough en to secure loans gineer some time ago experimented with a concrete carpet over the macadamised roads. and was delighted to find that it served its purpose admirably. The carpet not only purpose admirably. The carpet not only spread the weight of the Leavy modern motor vehicle fairly evenly over the foundation of the road, but also did much to absorb shock. Now this process is to be adapted to certain wooden roads which are in leid condition. He proposes to deal with an experimental length of roadway by removing the wood and converting the foundations into a concrete road. The existing foundation will remain. but will be reinforced by a layer of bitu minous concrete, over which a wearing sur-face carnet of concrete will be placed. It is face carpet of concrete will be placed computed that such a reinforced total will last as long as a completely may road, but the cost will be only one-third of a new

A conference of the urban district councils of Walton, Esher and the Dittons, and East Molesey has decided adversely to the suggestion of the Surrey County Council for the formation of a board of control over the river Mole.  $\Delta n$ on a poard or control over the river Mole. An alternative scheme for improving the course of the river and minimising flooding has been drawn up by the surveyors to the three councils, the estimated cost being about £3,000.

The Glasgow Corporation considered Thursday the position relating to the increased house rents in the city. Proposals were mach to petition Parliament and to hold a local m quiry, but by an absolute majority the Cor-position agreed to forward to the Commisporation agreed to forward to the Commis-sioner appointed by Mr. Lloyd George the whole representations and resolutions received by the corporation for his information.

Mr. Edward Leonard has held an inquiry on hehalf of the Local Government Board into the application of the Carlisle City Council to learnew £9.582 for the purchase of land and the creation of workmen's dwellings. The town clerk, Mr. Collingwood, stated that there were no empty centages in the distinct, and that were no empty cettages in the district, and that a log influx of workers was anticipated in the mear future. Dr. Beard, medical officer of heddth, and Mr. Marks, city surveyor, also gave evidence as to overcrowding, the latter stating that the projected houses would probably be erected by direct labour.

The members of the Church Committee of Holbrook, East Suffolk, are contemplating making certain necessary improvements and making certain necessary improvements and alterations in the fabric of—the church, and arve requested Mr. E. Fearnley Beshopp, architect, of Ipswich, to report upon the matter. He acknowledges that Holbrook Climich at one time must have been really beautiful, but through long years of neglect it has gone down, and some of the modern work is very poor. A large sum must be spent upon the roof, which is in a bad condition. Mr. Bishopp's report was considered, and eventually it was agreed to take up the matter again at the mext monthly vestry meeting.

next monthly vestry meeting.

Colonel Porter, chairman of the Liverpool water committee, briefly reviewed at the last meeting the work of the past twelve months. During the year the total quantity supplied from all sources was 14, 164,575,000 gallons, an increase on the previous year of 343,961,000 gallons. The average rate of consumption per day was 39,733,000 gallons. In accordance with suggestions received from the President of the Board of Agriculture arrangements had been made to reduce as far as nossible the area of land to be planted on the Vyrnwy area during the season 1915-16. The reduced area to be dealt with would be sufficient only for the idunting out of young trees which could not be kept longer in the nurseries.

CORRESPONDENCE.

Special attention of members is drawn to the fact that correspondence should be answered by return. If this is not attended to the office work of the corps is immensely increased. Enrolment forms of new members and all correspondence not referring to recruiting for the Army or to financial matters must be addressed to the Adjutant, 10, Conduit Street, W.; and regarding recruiting for the Army, to the Recruiting Officer at Rattalion Headquarters; and regarding accounts and subscriptions, to the Paymaster, W. R. Hughes, 146, Dashwood Honse, E.C. By Order.

By Order, L. R. GUTHRIE, Adjutant, BATTALION HEADQUARTERS, IS, TUFTON STREET, WESTMINSTER, S.W.

#### >000 MEETINGS FOR THE ENSUING WEEK.

WEDNESDAY (To-day).—St. Panl's Ecclesiological Society. "Monasticism in the Greek and Russian Churches," by the Rey.

Society, "Monasticism in the Greek
and Russian Churches," by the Rev.
N. F. Robinson, S.S.J.E., St. Paul's
Chapter House, E.C. 8 p.m.
Frinty —Junior Institute of Engineers, "Safety
Precantions for Transmission
Machinery," by W. V. H. Capps, 39,
Victoria Street, S.W. 8 p.m. Victoria Street, S.W. 8 p.m. Glasgow Architectural Craftsmen's Society, "The Bocks of Scotland" (illustrated), by David Chalmers, 8 p.m.

S p.m.
Syn edyy.—Institution of Municipal and County Engineers. North-Eastern District Meeting at Brighouse. "The Juties of a Municipal Engineer in the Present War," by S. Haywood. 2.30 p.m.

The Local Government Board have sanctioned a loan of £3.327 for a refuse destructor to the corporation of Newport, Mon.

Mr. H. Stringer Jardine, A.R.I.B.A., Turney Road, Dulwich, late of the 1st Battalion London Scottish, has been gazetted 2nd Lieut., 3rd 1st London Field Company, R.E.

Lieutenant E. Stanley Thornton, of the 6th Worcester Regiment, is reported to have been wounded in Gallipoli, and moved to hospital at Alexandria. He is well-known as a surveyor in Birmingham.

Members of the Architectural Association's School of Architecture will be gratified to learn that the late Master, Mr. H. P. G. Maule, F.R.I.B.A., formerly Company Sergeant-Major of the Hon, Artillery Company, has been given a commission and the post of Camp Commandant.

### LATEST PRICES.

N.B.—All prices must be regarded as merely approximate for the present, as our usual sources of information are in many cases failing us.

### TIMBER.

Owing to steppage of supplies all prices have advanced considerably.

M: Wilham Morris, M Inst C.E., V.D., late buffered on Thursday last at Buxton in his 80th

We regret to hear that Major Basil Edgar Baily F.R.I.B.A., of the 7th Battahon Sher-Bally F R I B.A., of the 4th Battanon Sucrawood Foresars, and in practice at 44, Parliment Street, Nottingham, has lest his right hand as the result of being wounded in action it F after. He is now progressing favourably in a London hospital.

The old oak lectern which was displaced in The old oak never which was uspaceed in 1845, when an eagle betern was given by "certain College Prefects," has been restored to the chapel of Winchester College. It dates from 1950, and was made by one Howsman, who is decrebed in the College accounts for 1632-85 and Maysman falca lignaria." Howsman fabro lignario.

Mr. J. W. Gilmour Wilson, chief assistant to his father, Mr. W. Gilmour Wilson, of Blooms-bury Man. C., Hart Street, W.C., F.R.L.B.A., who has been for six years a member of the London Scottish, has just received a commission as 2nd Lieutenant in the Mechanical Transport Division of the Army Service Corps.

by twenty-four votes to eight the corporation of Wolverhampton have approved of the payment of an honorarium of 350 guineas to Mr. E. A. V. Woodward, the borough water en gameer, in recognition of his services in assist-ing in the passing of the Wolverhampton Cor-poration Water Act, in spite of stremous ep nosition.

It was reported to list week's meeting of the Manchester Rivers Committee that Mr. Gil-ler Hart, a member of the committee's main draininge staff and now a temporary second henterant in the 173rd (Tunnelling) Company of the Reyal Engineers, had been awarded the Military Cross for conspicuous gallantry and skill in France.

In the new hall of Spurgeon's Orpharages Aspliam Road, Stockwell, a three-light Chaplain Road, Stockwell, a three-light will dow in the transpot, erected as a memor al to the Rev. Vernon J. Charlesworth, for many to its the he burster, will be unveiled rosmoriew (Timrsday) afterneon by the Rev. Themas Spirgeon. The subject is the Go of Shepherd, and the artists are Messrs. Morris and Sons, of Kennington.

The opening meeting of the session 1915-16 of the R aval Institute of British Architects will be field on Monday week, November 1, when the subscript on portrait of Mr. Reginald Blombidt, RA past irrisident, painted by Mr. J. J. Stannon, R.A., will be formally in a vided and present d to the Institute, and the opening address if the section will be delivered at Mr. Ernest Newton, A.R.A., the President.

The death at Stockton Bridge of Mr. Thomas Allen at the age of eighty four removes a well-nown ceramic artist from North Staffordshire He received his artistic education at the National Art Training School at Marlborough House, and after yards at the South Kensington Schools on the contdetion of his training he joined Mests Muitors, and subsequently became art his contact views. Josiah Wedgwood and Sons'. Etrona - He had hyed in retirement at Stock-ton Brook for some years

At the last meeting of the urban district une Lei Macket Harborough if was reported with the soveyor. Mr. Herbert G. Coales, had that the surveyor, Mr. Herbert G. Coales, party prepared a plan in connection with a tewns claiming scheme. The clerk, Mr. H. Lindley, said the general idea of the scheme was that, if the lard was scheduled for townsplanning, one coincil much could say where roads could go and which part of the town could be used for building factories and which could be used for residential converses, and they could limit the name der tial purposes and they could limit the number of houses to the acre. The matter was adfoured to give the members an opportunity of looking into the plan.

## TENDERS.

"." Correspondents would in all cases oblige by giving the addresses of the parties tendering—at any rate, of the accepted tender: it adds to the value of the information.

(Accepted.)

BAITERSLA'S For machine-made canvas fire-brigade how for the Metropolitan Water Board:— Angus, Geo., and Co., Ltd. . . £100 0 0 (Accepted.)

Batteesea. For supplying pulleys and wall brackets at the Central Buildings, Battersea, for the Mecropolitan Water Board — smith and Grace (accepted) . . . £178 10 0

Battersea.-For the supply of gunmetal stop-cock, and ferrules, for the Metropolitan Water Board --

Woodhouse and Co., Ltd. .. £412 10 0 (Accepted.)

BATTERSFA.—For the supply of 110 yds, of taped and brand decals, but megodim grads, for the Metro-politan Water Board:— Callender's Cable and Con-struction Co., Ltd. (accepted) 4116 0 3

Bradiord. For supplies, for the trainways department. Accepted tenders:—

nent. Accepted tenders:—
Oxygen (three months):—
British Oxygen Co., Ltd., £1 5s. per 1,000 feet.
Gearwheels and pimon for motor-cars:—
Scholey and Co., Ltd., 200 teol-steel gears a
£7 9s. each, and 200 tool-steel pinions at £1 5s

Philodontii - For repairs and improvements to the starway approach to the council chamber, for the corporation:— Lay, T. E. (accepted) . . . . £115 0 0

(accepted) about ... £1,500 0 0 CHESHUNT. -For the supply of 2-m. broken Guernsey grantle, for the urban district council: — Griffiths, W., and Co. (accepted), at from 148, 3d. to 14s. Ild. per ton, according to place of delivery.

Derry — For the provi ion of cloakroom fittings at the new secondary school for girls, for the educa-on committee:— Ratcliffe, J., and Co., Derby . . . £172 0 0 (Provisionally accepted.) tion

Diss.—For repairing Walcot Road, for the urban district council:— Edwards and Co., Norwich . . . £565 0 0 (Accepted.)

Ensirourne.—For alterations to Durley, The Agence, for the Rey, Sir Peile Thompson, Bart. Ir. S. C. Scalis, architect:—
Bambridge, G., and Son, Eastbourne (accepted).

HAMMERSMITH.—For repairs to boiler at Hammer-muth station, for the Metropolitan Water Board:— Beeley, Thos., and Son . . £85 0 0 (Accepted.)

KINNIGH. For erection of proposed medical residence at Kinneigh, for the Cabireiveen Board of Guardians:

ordians:-Jennings, W., Kilgarvan (Provisionally accepted.) £1.300 0 0

LAMBETH, S.W. - For redrainage, repairs, and decorations to manager's house. Providence Wharf, for the borough council: Collars, S. J., and Sons, 7, Clifton

Collins, S. J., and Sons, c. Chilon Street, Clapham
Pierpoint, R. H., 106, Albert Road, Peckham.
Daley, W., and Co., 58, Birch Grove, Acton
Peddle, E., 156, Hamilton Road, West Norwood (205 5 0 225 2 6 215 0 0 West Norwood Fineh and Co. 48, Budley Road, Ifficed Line, H., 81, Peckham Ryc, 8 E. Line, A. H., 36, Camonale Street, E.C. 179 0 0 167 15 0 E.C. Truscott, R. J., 291, Romford Road, Forest Gate Shaw, S., 18, Grange Park Road, Leyton Jackson, H., 22a, Afred Street, 167 0 0 164 1 2 159 5 0

# A BOMB-PROOF BUILDING.

Since we last dealt with this matter a fortnight ago, the results of the last Zeppelin raid in the "five areas" have sufficiently demonstrated the urgency of the necessity for modifying our future construction. We know, at any rate, what aerial bombs will do!

An aerial bomb, falling at K, Fig. 1, is endowed with destructive force of impact related to its mass and velocity. On ex

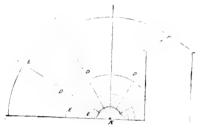

FIG. 1.

plosion it wrecks material and structure in contact. Presumably this force may vary inversely as the cube of the distance from the centre of explosion, as diagrammatically indicated at E, etc. The explosion scatters shell-contents and debris, as shown at D, etc., in rectilinear, radiant lines, obviously under ordinary projectile law. In addition, there is either chance fire, or such by design, as from specific incendiary bombs. Further, from solid objects, such as walls, there must be secondary, reflex air-concussive wave systems, no doubt capable, at times, of blowing in the glass of windows.

Assume an explosive bomb of, say, 50 lb, weight, falling from a height of some 4,000 ft. Under the constant acceleration of gravity, such a hostile missile will arrive at the earth's surface at a velocity of about 500 ft. per second. The limits energy, the investe or invariables kinetic energy—the impact or impulsive force, available for destruction—acquired force, available for destruction—acquired through the fall, taking g 's the force of gravity = 32, and using the old formula  $K = \frac{1}{2} m v^2$ , will be  $\frac{50}{2} \times \frac{500}{32}$ , or

about 195.000 foot-lb., for our purpose-in round numbers, 87 foot-tons. To oppose the mere impact of such a falling mass, we need more than a few slight sheets of wire

We have heard that some of these postile bombs weigh 2½ cwt. It is conceivable that such may be dropped from, ay, a height of 10,000 ft., so the reader an estimate the force of impact. In Fig. 2 we give a diagram, from memory. of something we have seen in one of the five areas." so officially described. A omb impacted on the concrete roof  $C_r$ .

New Central Offices, Rochety Avenue, E.C., for the Metropolitan Water Bourd, Mr. H. Austen Ha, F.R. F.R. V., Architect.

broke through this and the concrete floor C2, and appears to have impinged directly over a steel joist, J. This joist, we understand, was about 10 m. by 6 in., of \$\frac{1}{6}\$-in, metal. About 1 ft, 6 in. to 2 ft. of that P.S.I. \( \). that R.S.J. has vanished, as indicated at Ks appears to have been wiped out of existence. The joist formed a lintel to an area window, and the explosion has disrupted the brickwork of the area walls a great deal more violently than approximately indicated in our sketch, besides greatly damaging adjoining buildings; and although our sketch may not exactly represent the premises where this bomb fell, the quite undisturbed brickwork here, and its complete disruption there, is in true accord with the peculiar, partial character of high explosive. In all the areas officially described, examples of the destructive forces to be met are numerous. In one a foct of concrete was perforated, and four or five feet of earth thrown out, roofs were blown off, holes made in solid granite in which one may put two fists,  $1_2^i$  to 2-in, iron railings cut clean through, cubic feet of solid masonry | dislodged, to say nothing of other evidences of immense explosive energy that it is the duty of the architect to consider.

When new problems of this sort are suddealy presented, only the empiric will instantly profess to suggest certain solu-tions; but we will endeavour to put forward some farther suggestions. Before

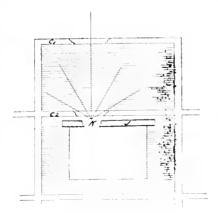

FIG. 2.

our examination of the latest results of great impact and high explosive forces, we might have hesitated to submit our sketch, Fig. 3, for discussion. We present the design now, however, for what it is worth. While ordinary stanchions, supporting netting, slag-wool, or sandbags may be the best possible expedients in regard to existing methods of construction, our sketch essays something entirely re-

modelled, assured and complete. Our sug gestions are mainly aspared by consideration of certain natural phenomera. The earth is protected from national "unbard-

ment la its atmosphere. The high velocits of these celestial projectiles causes their destruction. Our proposal here is to so k to ensure a definite explosion of a bomb as high above the building as possible. In doing this we must guard against diverting destructive forces to neighbouring premises. But for this consideration, we might rely more on steep-pitched armour plate roofs. These would possibly shelve a lomb, but the missile would be discharged over adjoining roofs or into the street. The bomb must be caught directly, and the explosive forces rendered as harmless as possible. Reviewing these circumstances, we turn to Figs. 4 and 5. We have suggested already that the explosive energy must lessen, from its source of origin in a cer-tain geometrical order. Therefore, a re-bitively slight removal from immediate control with the explosion greatly reduces the destructive energy; the further that we can remove the point of literation the less will be the destruction to the building Fig. 4 shows a special detonating plat-form, P. The explosion should occur as form, I — The explesion should occur as far above a second it y platform, B as may be practically possible, which should be of such a nature that it will resist the results of the explosion as the forces of such are diminished by the distance between the two stages. This we think a correct principle, when we consider the holes in thickly-concreted roads, which

appear to be the result of explosive force against solid resistance. It would seem that it is the institute contact that renders high explosives so destructive. Fig. 2 we should incline to consider the actual det nation and explosion to have taken place immediately above K, and regard the holes in the concrete, C, and Us, as resulting from impacting force. A bemb proof platform, then, must resist both the force of impact and the explosign if it is at a low level; but, if raised sufficiently high, its office might be to cause detonation and explosion, the secondary results of explosion being recerved by a lower staging. Assume that the platform, P. Fig. 4, is raised 500 ft. alove B, then, once the explosion has been caused, we do not mind what wreckage occurs at this level, so long as the explosion wave (500 ft. below) is so reduced that we have only to deal with this lessened force plus the projectile emanations from the explosion. We must, how ever, have regard to neighbouring premises In Fig. 4, say the explosion occurs at impact K. Debris and shell contents are showered down at D. etc.. upon the bomb proof platform, B; but at D miss this screen and are directed on to adjoining toofs. If now, in Fig. 5, side walls are erected round the detonating platform, debris from the explosion at K cannot be projected over adjoining premises at a lower angle than D. D<sub>3</sub>. That something immensely strong needed for this screen wall is evident to all who have seen the results of a boml falling in a passage-way and bodily shift ing a heavy stone plinth below massive iron railings. Figs. 4 and 5 we sketched some little time back; it was after witnessing various recent wreckage that we made sketch. Fig. 3. It may be thought extreme, we thought so ourselves until we considered the forces involved in Fig. 2 If indeed extreme, it may perhaps be reduced by calculation and design, so that the right mean may be discovered between obviously ineffectual efforts and that which attempts, possibly, superfluors strength and excess if precaution

The z wind idea of Figs 4 and 5 was a let not az platform a bombproof plat

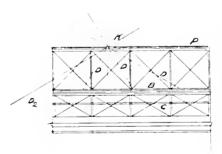

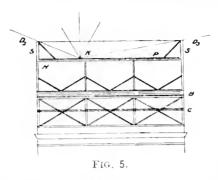

FIG. 4.

. - rissentehing net The search, Fig. 3, proceeds on much the same lines, and assumes aerial warfar to have become a resignised factor in fluen ing building construction, and carries such a weight of protective defence that separate stell plate riveted columns carry this lead direct to foundations. We neg lect, for the moment, destructive effect from homes fulling outside the building. Assuming the fuilding 100 r. square, five fest of sand would be a lond, alone, of over 2 000 tons. As seetched, the steel columns necessarily trespass on the build ing spine, being butter I for stability. If way above a building. The general idea creeted plumb they could be enclosed in seems rather to suggest a fullular girder, turned the projections, and the construct terming in min1 that, in addition to sup-

con could be such that the steel-riveted ocumns could be isolated, or insulated, rom the actual building. The sketch, Fig. 5, was made before we had studied the deet of the bomb as shown in Fig. 2. therein, the missile has penetrated a conrete roof and floor, and wrought some avoc upon a steel joist, the nature of thich is not quite clear. If it sheered the tiel, as appears possible, it exerted a force purvalent to a dead load of, say, 270 tons. n the face of this, and the clean holes in ouf and floor, we must not trust to con-

crete or steel to resist either impact or explosion; and we are driven back to the quasi-elastic means of receiving a falling weight, and to sand-packing; and hence for the top platform in our sketch. Fig. 3 we would suggest steel netting, a layer of slag-wool over, and a very considerable lepth of sand, the whole so designed that the bomb would have no chance of dropping on to any solul material whatever. The side screen walls would restrain any -cattering of débris over adjoining pre-

mises below a certain angle.

The sketch, being a development of the plea in Figs. 4 and 5, shows a lower platform to catch any debris from, and pene trating, the upper platform, and an additional steel netting below this. It seems plain that the amount of protection afforded would relate to the amount of brakmy resistance that would be brought upon the falling projectile; this is lest accomthe failing projective, that plished with saud, which picks under the influence of a projectile. We would place influence of a projectile. We would place the said upon one foot of slag-wood, supported by strong lattice-steel netting, and would give the whole as much elasticity as possible. We inclined the steel columns for stability, but it seems possible that the outsetting of these supports to or near the exterior wall lines would leave a clear run for netting. Necessarily these are points open to much debate. That which a theoretical consideration would seem to demand is a strong hoop, free of supports over the building area, and so lesigned that the lateral stress from sudden depression of the elastic structure would be suitably resisted by the hoop. The instant when the tennis-ball strikes the racquet must witness the conversion of the energy of impact into stresses tending to crush in the hoop; so that our main principle would seem to be a maximum of lasticity for the platform, and to prepare he hop to adequately withstand the concerted stress equivalent to a side thrust upon the girders supporting the margins of the notting. It would seem, then, that toss gir lers should be a'sent. In practice t would, no doubt, be difficult to realise this ideal, and where this is so, we must car big. 2 in mind, and protect as much as tossible all stadwork. Short of greatly inclined armour-plate, it would seem hepe less to stop a bomb by means of solid material of any such molerate weight and thickness that it could be placed in sorre

porting a load, we have to be prepared for cross strain; and as we cannot expect a bomb to fall in the centre of our elastic structure, we may see certain advantages in a design of platform that yields equally all over. The more science is brought to bear on this problem the less cumbrous and weighty, probably, need be the whole scheme of defence.

Fig. 3 shows the great mass of defensive material on the uppermost staging. In Fig. 6 this is provided at B, while P, so long as it causes detonation and explosion, may be as light as consistent with the provision of sufficient obstruction to cause such explosion. K is the point of impact and explosion. Circles 1, 2, 3, 4, and 5 suggest the decreasing effect of the explosion wave, which, if impact is at R, the distance K-E is the measure of the reduced forces acting at the level of the platform B. This, then, need but resist débris and shell contents. The impact, say, has partially destroyed P, but the explosion has obliterated the impulsive, destructive force. We have got rid both of this and the necessity for providing resistance to high explosive in immediate contact. The debris-resisting platform B shelters the building, as shown, within the lines D,

It must be remembered that the impact of 2½ cwt. falling say 10,000 feet is over 1,200 feet-tons. If we are to deal with this and with an immediately contacting high explosive, we require an upper staging after the lines of Fig. 3, with as great a depth of sand as possible, all needing immense strength in the supporting structure, while if we make the staging P, Fig. 6, act on the bomb as the concrete roof and floor in Fig. 2 presumably acted, we need something comparatively light. Before considering detail design we need to arrive at

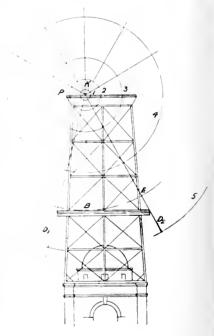

FIG. 6.

general principle of arrangement, based upon sound theory.

We may learn much from Fig. 2. Obviously the bomb broke through the concrete by impact. In the space of, say, 1-80th second, it exploded, probably close to the steel joist. The evidences are the to the steel joist. level, angle, and direction in which shell contents and débris have been scattered on to adjoining premises, and they bear eloquent testimony to the fact that while endeavouring to protect our own buildings we must have due regard to those of our neighbours.

# THE ENGINEER A PRACTICAL IDEALIST.

Let us turn in detail to various branches of our profession, and see if the practice of them is likely to be destructive of idealism The Mosaic code of laws shows that the health of the Jewish population was a matter of such supreme interest that special legislation on that subject seemed warranted. The Greeks, and particularly the Romans, recog nised fully the moral value of personal cleanliness, but it has been left to our country to show clearly, and on the basis of scientific study, the interdependence between samitation and disease, sewerage and crime. Mun-sterberg has said, "Hygiene can prevent more crime than any law". Speaking before rime than any law. Speaking before the Massachusetts Conference of Health Officials, Dr. Charles W. Eliot, President Emeritus of Harvard, addressed them, in part as follows: "The progress of knowledge of preventive medicine made during the past hifty years, and in applications of that knowledge in social practice, has been the most cheerful phenomenon in the recent history of civilisation. The new applications of physical forces—heat, light, and electricity, which forces—heat, light, and electricity, which mankind has learned to use in its conflict with nature—have proved to be highly beneficent in the field of preventive medicine. Civilised communities have been chabled to make their water supplies, food supplies, and systems safe, and to contend with unex-ampled success against formidable pestilences. the common communicable diseases, and the bodily ills which attend urban life and the factory system,

# SANITARY ENGINEERING ACHIEVEMENT.

In this work of preventive medicine the sanitary engineer has borne his full share, As we read these inspiring words of Dr. Eliot our thoughts turn at once to that means mental work in sanitation carried out on the Panama Canal under the direction of General Gorgas, and with the hearty co-operation of the engineering staff. Under disheatering difficulties, and with sacrifice of personal comfort—yes, at the risk of their lives—the men laboured who made the Isthmus a place fit for the white man to live, and thereby made the construction of the canal, which neans so much to mankind, possible. Honour, leserved honour, has come to him who lirected this splendid piece of sanitary engiseering; but I desire to put on record here he appreciation of this society for the men who stood by. Is it reasonable to suppose that he engineers who did this work, who made hese sacrifices, were not the highest type of nen-practical idealists? We are called iconoclast engineers, utili-

arians, non-respecters of tradition, antiquity, nd picturesqueness. Iconoclasts Yes: reormers usually are. Utilitarians? That, too. s an accusation we cannot deny, but is an ct less noble for being useful. Nonspecters of tradition and antiquity? Again plead guilty, if tradition stands for error. and antiquity for decay. Destroyers of the icturesque? A general denial cannot be stered against this charge either, and in me cases, I am free to confess too little istification can be shown for the disregard the picturesque. This is a point I shall uch upon more fully later, but with special plication to the cases cited above and milar ones, what is picturesqueness but the seased condition of structures and their roundings? What is this vaunted love of picturesque, in many cases, but a selfish d thoughtless appreciation of surface pearances? Selfish and thoughtless, I say, cause the few are willing to sacrifice the alth and happiness of a whole community. rhaps, in order that they may feast their oes on narrow winding streets, on quaintables, far-reaching eaves, small, uriously laded panes of glass. They are taken in I the surface appearance of things. But lile heed give they to the squalor and dirt, tomisery and sick ess existing in these pictesque quarters. Who, then, is the idealist he man probing into the sore which has so ble surface indication, finding its deep reted seat, and skilfully using the knife.

Extracts from the presidential address of Charles IMarx, delivered at the Forty-seventh Annual Convition of the American Society of Civil Engineers in S Francisco on September 16.

or the man who missed he these attre and ts. applies a surface dressing and arlows the set to eat into the body. To the thinking man the answer is simple. Perhaps you was grant now that it least one branch of engigrain how that it gast one firther of engi-neering, saintry engineering, and idealism are not only not meompat,ble, but that they are almost inseparable. And what I have shown somewhat fully to the branch of the profession can be shown as well for the many ther branches.

# TRRIGATION OPENS NEW TERRITORY

Take irrigation engineering, for instance the possibilities of which are only beginning to be realised in this country. Is it likely that the men carrying out these works see in them but the piling of one stone upon another, the digging of so many feet of pipe? These black cast or wrought from cylinders stand for more than this to the true engineer. He realises that with every water or drain pipe well laid he s bringing time engineer. The council of water or drain pipe well laid he is bringing prosperity and happiness, health and vigour, where before existed poverty and misery, sekiness, and langiour. Perhaps the most wonderful instance on record in modern times of the far reaching effects of irrigation engineering is found in Egypt. In an acticlion the regeneration of Egypt by the former librarian at Stanford, Mr. Woodruff now professor of law at Conseil, he midiesthatingly and justly, I think, attributes a large share of the credit for time "new bath" to the work at the English engineers. Mr. Woodruft says, "The history of the English in the administration of Egypt for the past nine years s the record of the return to health, strength, and prosperity of a country that has been bled and starved almost beyond resuscitation. And yet there has been little romance in this restoration. It is closely a story of common sense, hon sty, and strught

forward hard work.

But we need not turn to foreign countries to find work of the aragation engineer worthy of commendation. Our own Replanation 8 i vice has made a record of which we may wel feel proud. Here, too, the men, with loyalty and stendfastness, have given a service the value of which is not yet fully recognised. a record of which we may well They are the men of whom Chief Engineer Davis said: "Their chief tie to the service is not the matter of salary, but interest in their work and loyalty to a and the belief that they are appreciated. Again I ask, is such work destructive of dealism are such men-lacking in (deals)

# RAILBOADS USITE MANKIND.

In raifrond engineering, think you that the men who through vergin forests and sandy deserts, through miasmatic swamps and rocky canyons across rivers and over mountains, carried the steel bands that now the manking so closely together, think you that these mer were engage I in an occupation Plety to kill their ideals? When the final balance is struck, I warrant that the debrt will not on the side of this grand army of peace of the present, as compared with the arm is of was of the past and present, for deals of ideal heroism, self-scribes, and devotion to duty. It seems like carrying coals to Newe, stle to speak in an audience like this of what the railroads have done for all countries for our railroads have done for all countries for our own country especially, and more particularly for the Pacific slope. It was not so long ago since I read of the leginning of construction of the Trans-Sberiau Railway, which now unites the Veloute and the Pocitic on the other continent. The Capetto-Cairo-Railway, too, has passed through the stages of its preliminary saw as and careful stages of its preliminary sarylys and partial construction. What centuries of fighting could not accomplish these two roads will in time accomplish. The light of civilisation will be spread on the Dark Continent, and its strong rays we borst the fetters and open the prison loops of suffering men and open the prison loses of suffering men and wom in Russla. Who, then is destructive of idealism the main whose works are a means, if but a humble one, of bringing his fellow beings into a larger contact with the wonders of creation, or he who, enveloped in the maintle of exclusiveness, bemoans this de

What is ig no ling's ton, that master is Lean to. Br ig Bo. be A Burney that master by the variation promote party of the variation of amost posts, could be a considered amost posts, and the work. It was a long, long review and the covered sterm, sudden treshers dearn in corry mather and shape, violent and refer rige against field type half frenzying a mind that amosts it should be bosy on other things, drought, sandation, finance, both, welding hural, and root in the viviage efficiently with a rate of the blank despart that a mange's collect upon, thanking that his rifle is all in process in the gun case. Behind everything rose the black frame of the Kashi bridge plate by plate, girler by girner, span by span, and each piece of it recalled Hatcheck, the all round man, who had stood by his enert with round man, who had stood by his ener with out falling him from the very first to

last."
If I desire to saw that in still another branch of engineering—the one of theory and harbour improvement there is nothing destructive of idealism. I word not go har for an illustricus example. What dames R. Eads has done for the people away in the Mississippi Valley in opening up to monitor of the Father of Witters stamps him as one of the beneficators of markind. For years he betterfactors of markind, For years for distances, overcame mound or impact, and obstacas, overcame prejudice, mance, and ignorance. Mr. Corbell, the stanich friend and principal assistant of Captain Eads on the this momentous work, quotes i m as saying, "I therefore undertike the work with a faith based upon the ever constant ordinances of G.d. Himse'f; and so certainly as He will spare my life and figuit is for two years more. I will give to the Mississippi, thi aigh H's Grace and by the application of His a deep, open, sale, and permanent outlet to the seas

## ART AND THE ENGINEER.

I think enough has been brought before you now to show clearly that engineering is not destructive of idealism. That much refuted, there still remains the charge that engineering is destructive of, or at least or engineering is destructive of, or at least in part responsible for, the decay of art. I propose to show that this statement also is false. Artist and romantic st appear as accusers. Again they point backward and say: "See what the past has created; what have we that can be placed by its side!" Their eyes are blinded to the changed condition of the changed condition. tion of things. They lack the syn pathetic understanding of the complex problems of the life of to day, and the material's 1's lation of these problems does not uppeal to their dea of the benefite'. For the intelligent enjoy ment and, more particularly, for the or tleism of any crowton, there is neded at least a fair knowledge of the underlying principles of construction, be that work a symphony, a poem, or a bridge. It is true that a symphony phony or peem appeals much note reachly to a large andience than does a lendle or a complicated piece of machinery; yet both the latter may be as much works of art as the former, a higher degree of development of the intellect being needed, however, to see feel their beauty. Every engineering states ture is the materialised idea of its function The ideas underlying engineering works are often ideal ones, and the works themselves therefore can be idealised. When these shows the engineering structure becomes a vark of

art.

In all ages that which most trull rily and characteristically embedfed in the Web was resentation of the life and the deast those times was deemed a wark of art. He is the artist who expresses most facilities what we think and feel. If such reconstruct a law in them had in our centrely a soler for lark of rew deas and materials to sold by sience pure and applied, but for the ack of adequate assumfacing power on the reast of the would be apostles of the State Pages of the Ture Artistic as the State Pages of the

The little hards between the many sections of the many sections of the many sections of the many sections. This spike the true artists

# IS IT PROFITABLE TO BEAUTIFY ENGINEERING Works

Is it promtable to beautify engineering structures. Here we stand before a momen-tons question. If the answer be given by the cons question. If the answer be given by the ingineer, or by one who holds that the status of a people is determined not merely by the a cancilated wealth of the nation, the quantity of goods produced, and of articles material tured, then it will be in the positive, ten times over. But if the man of , we ideals and measuring in times gives gives answer, it is locally to be an emphasic "No." This answer has been given too from in our own country, and the blame for the deep scars in the face of a cone time, in which and man of cents. for a new theorety dams and ragged cuts, case of the hild on the shallers of the engineer. Wayre broad might liberality and green. Where bend minded liberality and farsening policy govern the construction of greening works, as is the case in countries deritain our over, these works stand as orthwart products of the splint of the times symbol, also the best and highest in the life

So we also do to applied if the very incoming, to first. Have note in our destinative of causin, for his to words of academy? When period of a start was a face others. # et the Istumian structures MAINTENANCE, MATERIALS, AND Sorts for such improve METHODS OF ROAD WORK.

# By A. W. DEAS !

The date of the completion of the construction of a roadway surface marks the date when maintenance must commence. The materials and methods to be used are governed by the type of the constructed sur face; the urgency for prompt attention to maintenance is governed by the type of surface and by the quantity and quality of vehicular traffic: the cost of maintenance is governed primarily by the judgment used in selecting the types of surface for the roadway when constructing it. Too often necessity requires the construction of an inferior sur fale where a paved surface should be laid thus permitting a temporary economy in construction that is soon balanced by an excess sive charge for maintenance and renewal.

Maintenance is brought to its lowest terms when the roadway surface has been properly designed and constructed. A properly built roadway is that which has been properly designed to withstand existing and anticipated traffic and other conditions and built with good quality of material and workmanship. If all roadways were so built the mainten ance problem would cease to be a problem and there would be little occasion for conventions and discussions by roadmakers. condition will never be reached however, and for generations to come we shall have the

for generations to come we shall have the untiless problems of maintenance to solve. The terms "maintenance" and "repair," while not entirely synonymous, will, however, be considered as such herein, in order to permit as broad a treatment of the subject as possible in the fewest words.

# EARTH ROAD MAINTENANCE

The prevailing distacle to proper main The prevailing obstacle to proper in the tenin e of earth roads is lack of surface and sub-drainage. Surface drainage should be provided for by constructing and maintaining the roadway with proper and sufficient rown and by providing proper side-drains or gatters and culverts. When built on a long steep grade on a side hill, culverts should be placed frequently to carry the major roses and unler the road rather than water across and under the road rather than water across and under the road rather than tas is quite common) constructing so-called water bars to carry the water across and above the surface of the road. A grader or road machine should be used on earth roadways not more than twice a year, and preferably not more than twice a year. It should be used with care. If so is an I improper material have accumulated as the edges of the roadway, and are nulled on the edges of the roadway, and are pulled over to the surface of the road by the grader. over to the surface of the road by the gradient by should immediately be carted away from the surface. A road drag is almost in isoensable in the maint nance of a pusper stace on an earth roadway. The drag sould be used frequently and when the certh is moist. It is of no value when the earth is very dry, and it is of luttle value when wet. The drag will not fill large drag at the certh is controlled to the controlled of a controlled or the controlled of the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the controlled or the he faited away can newer. The drag will not in large the rossions, such as occur at each cod of a bridge, but it will keep the roadway in larly good condition for travel at all tim's a properly used. Where large depressions or in a roadway it is not good practice or in a roadway it is not good practice place broken stone or course gravel into the depressions, as such practice has a of high vectors a land section with a hold cach and.

# Sand Cray Rouse

Reads construct d with a mixture il cay sand cay may be considered as oth reads in an advanced stage. The educity orth reads in an advanced stage. The endurry conjector once of sand clay roadways is less fitted in the same meen r as earth road rys. Where self mod holes occur in sand cy roadways, it is obvisable to fill such some self sand, as it general such holes are mod by an excess of clay at the mixture. Out it said in plants are not constructed with the road argument one at sund and clay in the road argument one at sund and clay ith the right propertions of sand and elay of the original mixture, and maintenance of depend upon the conditions due to the xc -s of one material or the other. If the

\*Presented before the Pan American Road Congress at San Francisco, September 15, 1915 Chief engineer, Massachusetts Highway Commis-con, Boston, Mass.

entire surface is quite soft, and ruts badl; during wet weather, it is evidence that there is an excess of clay; therefore, in the maintenance of the roadway under such conditions, a thin layer of sand should be spread over the surface, and if the conditions are sufficiently bad to warrant it, the sand should be harrowed into the surface. On the other hand, if the surface does not be the other hand, it the surface does not be come compact, but rather shows indications of being sandy, a small quantity of clay should be spread upon the surface. As in the case of the ord-nary roadway, proper surface and sub-dramage should be provided to take care of the excess of surface and ground water.

# GRAVEL SURFACES

Gravel surfaces are frequently maintained to a certain extent by the use of the drag. A road machine should not be used on gravel surtaces except when it is desired to widen the travelled way or to smooth the surface lightly. Whenever a road machine is used on a gravel roadway for widening the travelled section, great care should be taken to remove from the surface any material other than gravel that. may be brought on by the use of the machine. Ruts or depressions occurring in a gravel road way should be repaired by filling lightly with gravel as near the same quality as that originally used in the surface as is obtainable. Maintenance of a gravel roadway is greatly assisted by applying uniformly at the rate of about or e-half gallon to the square yard once each year an asphaltic oil of about the maximum consistency that can properly be spread at air temperature with a common distributor. Such application not only furnishes a small amount of binder for the upper surface, but prevents the dispersion of the surface in the form of dust. The gravel surface herein referred to consists of material in which the mixture of roand stones and particles is quite uniformly ariable in size from minute particles to stones we or three inches in diameter. This definition is given on account of the fact that there are so many different ideas conveyed when the term gravel surface is mentioned.

# THE WATER-BOUND MACADAM TYPE.

Maintenance of a broken stone macadam water-bound macadam roadway) whenever constructed by the usual method is a more or less difficult problem, depending upon the traine that it has to withstand. If the traffic consists largely of steel-tyred vehicles, with very few rapidly-driven motor vehicles, a macadam roadway may be maintained by keeping its surface covered with a light layer of sand other suitable fine material, the object of this covering being to keep sufficient binder on the surface to prevent the stones in the surface from picking up. If, however, the traffic is sufficient to wear out the surface rapidly, as is the case when there are many motor-driven vehicles, the sand surface cannot be maintained, and it becomes necessary to use some other means of maintenance. use of a bituminous binder in the construction and maintenance of macadam roadways now become quite universal, and the problem if maintenance of bituminous-bound or sur faced roadways has now become simple.

Applying about one-half gallon to the square

yard of an asphaltic oil or refined tar at proper intervals permits of maintenance of macadam noadways under ordinary traffic for a long period, provided the subsequent applications are made at proper intervals. The interval between applications cannot be definitely stated; it can only be determined by the appoarance of the surface of the roadway. In Massachusetts it has been the practice for several years to maintain water bound macadam roadways by surface applications of so-called "cold oil," the oil used being what is termed by the manufacturers as "50 per cent oil. It has been found that one application a year is sufficient on most of the roadways where maintenance is effected in this manner The method of applying the oil is as follows: First, the road is swept lightly to remove all snaplus material from the surface. The oil is then applied by means of a pressure distributor, thus ensuring a complete and uniform covering. Immediately thereafter coarse sand is spread in sufficient quantity to entirely cover the oil. The amount of oil used in the first ambiention is approximately a half-gallon to the square yard, and on sub-sequent applications the amount varies from one-fifth to one-third of a gallon to the square yard. The asphalt contained in this oil forms a thin carpet on the macadam surface and not only prevents wear, but prevents distribution of dust. It has been found that the use of heavy oils, such as are known to the trade as "90 per cent. oils," assists in a satisfactory maintenance for only one or two years, after which the bituminous material has a tendency to crawl and become waxy. The lighter oils, having less body, do not have this objection. Refined tar is often used in the same manner as described above in the maintenance of macadam road-ways, and often gives quite satisfactory results.

# REPAIRS ON A BITUMINOUS BLANKET.

Repairs on a bituminous blanket or thin surface coat may be made by covering the section to be repaired with a thin coat of asphaltic oil or tar, as the case may be, and immediately covering with pea stone, fine gravel or coarse sand. This is assuming that repairs consist of renewing comparatively small sections of the coating that for reason may have disappeared. general fixed method can be described for making repairs due to imperfect workmanship, the use of too much bituminous material, or the irregular distribution of material, each case having to be treated in such a manner as experience may show to be best. Ordinarily, renewals of bituminous carpets may be made by a repetition of the usual process of constructing such carpets, except that it is advisable always to use less bituminous material per square yard for re-newal than was used in the original carpet.

So-called sand and oil-mixed road surfaces are either repaired or renewed by the addition of mixed material of the same quality and density as that used in the original surface.

Bituminous grouted or mixed macadam surfaces should not require early or frequent repairs or renewals if designed and constructed properly in the first instance. Should the necessity for repairs arise, however, they are or linarily made by the removal of all disintegrated or imperfect portions of the surface, and substituting a mixture of bitumen and small broken stone, the mixture being made either by mixing previous to application or by spreading stone and filling the voids by pouring. In renewing bituminous macadam surfaces it is not generally necessary to break up or remove any of the existing surface; the new surface may be added by spreading directly over the old surface. If, however, the old surface in addition to having become worn thin is worn very irregularly, it is advisable to loosen up, scarify, re-shape and roll the old surface before adding the new surface material.

# CEMENT-CONCRETE SURFACES.

The repair of cement-concrete surfaces is a comparatively new problem, as such surfaces have not been in use for many years, and such repairs as have been required have been due to imperfect workmanship or material. If the defects to be repaired consist of badlydisintegrated sections, they cannot be per manently repaired except by the removal of material in the sections to the full depth of the surface, replacing with new and proper concrete. If the defects to be repaired are minor, however, and consist merely of small depressions, they may be repaired by filling the depressions with a bituminous mixture. When a cement-concrete surface becomes worn sufficiently to appear to require renewal, it is impossible to renew it by adding a new thin coat of cement-concrete mixture; therefore, it may be said that a cement-con crete surface cannot be renewed with the same type of surface, but must be entirely and a new section constructed removed This would be expensive however, and it appears that the proper method of bringing up an old concrete surface is to cover it with a bituminous-bound surface in place of a

ement-concrete surface.

Block pavements of all kinds can be repaired or renewed only by the entire removal and replacement of the sections.

DACRE CHURCH, NEAR I LLSWATER.

There are many old villages and hamnets in the environs of the Laky District which are rather out of the beaten track of tourists, and are, therefore, not much visited; but they are well worth inspection, for all of them have then are intectural remains, not to speak of their old customs and legends, the latter being given material support by quantisteness and signs of every concervable form, and share

and signs of every conceivable form and shape. One of these villages is Dacic, a quaint old world retreat, a few miles from Calswater. The Castle, church, and houses still retain the vigour or their youth, so well are these northern structures able to withstand the ravages of time.

The Castle usually receives most attention from visiters, although there is nothing partendarly noteworthy about it, except its antiquity.

The church, however, is extremely interesting, for although it has been extensively restored and repaired from time to time, it has lost nothing of its architectural value. It was originally a Norman structure, the chancel being now the only remaining portion of this lite. The walls are constructed with a red sandstone in uncoursed rubble, the rest of the church being built with a white sandstone.

There is a small doorway in the south side of the chancel which appears to have been inserted at a later date, being transitional in character, as shown by the flat keystone, and the columns worked on the separate stones of the door jambs.

The latter was a step to making the column a separate feature, distinct from the jamb. The interior of the church is very interesting, much of its chaim, however, being lost by the insertion of new varnished woodwork and dull drab red floor tiles.

There are many beautiful wall monuments; some within the sanctuary should command special attention as a specimen of the crafts manship of the period 1769. They include a stone effigy of a knight, presumably Lord Diere, from whom the name of the village is derived, and two other pieces of stonework with crude surface cirving. The alter rail is of extreme age, and the baluster is a well-

wrought piece of wors.

Four peculiar stones in the churchyard very much weathered are said to be carvings of bears which were formerly on the Castle tower; and then there is underground masonry in the lower portion of the church yard, which is pointed out as being the head of a vaulted tunnel leading to the Castle. Il such quaint features of these old villages can only safely be presumed to have the significance attached to them by the local xiseacres, who are only too glad to talk to mybody seemingly interested in them. The writer was imitated into the key series of the symbols of Daere Church by the village imbereper, who was superintending the digging of new graves at the time. Possibly he was calling of Boniface.

Another village in the vicinity is Askham, perhaps the prettiest of all Lakeland villages, and well worth more than one visit to the architectural student.

Dare lies about five miles to the north of Pooley Bridge, at the northern head of Ulls water, and Askham about five miles to the south

THE LONDON COLNTY COUNCIL.

At the more age of the London County Council yesterday (lucsday art meson, the Education Committee repeated that the Professional Classes War Rehe's Council that with a view to inding work for artists in distress through the war, the wards of certain Council scheols, to be selected by the Council, may be decorated with finezes and panels, the decorations to remain the property of the Council. It is proposed that the subjects and designs shall be apervised by an expert committee of artists, and subantist of napproval to the Council before being carried out. In order that the work of the schools may not be interfered with the finezes and panels will be executed away from the school buildings, and fixed during the school vications. The Council will not be put to any expense in the matter. The committee recommended that the offer be accepted with thanks.

The Council was recommended by the Improvements Committee to consent to the postponement for another year—to Christmas, 1916—of the demolition of the properties at Nos. 197, 198, and 1.9, St. and, part of the site which has been acquired by the Duchy of Lancaster for the widening of the Stratd

The Treasury having refused sanction to the capital expenditure involved in the reconstruction of the horse tramways between the West India Docks via Burdett Road and Grove Road to Victoria Park and those in trange Road, Southwark Park Road, and Rotherhithe New Road, Deptiond, it was reported that it will be necessary to effect extensive repairs to the tracks in ord r to make the highway safe for vehicular traffic at an estimated cost of £6,250.

Some of the own is of property in the Tabard Street slum area, which is being cleared by the Council, refused to accept the compensation offered, and the disputed claims have been a teed by arbitration. In one case, where £2,002 was claimed, the council offered £200. The arbitrator now awards the lundlord £31 16s. In another case, where £625 was claimed and the Council offered £20, the arbitrator awards £5, this being for four houses.

# THE DISMISSAL OF THE LAND VALUATION STAFF.

Mr. McKenna, the Chancellor of the Exchequer, received on Friday afternoon a deputation of the "retrenchell" professional staff of the Land Valuation Department. The deputation, which was introduced by Mr. C. E. Price, M.P., the Liberal member for Central Edinburgh, consisted of delegates representing England, Scotland, and Wales.

Mr. Price, before introducing the speakers gave a resume of the case of the temporary professional staff, and arged that the dismissals would result in schools less of become; and, mither, that in view of in mements and promises held out it was the duty of the Government to find these me; employment in other departments where their services would be of value to the State.

Mr. Laimutt, Manchester, dealt with the broad aspect of the case, and especially drew

Mr. Lamutt, Manchester, dealt with the broad aspect of the case, and especially drew the attention of the Chancel or to the loss of revenue which would assume in colate duty alone, and also to the fact that the sales on which increment value duty has revealed could not be investigated, and that consequently a loss of revenue would use it, as the depleted staff was inadquate for deding with the work.

ing with the work.

Mr. Crampton pointed out the hardship resulting to men in the department which had considerably relied upon promises made by responsible officials as to the country of their position, and urged upon the three dier to show every consideration to these men in eligible for minimize weaver. He referred to the disparity of teatment in the cases of men who, at the outbreak of war, were given permission to enlist, with the benefit of their civil pay tless 7s, per weeks and a premise of reinstatement, and those who were refused such permission, and who were now dismissed without any consideration.

Mr. Agate, Manchester, declared that eligible military men were now at a disadvantage in consequence of the War Office

z non cutside the department to and have been suitably fixed in the department.

Mr. M.K. ma gave the delegates a patient heat, 2, discussed with them the various poults ased, and promised to make further inquires.

# TEMPERATURE EXPERIMENTS AT LAHORE.

Under this title, Mr. W. S. Derman, M Inst CE, executive engineer in the Panjab R sais and Buildings branch of the Panla Worss Department, furnished a paper to the Panjab Congress of 1915. He men toned that in the design for the new Government Press stress was laid on the necessity for keeping down the temperature of the magnitude room as far as possible, and it was, therefore, decided to carry out exparaments

with vir. as rooms; materials. The experiments, as there was a row of rooms, each 12 fr. by 8 ft. for the mental staff englighed at the Press. These rooms were reased with red eternition batters with an eternitical below: grey eternition batters in the test as leaves or rugated sheets on batters at 122 B.W.G. corrugated sheets on batters at 122 B.W.G. corrugated from sheets on jair or earlie, with a 25 m. fibro coment coding on an hearist without the eading on 2 to batters over 3 m. beards, on batters with the sheets to intend with two coars of white corrugal paint, and on batters with the sheets unpaint 1. The observations were evidently made with great care by Mr. Dorman, at 1 he arrived at the following results: or In any tail by period the maximum tem-The lemain's concerned was very suitable man, at I be arrived at the following results: or In any tin lay period the maximum temperature seldem varied by more than 5 degrees. If The colour of the eternit tiles, grey or red, made no difference in the temperature. If The addition of an eternit ceiling is, we the rafters was of no advantage in reducing temperature. Id The substitution of bear is for batters below the eternit added Rs. 12-13-3 per hundred sq. ft. to the expense and reduced the maximum temperaexpense and reduced the maximum tempera expense and reduced the maximum temperatur iv 2 legres. (c) Asbestos corrugated whors was double the cost of the asbistone roofing, and only 1 degree coder. (f) Corrugated in a con-batters was 1 or 2 degrees hotter than the asbestos corrugated sheets, and one-third the price. (g) Painting the corrugated from white hid in effect in reducing temperature. (b) The use of boards instead of batters under the corrugated from reducing the maximum temperature, and kent stead of battens under the corrugated from reduced the maximum temperature, and kepther on from heating up so soon. (i) The addit media filter comesticeling added largely to the cost, and was not worth the expense. (i) There was no alwantage in having batters between the boarding and the control of the cost.

A second set of experiments were made A second set of experiments were made with three-ply metas of on a boards, with three-ply mathoid on felt and 3-in, boards, with red pollife tiles on batters and a felm pine cellul, with Remain tiles on batters, and with sugle Allahabad tiles on batters. These experiments confirm the test set, and These experiments confirm 1 the first set, and showed that as for as the temperature was concerned, there was very little difference in the materials tiked. # THE MEDIEVAL ARCHITECTURE OF THE WEY VALLEY.

In the course of an interesting paper read recently by Mr. E. Chapman before the Lendon Natural History Society, the author

The valley was so strongly held, and was so largely royal demesne, that the long struggle between Crown and Nobles lett little mark upon it, but with the rise and decline of monasticism, and with the struggle between the church and state its history is closely linked. The documentary history of Surrey begins with a charter, probably a forgery, but a very early one, of Chertsey Abbey. The great monastic revival of the eleventh and twelfth centuries saw the reform of the Benedictine rule, and the foundation under an Englishman, Stephen Harding, of the Cistercian order. In 1128 the Bishop of Winchester brought over from France twelve monks of the new order, and gave them lands at Waverley by Farnham, where, under the renewed encouragement of successive bishops. they established a great abbey. The story this abbey forms in itself a synopsis of the story of monasticism in England. We see the monks busy with their buildings, industhe monks with their country side, raising great flocks of sheep on the neighbouring hills, entertaining great nobles and kings, for here in 1208 came John to spend four days of Holy Week, bringing with him two tuns of wine, no doubt to mitigate the severity of of wine, no doubt to mitizate the severity of the Lenten fast, and here, in 1225, came the young Henry III., and was admitted to the confraternity in the chapter house. At this date the monks were in the midst of rebuilding: they were replacing their first Norman Abbey with a beautiful Early English structure. The new clurch was completed in 1230, and now the monks seemed at the beight of their presents. In 1240 a young height of their prosperity. In 1240 a young shoemaker charged with homicide took sanctuary with them, but after some months was seized by the king's orders and carried off to prison. The Abbot, after a vain appeal to to prison. The Abbot, after a vain appeal to the Papal Legate, turned to the king him self, producing the charters and privileges of his order, convincing him "that the precincts of abbeys and their estates were by apostolical authority exempted from the encroachments of all wicked and profane per-sons, and inviolable as the altars of churches. The shoemaker was restored to the monks, the officers who arrested him were condemned to ask pardon at the convent gates, and afterwards to be publicly whipped, "which sentence having been fully executed upon them by the Dean of the House and the Vicar of Farnham, they were absolved in form, and, having a sufficient penance enjoined them, were dismissed.

Nor was this the only incident in the great struzzle which the valley witnessed. Already in July, 1174. Henry II. had passed through struggle which the valley witnessed. Guildford on his swift penitential journey to Canterbury, after the murder of Becket, and in 1199 Ruald de Calva had founded, in Thomas, the Austin proc.
Thomas, The beautiful little honour of St Newark at Ripley. hurch of East Clandon also dates from about this time and bears the same dedication.

Of the rise and development of media-val architecture, the valley presents many in-teresting, but no very rich or famous illus-trations. The district was not wealthy, and harding materials were not of the best what a rural population could do with flint and bulk and Bargate stone, with tiles and Horsbam slabs, and with here and there a shoft of sussex marble, was done. Of the

main stru ture of St. Mary's, Guildford, whose walls were enriched in the thirteenth century by paintings which remain, the royal keep of Guildford, and the tiny village church of Pyrford. Of Early English work the most notable remains are those of Waverey Abbey, the beautiful western doorway of Shere, and the great E. window of seven lights at Ockham. The architectural needs of the district do not seem to have undergone any great expansion in the fourteenth cen-Here and there a fine new window was opened, as at Shere, but I do not recall any building wholly in Decorated work, and similarly the examples of Perpendicular work are mostly to be found in enlargements and modifications of older buildings. Then at the very close of our period, we see the needs of a new time finding satisfaction in two buildings, both instinct with the old Gothic beauty, the great manor house of Sutton, and the Grammar School at Guild-

# ---NEW INDUSTRY FOR HUDDERS FIELD.

The directors of British dyes have, after long deliberation, decided definitely to set up great works in Huddersfield, in close proximity to those of Messrs, Read, Holliday and Sons, Limited, which they took over some months ago. Huddersfield will thus become the chief colour-making centre of the country, and its population and rateable value will be largely increased, as the company is expected to have 10,000 workers in its service. The Mayor and Corporation will undertake to make the trade effluent satisfactory to the river authority, as they already do. The directors considered the relative advantages of Manchester (Trafford Patk. Selby, Leeds, Goole, Widnes, and Huddersfield, and eventually the choice lay between the last two named. The scale protween the last two named. The scale bably turned in favour of Huddersfield. doubt owing to the proximity of Messrs. Read, Holliday and Sons works, but also because the town can offer a large supply of good soft water, and is well situated for supplying all the Lancashire and Yorkshire textile dis-The company has acquired about 250 acres of land for buildings and yards, extending from the river Colne in Leeds Road up the Dalton Valley, and has let contracts amounting to some £250,000.

The housing problem which will be created at Huddersfield by the establishment of these works was discussed at a meeting of the Town Council on Wednesday. Alderman Smith, chairman of the Housing and Town Planning Committee, said that already the applications for houses exceeded the number of houses that the council had decided to build. Councillor H. Dawson said if only 5,000 men were employed at the British Dye Company's works it would mean an increased population of 25,000, with all that was necessary for them. would mean an increased population He suggested that a special meeting of the General Purposes Committee should be called to consider the question. Councillor Jagger urged that in addition to corporation enter-prise private builders should be encouraged to erect cottage property. Alderman Smith promised that the question should come before the General Purposes Committee.

The Council of the Surveyors Institution have nominated Mr. Howard Martin, past-president, 27. Chancery Lane, W.C., as the representative of the institution on the Tribunal of Appeal under Sec. 176 of the London Building Act. 1894, to fill the vacancy caused by the death of the late Mr. Herbert T. Steward.

# RAILWAY TERMINALS.

At the Surveyors' Institution on October 15, Mr. James Crossland gave a lecture, illustrated by lantern slides, on "The Plac ing, Design, and Arrangement of Rankay Terminals." The common view, he said, was that a big railway station should be placed in the very heart of a town, but he thought that wrong, because it would generally be found that slums accumulated in the vicinity of large stations. If, therefore, a station was some distance from the centre, it led to decent development of the town from the station to the centre. A railway running through a town necessarily created a kind of barrier, and therefore it might just as well be a barrier between the residential and the factory areas.

He discussed the methods of bringing a railway into a town, on the ordinary ground level, above, or below, and expressed the opinion that if a railway could be brought in below the surface it was obviously the best. The advantages of having through stations instead of terminals were referred to, and the lecturer urged that architects, in designing a railway station, should strive to express railway station, and not an hotel or a bank.

In conclusion, he dwelt on the design of small country stations, and by slides showed how, by simple design and an arrangement of foliage, these could be made to look very pleasing. Incidentally, he expressed the opinion that in large towns the right way to deal with traffic was to entirely separate the suburban from the main line traffic.

The discussion was opened by Mr. T. H. Mawson, who said that, as city planners they must have some idea of the areas required for the probable traffic of a station they were planning which would provide for the growth of the town for twenty, thirty, or fifty years. This was necessary in order to avoid the constant alterations of stations and the expenditure of money which did not bring in any return, not to mention the up-setting of the plan of a town.

Mr. Davidge expressed the opinion that within the next twenty years the whole of the large railways running into London would have to reorganise their systems of arrangement of suburban traffic

After having been closed for about six years the old Formby Cement Works, Frindsbury, have been re-opened by the Medway Standard Portland Cement Company, Ltd., and are now employing upwards of lifty men. Mr. John Clarke, for twenty-two years manager of the Artillery and Albion Works, Greenhithe and Shoreham, is in charge of the works.

At the last meeting of the Stafford Rural District Council a letter was read from the Road Board expressing their appreciation of the valuable services which Mr. Idiens, the council's surveyor, had rendered in connection with the construction and improvement of roads, and asking the consent of the council to make him some monetary payment council consented.

The funeral of Mr. William Francis Hile, of The funeral of Mr. William Francis Hile, of Little Bayham, Lamberhurst (clerk of works on the Bayham Estate), who died suddenly at the age of sixty-four, took place at Frant, on Monday, the Rev. E. S. Jose, chaplain to the Marquis Camden, conducting the service. The coffin was borne to the grave by members of the staff. There were numerous beautiful floral tokens, amongst the senders being the Marquis and Marchioness Camden.

Marquis and Marchioness Camden.

Private Edgar James Edgar, younger son of Mr. James Edgar, of Cronkbourne Road, Douglas, Isle of Man, has been killed in action in the Gallipoli Peninsula. Private Edgar was just twenty-nine years of age. On finishing his education at the Douglas secondary school, he was articled as a pupil to Mr. A. E. Prescott, then borough surveyor of Douglas, and now of Eastbourne. After completing his articles. Private Edgar held several appointments in Canada, and later in the city surveyor's office at Sydney. At the outbreak of war he was an assistant engineer to the Public Works Department, New South Wales. He was appointed Second-Lieutenant in the Submarine Defence Force of Sydney Harbour. When the menace of an attack on the harbour was removed, he joined a signalling company as a private, and proceeded to the Dardanelles, where he met his death.

# THE STREET SYSTEM IN CITY PLANNING.

By NELSON P. LEWIS, †

There have been a few cases where important cities have been planned as a unit; where the administrative centre, the commercial, industrial, and residential districts the lines of transportation and their ter minals, have been laid out after careful study to meet conditions which could be confidently expected or to a large degree controlled. Washington is one of the most notable instances of such city planning. The city planner usually finds, however, that the beginning has already been made, a begin ning which may prove a serious handicap or may, though less frequently, be an admir able nucleus for the larger plan. Most old cities have simply grown with very little planning. Comprehensive plans, where such have been prepared, are of comparatively recent date, and have had to adapt themselves as well as might be to the older portions of the towns as they were, and make designs for sections not yet developed conform with the haphazard growth which had already taken place. Plans of such cities, therefore, commonly consist of a number of separate designs more or less unrelated to each other, abutting upon the confused and uneconomic system of streets in the old town, which in most cases has persisted as the actual centre.

# STREETS IN UNDEVELOPED SECTIONS.

In every city, however, there are large areas not yet developed and not even planned, where opportunities are presented to design a street system, the different parts of which will be properly located with respect to each other and to such modification of the system of the existing town as may ultimately be carried into effect. Too often these undeveloped sections are planned as if they were so many different urban areas unrelated to each other or to the original city, and too often the obvious blunders of the older sections are repeated in the new additions.

In nearly all cases where a street plan is to be devised, whether it be for a large area which can be treated almost as an entire city in itself, or for a smaller tract contiguous to the built-up portion of an important city, the first essential is an accurate plan of the exist ing roads showing their widths and the build ings fronting upon them. The old highways which serve to connect villages or centres of population have a good excuse for existence and serve a useful purpose; they lead where people want to go and are likely to be fairly Their alignment may be somewhat direct. faulty, their grade excessive in some places, and their widths inadequate in view of the fact that they will naturally become the main lines of traffic for the urban district which will include them. With such straightening and widening as may be straightening and widening deemed necessary and such changes in line as will reduce excessive grades, these old roads will be the logical basis of the street plan which is to be prepared. When they have been plotted, it will be obvious that additional roads will be needed, some to establish cross connections, others to give greater directness to the roads traversing the entire territory, others as bypasses around groups of buildings so located as to render the widening of some portions of the old roads unduly expensive, and still others to furnish lines of main drainage along the valleys through which the lateral sewers and subsidiary trunks must ultimately find their

While no one can predict with any certainty the precise manner in which any city will grow, the purpose of the preliminary design is to establish lines of least resistance which future development is quite likely to follow The streets laid down in the plan will pro bably become the main arteries of traffic.

· Abstract of a paper presented last month before he International Engineering Congress at San Francisco.

+ Chie' engineer, Board of Estimates and Apportionment, New York City.

They will divide the territory into a series of pregular hences having three, four, or more sides, which sides may be a quarter or half a mile or more in length. The c areas must be subdivided by secondary tools in the location of which regard should be paid wherever possible to property subdivision, to the possibility them developing into main traffic roads, and to the avoidance of awkward junc-tions with the main roads aiready laid down, which would is sult in confusion of traffic. It is difficult to say how wide the primary and secondary roads should be made. The Royal Commission on London Traffic in its report, made some years ago after an exhaustive study, suggested the following widths: Main avenues 140 ft., first class arterial streets 100 ft., second class arterial streets 80 ft., third class streets 60 ft., fourth class streets 40 to 69 ft. This scale of widths may be somewhat over generous and might involve unnecessarily great cost

Lastly will come the minor streets, which will serve almost entirely for access to dwellings. Their alignment and grades are of little importance. The chief concern is that they should be so laid out as to furnish ample light and air and discourage, if net prevent, a too intensive development with rear build ings in case the city ordnances do not prohibit this menace to health and decent living. To plan far in advance the precise location of these minor streets is not necessary, if it be not unwise. There is no reason why a street which is to be devoted to private residences should be long and straight. Among the most attractive features of a city are small residen tial areas treated in a distinctive way, each with a character of its own, which the visitor stumbles upon with agreeable surprise. If these minor subdivisions are planned at d.fferent times or by different persons, this variety in treatment is more likely to be realised. The important thing is that the skeleton should be created first.

While directness is desirable in the main and even the secondary streets, it does not follow that such streets should be perfectly straight; in fact, straight streets are seldon interesting. Neither need circumferential or curved streets be laid out with perfect symme-try. In studying a plan the slightest depar ture from symmetry is noticeable, but on ground it cannot be detected. One can ride or walk along a boulevard following a sweeping curve and be unconscious of the fact that its radius is frequently changing.

Mr. George Elton Sedding, Lance Corporal, Signalling Section, 7th Norfolk Regiment, elder son of the late John D. Sedding, F.R.I.B.A., and grandson of the late Rev. E. D. Tinling, tranon of Gloncester, died in a London hespital on Satarday last from wounds received in action in Flanders, aged thirty three.

The Sutton Trustees have purchased Brom-The Sutton Trustees have purchased Bromwell House Estate in Wick Road, Brislington, Bristol, where they propose to build 240 workmen's dwellings, at a cost of £70,000. As the trustees have been prohibited by the courts from spending any of their funds upon buildings until the close of the war, they will not be able to proceed with their scheme at ones.

At the last meeting of Stirling Town Coun-At the last meeting of Stirling Town Council it was reported that certain donors had intimated their willingness to supply a stained-glass window for the principal staircase leading to the council chamber in the new Municipal Chambers. A design, executed by Mr. Gillespie, architect of the buildings, has been accepted. The design represents King Alexander II preparation of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council of the Principal Council timespie, arcintect of the buildings, has been accepted. The design represents King Alexander II, presenting to the Process of Stirling the Royal Charter of August 13, 1226, by which he granted the burgesses of Stirling a weekly market, a guild, and other privaleges

market, a guild, and other privibges. The death has escurred after a short illness, at his residence, Menai Bridge, at the age of sixty-four, of Mr. Evan Parry, builder and contractor. Mr. Parry was a native of Menai Bridge, and succeeded nearly forty years ago to the extensive business carried on by his uncle, the late Mr. Richard Parry, and carried out many important building contracts, including soveral schools and chanels in the county, the National Provincial Bank. Metai Bridge, Ceris, the residence of Mr. J. R. Davies, D.L., and the Marquis of Anglesey's estate office. He excented extensive structural alterations some years ago to Gadlys, the residence of the late Colonel McCorquodale. Mr. Parry leaves a widow.

# Our Illustrations.

NEW CENTRAL OFFICES, ROSEBERY AVENUE, E.C., FOR THE METRO POLITAN WATER BOARD. ROSEBERY

These buildings have been in course of creet. in for some months. The competition drawings submitted by the six invited architests were all idustrated in the Building News for June 5, 1914, and the perspective here with reproduced, showing Mr. H. Austen Hall's front part of the premises now in hand, was exhibited at the Royal Academy this sea sen. It shows several alterations upon the original elevation, and by further study the dites have been much improved, although the lay cut of the plans seems to have been substantially adhered to. The chimneys seen in the picture were absent in the sketch sub-mitted in the competition. We published a block plan of the site and the two chief floors buildings, giving a fairly full descripto n of this scheme, and pointing out the main essentials of the five other plans. Their architects were Messrs, Brown and Barrow, Messrs, H. T. Hare and H. S. East, Mr. Edwir Cooper, Messis, Herbert O. Ellis and Clarke and Messis, E. T. Hall and Son.

DECORATION OF THE SCHOOL CHAPEL, CHRIST'S HOSPITAL, HORSHAM.

We commenced this series of tempera paintings, executed by Mr. Frank Brangwyn, R.A., illustrative of the Fathers of the Church, on Wednesday, October 6, and conthatch, in wednesday, teleber 6, and continued their illustration in the following number. To day we give two more of the panels, which are, like the remainder, based upon a scheme of blues, warm grey, and old gold in the figure work, with a blue sky serving as a band round the chapel to bind the discretions together as a first all of the descriptions together as a first all of the discretions as a first all of the discretions are discretions. the decetations together as a frieze above the top of the cak stalls, the bays being divided the wall shafts carrying the roof. by the wall shatts carrying the root. The subjects now given are St. Augustine at Ebbs-fleet. "Turn, O Lord, Thy wrath from this people," and St. Ambrose Training the Choir in his Chinch at Milan, v.D. 385. Other subects will follow.

KING EDWARD VII. MEMORIAL EAST

SUSSEX HOSPITAL HASTINGS.
This hospital is being built on a site to the north of the existing hospital on the high ground. The present building is opposite to the pier, bandstand, and promenade, and, therefore, does not enjoy the quiet necessary to an institution of this kind. It is seen that the hospital is designed on the ordinary pavilion system; it has to adapt itself to a very difficult site, which has a fall of nearly 60 tt. difficult site, which has a tall of nearly 60 ft. from west to east. The buildings will be entirely of brick, with a few stone dressings, the tools to be evered with Westmoreland green slate. The design is by Messrs, John Saxon Snell and Stanley M. Spoor, architects, of Great James Street, Bedford Row, W.C. The draw.i.2 shown was at this year's Royal Academy exhibition.

PORCH AT VERNON, EURE, FRANCE.

SOANE MEDITLION AND TRAVELLING STUDENT-SHIP SKEICHES BY MR ALICK C. HORSNELL. This excellent water colour sketch is handled in a particularly transparent way, and, archi-tecturally, it makes a very suggestive drawing of a broad and rich piece of work. The study thus directly done is executed with knowledge and minimum effort. It is by Mr. Aliek G. Horsnell, Some Medallist and Tite Prizeman Horsnell, Some Medallist and Tite Prizeman of the R.I.B.A. The subject is the portal of the interesting church at Vernon, on the Seine. The building has a choir of the 12th Century, a nave of the 14th Century, with chapels added in the 15th Century. The work of this very mixed in style and of distinct teriods which differ in detail. In the second of angelong the left stands the temb of Marie Magarard wife it Sein Imbert d'Harcqueney, in the radit a sle is a Resurrection group by Magnard wife of Slem Imbert d'Harege nev. The care half a doz fine tanestries of 17th Certiny differ in the limit of the limit of the limit of the limit of the limit of the limit of the limit of the major the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the limit of the li

Chateau de Bizy. This mansion was destroyed during the Revolution. It was the property of the Duc de Penthievre. The original drawing was recently exhibited in the large gallery at Conduit Street with the rest of Mr. Horsnell's studentship sketches.

AND PRESBYTERY. SOLTHWOLD CATHOLIC

This church is designed in the Late 15th Century style, of the same period as that of the ancient parish church of St. Edmund at Southwold. When it came to erecting this comparatively small church, it was necessary to consider in what way it should be treated in order not to compare unfavourably with the magnificent Mediceval church near by The architects determined to make the whole of the sanctuary form the lower walls of the massive tower. The treatment is ex tremely simple, and a noticeable feature is that no buttresses are used. The walls inter nally are plastered and are to be panelled to a height of 7 ft. The contract for the whole building of the church was £3,000 The architects are Messrs, Benedict and Beart-Foss, of Great Marlhorough Street, W The drawing reproduced to-day was shown at the Royal Academy Exhibition this year. The plan, with the view, shows the arrangement of the presbytery with the church at the chancel

OLD ENGLISH FURNITURE.

The pair of 17th Century oak chests on legs drawn in the upper half of the accomparying sheet of sketches came from Fritwell Manor, Banbury, Oxon. Both pieces, singularly harmonise, though so different in size. The lower chest, from another private collection, differs in style, which is more akin to the dacidean manner, with its pretty, simple pat-Cremwellian chair is true to date and detail, and so is the Yorkshire chair from an eld yeoman's house in the Wolds. ---

OBITUARY,

The death occurred at his residence, Caris The death occurred at his residence, Carishtooke House. Southey Street, Nottingham, on Monday in last week, of Mr. Richard Charles Sutton, principal of the firm of Messrs. Sutton and Sons, architects, of Bromley House, in that city. Mr. Sutton, who has died at the age of 81, was a pupil of the late Mr. S. S. Teulon, and afterwards established a large practice in his native city, where he built many churches schools wage. where he built many churches, schools, ware-houses, shops, and domestic buildings. For fourteen years, 1837-1901, he was a member of the Nottingham Corporation.

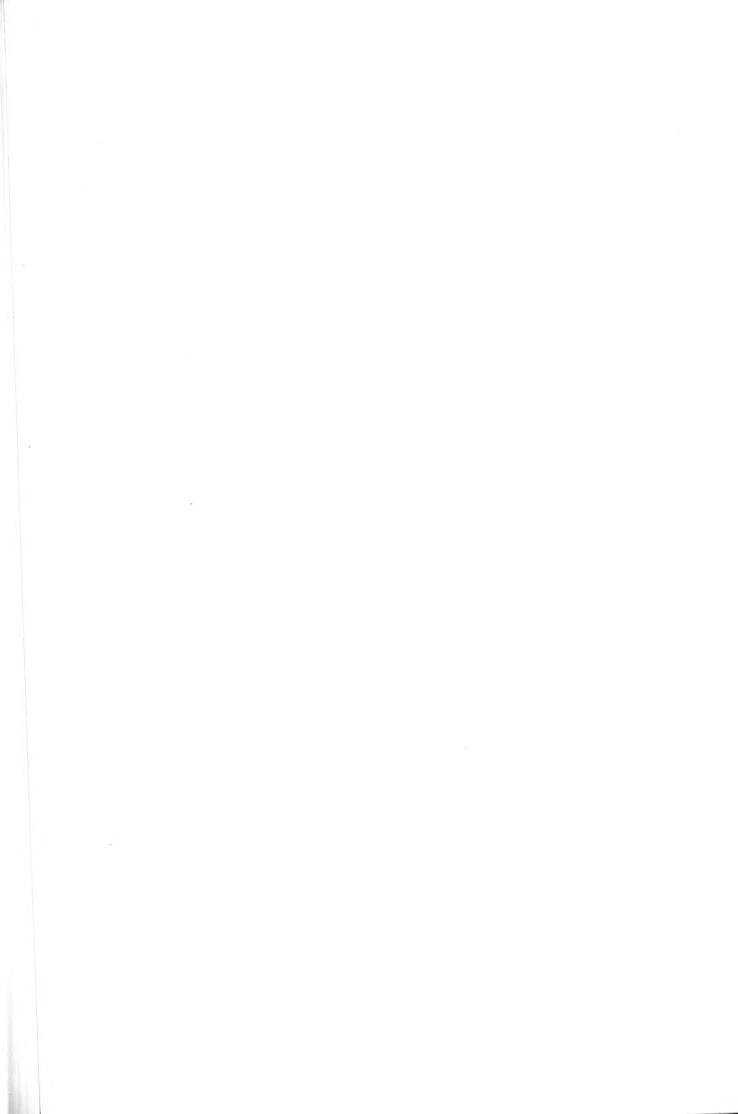

We regret to announce the death, which occurred on the 19th inst., at his residence in Tewit Well Avenue, Harrogate, of Mr. George Bertram Bulmer, F.R. I.B.A., of the Leeds firm of Messrs. Henry Perkin and G. B. Bulmer, architects, City Chambers, Infirmary Street. Mr. Bulmer, who was sixty-four years of age, was a past-president of the Leeds and West Yorkshire the Leeds and West Yorkshire Society of Architects, and had been a Fellow of the Royal Institute of British Architects since Among the Leeds buildings in the creetion of which he was concerned are the head office of the Yorkshire Penny Bank, the National Provincial Bank, the United Coun National Provincial Bank, the Union and National ties Bank, the Scottish Union and National Insurance Buildings, the Union of London and Smith's Bank, Atlas Chambers, City Chambers, Cabinet Chambers, and West Bank Chambers The funeral service was held in Peter's Church, Harrogate, on Friday.

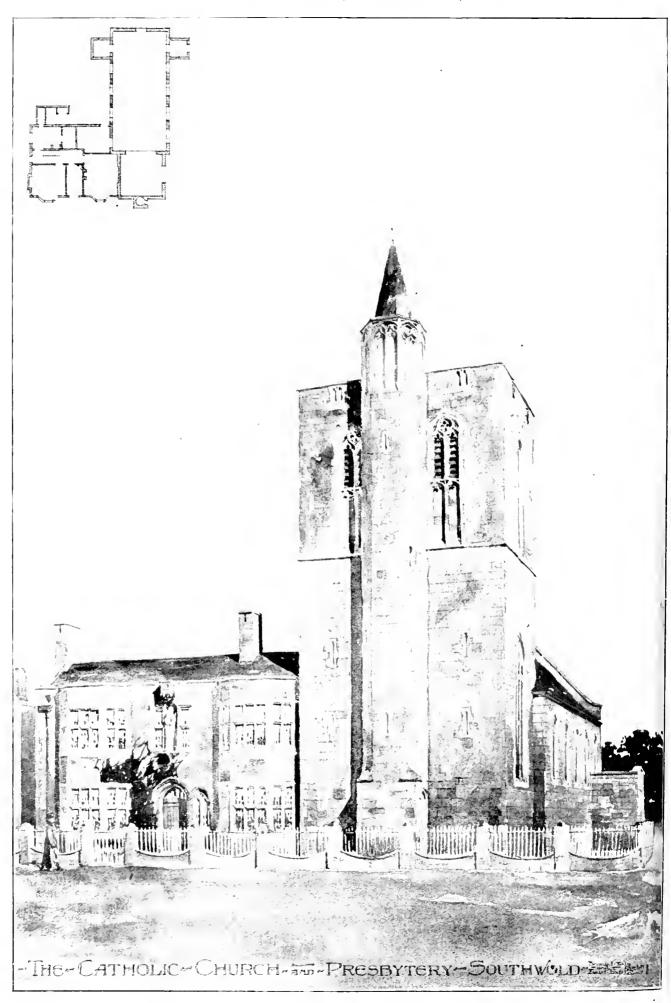

Mr. Gordon Sanderson, a clever young architectural draughtsman and architect, has been killed in France, at the age of twenty After serving some time in London architect's office be went out to Egypt, and was engaged in Government surk there. He went to Scotland, marrying on Edinburgh lady, and was over a year balf in the office of Mr. J. B. Dunn, F.R.I.B.A. of Frederick Street, Edinburgh. Out of over a hundred and fifty applicants be was selected to fill an important post on the Archaelogical Survey of India, having charge of the buildings of arel vological value sart fith ancient for tilled ensight formal in the United Provinces and the Punjab. Edward I of England creeked the wastle of Werner test in the right bank of the Seine. The stables along are now left intact of the dian visit. Of commarding appearance and physique, being over six feet four inches in height, he had a charming personality, and was a very fine pen and ink and pencil draughtsmanship. One of his earlier works was a charmingly-illustrated book on the Yeoman Farmhouses of Yorkshire. could illustrate the Indian temples with their filagree work in a remarkable manner. Although offered an A.D.C. appointment, he preferred to see some fighting, being in charge of the Machine-gun Section of the 2nd Gurkhas. Lieutenant-Colonel Boilean writes of him to Mrs. Sanderson:—"It is with the greatest sorrow that I have to write to you about your gallant husband. was talking to him only about half an hour be-tore he was wounded. He was as usual full of energy and keenness, and then unfortunately was wounded and removed from our midst about an hour afterwards. I do not think I ever knew a man who was so universally respected and beloved, and his cheery, brave spirit was a great asset to us. He took up machine-guns with that keenness that charan absolute expert. I am thankful to say he did not suffer at all, for he was nnconscious when I saw him, and must have been so at once. May I offer you my deepest sympathy, for if we as a regiment deplore his loss, I know what sorrow it must be to you. Mr. J. B. Dunn, in sending particulars to us of Mr. Sanderson, says:— "It is sad to think such a very clever fellow should have been killed so young. . . He was a fine young fellow, and a highly-skilled draughts-He was buried in the British Ceme-

man. He was buried in the british conse-tery at Gorre, not far from Bethune. Professor Vivian Byam Lewes, Professor of Chemistry at the Royal Naval College, Greenwich, and Chief Superintending Gas Examiner to the City of London, died on Saturday from an attack of double pneumonn. He arrived at Moli, Flintshire, on Tuesday in last week, and delivered a lecture under the auspices of the Educational Trust on "The Explosives used in the Great War." He was afterwards in a state of collapse, and was removed to Hafad, near Mold, the residence of Mr. William Buckley, Chairman of the North Wales Munitions Board, whose guest he was to be during his visit, and succumbed four days later. Professor Lewes was born in 1852, and was educated at University College, London, Among his published works are "Service Chemistry," "Acetylene," and "Liquid and Gaseous Acctylene, Fuel." He was a contributor of many papers to the Society of Arts, the Chemical Society, the Chemical Institute, and the Royal Society, and had lectured before the Royal Institute of British Architects and many other societies on the relative values of illuminants,

and kindred subjects.

Mr. George Macfarlane, J.P., the oldest master builder in Manchester, and an ex-president of the Master Builders' Associa-tion of Great Britain and Ireland, died on Friday at his residence, Oxford Road, Manhester, in his seventy-seventh year. Macfarlane, who was a native of Perthshire, where he was born in 1839, went to Manchester in 1854, after spending a little time at Bolton. He began business a few years later as a builder. In 1876 he became a member of the Manchester Builders' Association. and, in due time, its president. In that capacity he took a leading part in the settlement of several labour disputes affecting the building trade. It was, however, in the work of the administration of the Poor-law that M. Macfarlane, outside his business activi-ties, took the widest interest. He was elected a member of the Chorlton Board of Guardians now the South Manchester Board-in 1901, and afterwards became chairman of the board, and arterwards became charman or dis-board, a position which he relinquished a few years ago. Mr. Macfarlane was an ardent advocate of the sheme for the amalgama-tin of the Manchester, Chorlton, and Prest-wich Boards, and one of the principal witnesses who supported, at the Local Government inquiry, the proposal which has now come into operation. For many years Mr. Macfarlane was also a Governor of Henshaw's Blind Asylum. He had held high office in Freemasonry,

We have little doubt that the Shilling Fund the Daily Telegraph has started to provide a fitting memorial statue of Ninse Cavell in London at a cost of £2,000 will be fully subscribed ere this is read, and that the genius of Sir George Frampton, who is to design it. will ensure a fitting tribute to the heroic woman whose name will go down to posterity as the most shining example of British self sacrifice of her age. We should like to know by this time next week that the initiative of the Daily Telegraph has been so many times more than needfully responded to that those responsible will feel justified in promot ing the erection of some building consecrated to the objects to which Miss Cavell devoted her life and energies, and that many more British women will in the future be thus enabled to emulate the devotion and comage of the lady who has, in its highest degree, embodied the attributes which are the gory of the sex, but which the "Nana Sahib of Belgium," as the New York Herold calls her murderer, was naturally incapable of appre-

It is stated that "at an early date" the Government will lay before Parliament a Bill to prohibit the raising of rents through out the country during war. The statement is a vague one, but it is impossible to resist the conviction, bearing in mind some of the legislation of this Covernment, that more harm than good may result from a hard and fast general prohibition. For the glaring cases alleged of the increase of rentals of the houses of workers, where the demand has been due to the sudden large in rease of workmen in certain districts, owing to the starting or enlarging of factories for the production of munitions and the like, there can be no excuse. But surely the ordinary property owner, who is likely to pay more than his share of increased taxation, is not to be the scapegoat, while traders are making a harvest in many cases out of the large in crease in the prices of commodities! For the present scarcity of houses the Govern ment itself is mainly responsible. It has handicapped the builder for years past by exceptional taxation, and its present neces sities are the fruit of that and other doubt less benevolent but ill-conceived impulses of Mr. Lloyd George. We are told that the matter has been "referred to other depart nents of State." We trust they are comsetent and well-informed, or we shall have mother muddle added to the many already nade.

Public-house property is just now in a oad way, and it does not seem likely to get unch better during this war time. These censed houses are usually held on lease from he owner, who is often a distiller or a rewer, and the ordinary form of such a ase contains a set of rigid covenants which ) not give the lessee much of a fighting ance of his life nowadays. But if the laintiff in the recent case of "Wootton varifield Brewery Co." had succeeded, the t of every similar lessee would have been orse than ever. The deed was dated in 1909. te term was seven years, and one covenant covided that the lessees should insure the cause itself in the sum of £650 against loss forfeiture, such sum in that event to to the lessor, the plaintiff. The lessees. e defendants, had insured against loss rough any act of theirs, but not against to well-known risk of what is called "re potential, sell-

A BIRMINGHAM ARCHITECT FOUND DROWNED. In Brainingham Covicorement M. Isaac Braziley he dean impost at the Viscori Cores in Wednesday into the circumstates of the death of Frederic John Gillarest 54, an architect and surveyor, of 79, Vicarac Read, Smethwick, who was round cook in the canal, near Garrison Lane on the provious in imag. Miss Florence Ellen Gillate de eased's sister, with whom he lived, said his was in very good health. He had never to each do his his. He left home on the previous inversality to go to the office, and she is directly away from home for some days at a time, so that at first she was not specially analysis. He periodically gave way to drink, but had been a testotaler for seven or eight months. Sometimes when he met a few friends he had a little too much to drink. The decased's cerk, George Randle, said Mr. Gill came to the office on Thursday morning. He left about 11.3 to keep, witness believed, an appointment. He did not return. The body was discovered in the canal at 7.15 in the morning by two men who were walking along the towing-path about sixty yards from the Garrison Lane bridge. George Dallow said morranz by two men who were walking along the towing-path about sixty yards from the Garrison Lane bridge. George Dallow said on Friday evening, about 9.15, he noticed a man walking up the lane in the direction of the canal. He seemed very much the worse for drink. The towing path there was often used by people as a short cut to get to Watery Lane. He believed the person he saw was the deceased. His dress appeared the same, as well as his general appearance. In reply to Mr. Sidney Vernon, who represented the relatives, a police witness said the path was a dangerous place for a man "who was not quite steady." a pence with mass and the pain was a dargeton place for a man, "who was not quite steady," especially as Friday night was very fee ey. A doct a who examined the bed: said it had been in the water several days. Death was due to drowning. The pury returned a verdict of "Found drowned."

Judgment was not entered pending arguments as to the legal L. Sility of the defendants.

AN ARBITRATION AT BOULTHAM. At the last meeting of the Branston Rural District Council a committee reported the result of the arbitration as to the charges under the contract for the sewerage of Boultham made by the contract for the sewerage of Boultham made by the contract for the sewerage of Boultham made by the contract for Mr. Smith. It was reported that a bill of £21 for extras was sent in by Mr. Swith, and obsertions were made by the committee. Mr. Smith withdrew the account rad sent in another for £115. Eventually the only the order of the matter to an arbitration. M. Joseph C. Joseph Shenford, who awarded £115- that and object of Mr. Smith to pay the set £2.

BUNGALOWS AND BUILDING BY-LAWS Same Sheem of Stour Street Kirk dale and of Scalark From Moreton, was a not one of defere the Birkenhead county pasters on Threshy for setting up a tempor dale and district the Birkenhead county provides on There in Birkenhead county provides on There is for setting up a temporal to readdly at Moneton contrary to the wistors of the Public Health Acts Amend with Act. Mr. W. Greaves Lord, for the William Radal District Council said this was reself the well-known being alow cases, and the where a barefreed attempt had been read to get round not mency by laws, but the Lytis of P. Sament On March 20 there are Moneton statem a bingulow in the Lytis of P. Sament On March 20 there are Moneton statem a bingulow in the feet of the county of the foregalew to the feet there are very the form a wag zon. Mr. Short there are very the the Council, what to the feet of the was allowing another being alow to the feet of the was allowing another being alow.

name of the owner. Replies were given denying the electron of the bangalow, but it was found out later that the owner was the defendant. Notice was then given to Sheen that he had recently ejected a building contrary he had recently ejected a building contrary to the Public Health Act. A reply was then received, not from Sheen, but from the solicitors to Mr. Kerr, the owner, stating that the building had been ejected on Scabank Farm, but saying that the caravan there could be inspected by the Council in Birkenhead if the Council were prepared to pay the cost of the necessary horses. The building (continued the necessary horses. The building (continued coansel) had a span roof, sponting, and gutters, a stove which was built out over the end of a stove which was built out over the end of the waggon with a chimney, and at the other end there was a down spout which seemed to be much more suited to a permanent dwelling. The building had a garden in which were be much more suited to a permanent dwelling. The building had a garden in which were growing vegetables, and, in fact, there were all the amenities of a country dwelling. Mr. Shanen, surveyor to the Council, gave evidence as to the character of the structure, which, he said, was intended to be used as a bungalow and not as a caravan. For the defence, Mr. Dean argued first on the legal point that this structure was not a temporary building. They had had three summonses issued against them, one of which was for creeting a temporary building, and another for erecting a new building. It would be quite clear that if this structure was a new building it was not (under a legal decision) a temporary building. He objected to these alternative summonses. Briefly his point was that this structure was neither a new building nor a temporary one. It was purely and solely a caravan. He also raised the point that the Council had not given the necessary notice structure was neither a new building nor a temporary one. It was purely and solely a caravan. He also raised the point that the Conneil had not given the necessary notice to the owner as to their intention to take proceedings, and therefore the case could not succeed against him. The Wirral Rural Courcil had tried to get at the bungaiow owners on the ground of public health, and had failed. They had lost two cases in the High Court, and now came before the magistrates in order to secure a more favourable decision. The caravan in question complied with the law. It was a caravan and not a permanent building. Mrs. Sheen, wife of the defendant, said she always regarded the structure as a caravan, and not as a bungallow. Her husband had made an application to effect a bungalow, but permission was refused. Mr. A Keir, owner of the land at Moreton, said the caravan had been moved from one place to another to prove that it was mainle. The magistrates decided to convict. The structure was a temporary building within the meaning of the Act. They in flict d a fine of 20s and defendant must also pay five guineas costs. The bonch expressed the hope that some arrungement would be arrived at the avoid further highien concerning the bungalows.

THE BUILDERS CLAIM AGAINST EXECUTORS OF LORD BURTON—In the official Receiver's Court, on Monday, after an adjournment from the 15th inst., Mr. Edward Pollock again had before him the action of Messrs, Willcock and Co., builders, Wolverhampton, to recover from the executors under the will of the late Lord Burton the sum of £3.785, balance of the cost of building St. Chad's Church at Horninglow, Burton-on-Trent, for the late Lord Burton, the contract price being £19.559, to which a certain amount was added for extras in the claim by the plainprice being £19,559, to which a certain amount was added for extras in the claim by the plaintiffs. The defendants in the action were Harriet Georgina, Downger Lady Burton, Rangemore, Burton-on-Trent; Mr. John Arthur James, Grafton Street, London; Mr. John Gretton, M.P. Emismore Gardens, London, and Mr. John Lambuck, Stanton Road, Burton-on-Trent, joint executors under the will of the lane Lord Burton Mr. A. A. Hudson K.C., with Mr. Disturnal, K.C., and Mr. Drysdale, appeared for the idaintiffs, and Mr. Leslies of the K.C. with Mr. Gibbous and Mr. Beth me, was for the defendants. We reported the earlier hearings of the action in our last Both me, was for the defendants. We reported the earlier hearings of the action in our last issue, p. 45%. The adjournment took place on the question of the defendants being allowed to amend their pleadings in regard to an allogation that work said to have been done as extrashed not been done. The Referee decided te allow the amendment to be made on certain conditions as to pryment of costs, and defendants' counsel being unable to accept the condition with a consultation with the executors the case stead adjourned. On the reassent bling of the court, a consultation took place between the leading counsel in the case, and dimately they acceeded in arriving at a between the leading counsel in the case, and drin ately they succeeded in arriving at re-ordement of the action. The terms were con-semicated to the Official Referee in his privat-tion, but no announcement was made in

ARCHITECTURAL ASSOCIATION RED CROSS VOLUNTARY AID DETACH MENT. A second series of lectures on first aid is being arranged in connection with the above detachment. The course will consist of six lectures, and will be held at the Architectural Association on Monday evenings, commencing on November 1, at 6 p.m. The detachment is now supplying orderlies The detachment is now supporting for various London hospitals, and further property needed. The work is recruits are nrgently needed. purely voluntary and part time only. Full particulars can be obtained from the Quartermaster, at 18, Tufton Street, Westminster,

BIRMINGHAM ARCHÆOLOGICAL SOCIETY.—Mr. J. A. Cossins presided on Wednesday night at the Midland Institute at the annual meeting of the Birmingham Archaeological Society. The report, which was approved, stated that the excavations The report, which at Uriconium had been discontinued for the present. The officers of the society were re-elected as follows:—President, Mr. J. A. Cossins; hon. secretary, Mr. Howard S. Pearson; hon. librarian, Mr. Francis B. Andrews, A.R.I.B.A.,; hon, excursion secretaries, Messrs, Phillip B. Chatwin, F.R.I.B.A., and John Humphreys, Dr. Christopher Martin was elected on the committee in the place of Mr. W. Hobart Bird.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—At a meeting of the council of the Royal Institute of British Architects held on Monday, the 18th inst., it was decided, owing to the war and the exigencies of the lighting regulations, to cancel the programme of papers and to sus pend altogether the evening meetings which had been arranged for next session. The president, however, will deliver the opening address on November 1 as already an-nounced, but the meeting will be held at three o'clock in the afternoon instead of eight in the evening. General meetings will also be held during the session for the election of members and the transaction of the usual business of the Institute, the meetings to take place at three in the afternoon. At the meeting of November 1, the portrait of Mr. Reginald Blomfield, R.A., Past President, painted by Mr. J. J. Shannon, R.A., will be formally presented to the insulute. It has also been decided that the hours during which the Institute Library will be open shall until further notice, he from 10 a.m. till 6 p.m. instead of from 10 till 8 as hitherto.

TOWN BUILDINGS IN ENGLAND AND SCOTLAND."—The Archdeacon of Elv. Dr. William Cunningham, lectured to the members of the Royal Philosophical Society, Glasgow, on Wednesday night, on "Town Buildings in England and Scotland." He said that when he compared institutions of Scotland with those of England he came to the conclusion that, though there were many superficial resemblances, there were real differences between them. The main result were that sult was that, whereas in England there had been a great deal of influence from the Mediterranean lands in the town buildings both in Mediaval times and the Renaissance, in Scotland the influence was largely derived from Flanlers. The two different types both in England and Scotland were the monastic and the castle, which types represented the different reasons for a considersented the uniferent reasons for a considerable population gathering together. Aided by hintern slid's, Archdeacon Cunningham explained the contrast between the towns and the effect which the affairs of primitive times had upon their organisation.

The Bristol and District branch of the Auctioneers and Estate Agents' Institute of the United Kingdom held its fifth annual meeting at Bridgwater on Friday last. The president for the year is Mr. H. Mundy, Mr. John E. Pritchard being the honorary treasurer, and Mr. E. A. Young the honorary secretary. The meeting considered the question of offering Institute prizes for the 1916 examinations. A special meeting followed the general meeting to make further arrangements for the conduct of sales for raising funds for the purchase of the "Star and Garter."

AFTER FORTY YEARS: A RETROSPECT

Sir,-Forty years have passed since I first contributed to these pages, and the anniver-sary, with its many nappy recollections, suggests a contrast between the conditions or today and October, 1875, in the architectural

and building world.

At that period the Gothic revival had nearly spent itself, most of our cathedrals and churches had been restored, and rising architeets were following the lead set by Norman Shaw, J. J. Stevenson, and other students of Dutch art of the beginning of the eighteenth century, and were endeavouring to revive the style of Queen Anne and the use of cut and moulded red brackwork. It was a time of commercial prosperity, and, therefore, of much building activity. Many towns were providing themselves with larger and more ambitious municipal offices, and numerous poard schools were in course of erection, both n rural and urban areas. Two important neasures aiming at the advance of sanitation and the solution of the housing problem—the 'ublic Health Act and the Artisans' Dwelling Act—had just been passed, and had a marked affuence on public opinion. Under the timulus of the obvious growing prosperity of he middle classes, mirest showed itself among he working-class and labouring population the demanded their rightful share in the ad-ancing scale of domestic comfort. Many imortant buildings were in progress. George idmund Street's Law Courts were beginning show themselves above the ground level of he vast area cleared of sluns, the most rward portion being the red-lirick block using Bell Yard and the base of the clock over at right angles to old Temple Bar. hich still obstructed the Strand. The ational Gallery was being enlarged in an rofessor E. M. Barry's plans. Sir Gilbert out was putting the finishing touches to the lbert Memorial, hard by Captain Fowke was monstrating how needless it was to commison an architect when a concert room of the mensions of the Albert Hall was contemated, and the Brompton boilers were being panded. Alfred Waterhouse was showing e capabilities of red-brick and terracotta the Natural History Museum, just being arted, and was bringing to completion the win Hall and Owens College at Manchester. ınl and Bickerdike were building for New-un Hall Christ Church, Westminster Bridge lad, Lockwood and Mawson had in hand for Joseph Parker the City Temple, and rring and Son the Memorial Hall in Far rigdor Street. Buildings of another class ver John Bedforough's Westminster Aqua m, Horace Jones's Markets at Smithfield at Billingsgate, and the reconstruction of the Alexandra Palace after its destruction fire, all then in progress. Architects were having a busy time, and

ts was beginning to reflect itself in their o ces and in the professional societies. gat influx of the ambitious sons of builders al tradesmen into offices, where their pents hoped that they would have easy h rs and an early competency, was beginh rs and an early competency, was beginn g to awaken concern among the elder membe of the profession, who, while gladly acceting premiums, gave less personal attentic to pupils, and inquired with an appearare of anxiety where all these building archi-

tes would find bread-and-butter.

he membership of the Royal Institute of B ish Architects was then comparatively sull, and, as many leading members of the pression preferred to remain outside, its influe was not great. In October, 1875, the ro-consisted of 298 Fellows, 290 Associates, 12Honorary Fellows, and 9 "contributing mabers," in all 609, whereas at the date of st June's report the membership showed anaggregate of 4.641, of whom 857 were Ferws, 1,713 Associates, 54 Honorary Assoanaggregate of 4.641, of whom 857 were Fews, 1.713 Associates, 54 Honorary Associates, and 2.017 Licentiates. At the date refer to Sir Gilbert Scott was serving for a thil year as President, with Messrs, Henry Cuey, George Vulliamy, and John Wishcorl (afterwards president) as vice predents, and F. P. Cockerell was the honsectary. C. L. Eastlake, the secretary aftewards pitchforked by Lord Beaconsheld

destinguing hims in type endeavours at amper the Press The publication of the amumic report was probabled, and attemptioned that address efforts prompt, appared to presidential address efforts prompt.

At the Vislout

At the Architectural Association, which a met at 9, Conduit Street, the voluntary system of classes was being carried on with greaenergy and success, the membership ver rapidly accessing, and proposals that the vizotous younger rody should be absorbed ! the Institute were rejected with spirit. Mi I Salmon Quilter, an architect with a good City practice, had succeeded G. H. Birch, tre City practice, had succeeded G. H. Buch, the order-lessologist, as president, with H. Cowe Boyes (a son of Anak in stature and proper tromately well built) and H. L. Florence, a vice presidents, and E. G. Hayes, as bon secretary, all three afterwards in turn occupied the chair, and of them all only Mr. Florence survives. ence survives. An energetic ex others member of committee, qualified for office as the teacher of a class, was one Aston Webin, whence year undertock the duties of hone seem tary, in succession was called to the offices of vice president and president, and then serve in turn the like positions at the Institute and as the most eminent architect of the day received high honours from three Sovere.21 of England. It is interesting to note that two of the young mon elected as members or the opening night of that session of the asso ciation were after aids elected president.
G. H. Fellowes Prynne and Leonard A. 8
Stokes and that the latter immediately followed Sir Aston Webb in the Institute chair At that time the total membership of the

At that time the total membership of the Association was little over 600, against a total at the date of the last annual report of 1,485. The Britisha News then, as always throughout its long career, was served by at able band of contributors. Many of these have passed away, and many more have rein forced the ranks. For the moment you, Sir. have passed away, and many more have from forced the ranks. For the moment you, Sir, whose service of fifty-two years dates back farthest of all of us, must miss some of the help so treely rendered, which, as you have neep so receiv reintered, which, as you have often said, has made the PULDING NEW what it is. When the struggle in which is many of us are manually bearing their par-is finished, may it be yours and ours to rejoice together in the hour of victory, and may those that come after be able to say, "another indicate the finance of the first peaks," throughout them our art flourished, and the BUIDIN NEWS and all its friends and helpers with it Fistri MOR. - Lam, etc..

WATER SUPPLY AND SANITARY MATTERS.

WATER SUPPLY AND SANITARY MATTERS.

ABERDEEN WATER BILL. The Parlia mentary Commission appointed to deal with Provisional Orders in Scotland opened an in quiry at Aberdeen on Friday into the application by the conjugation for power to take an additional 3,000,000 gallons of water per day from the River Dee to meet the growing demands of the city, and to make provision for the erection of works for liming and storage of the water, in order to ensure the proper preservation of its purity. The cost of the scheme is estimated at £450,000. The apposition to the Bill is at the instance of the Dee District Fishery Board. Sir Thomas Burnett, Bart, of Leys, Sir Victor Mackenzie, Bart, of Glenmuck, and other proprietors of salmon fishing on the river, the principal objection being the the proposed abstraction of 3,000,000 gallonadditional per day would seriously and injuriously affect the salmon tishings, and they ask the tribunal to make provision in the Order for compensation water being sopplied. The inquiry is proceeding -

An atenot is proposal from the Propositional Classes Witt Relief Court Force docussed by the London Education Commute. on Wednesday. The Council asset that, with a view to finding work for artists in distress through the war, the walls of vertain Council schools, to be substed by the Council. might be decorated with trozes and paners, the decorations to remain the property of the Conneil. It was proposed that the subjects and designs should be supercooled by an expert committee of artists, and submitted for approval to the Council before heard carried out. In order that the work of the schools might not be interfered with the feature and many, want he exceed a way. might be decorated with traces and papers, schools might not be interfered with the friezes and panels would be executed away from the school buildings, and fined during the school vacations. The Commonweal not be put to any expense in the matter. Mr. O. E. Warbing proposed that the offer should be accepted. Mr. Gantrey right in a the decorations should not be closs in build modern. For example, one of the closs in build modern. For example, one of the closs of being printed for his old school. Mr. Warbing and that he thought Mr. Gantrey's order to worthy of cateful consideration, and remove modern of cateful consideration, and the undertook to bring it before the German Purposes Sub Committee. The metion was mark monely approved. monsly approved

A Yorkshire correspondent of the March A Torkshire correspondent of the Marcine to Foundation writes: Sphegnum moss women used as a builder's smalley to give an agay name to a beautiful thing. All along the border of the West Ridling the old houses are toofed with grey stone slates. Mess was collected and forced into the joints of the slates. As the rain ran down the root the most absorbed the moisture, and the swollan most made a water tight joint. Besides serving this purpose, the rich green, velvety lines of most bejewel the grey slates and make a pleasing picture worthy of being run troduced by the walking of the control of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich transfer of the rich tra architect of our garden caties. The old loulders architect of our garden cities. The old builders took especial pade in their roofs, "continues the correspondent," and added another too he of decoration that is worth following. Their finstone chimneys and ridge stones were well pointed, and over each course of line a bread band of whitewash or even white paint was added, so that the pointing of the channeys and the ridge is plainly visible from a distance It is called scam pointing, and the black and white effect is most charming. The house-proud farmer has the white seams renoved every spring. I am told that the custom is

Sand is mixed with nearly all aggregates. remarks a writer in the Contract Re ad et Toronto, for the purpose of filling the vo. 1s. Toronto, for the purpose of high the volus, If enough sand is added to fill up the volus between the particles of aggregate added to fill the interstices between the seek, a much smaller quantity of coment is recief than if the sand be emitted, while at the same time a stronger, heavier, and more inversions concerts is identical. Since of me pervious concrete is obtained. Sand of un-form size tends to weaken the concrete, as also very fine sand. Unaformity in size more s a greater proportion of voids, and either a larger quantity of cement has to be used to fill up the interstices or some remain annily I to weaken the strength of the concrete.

The old church of St. Paul's, Herfax, N.S., is a standing testamony to the duradiaty of timber. This ancient pile, which dates from 1750, is constructed of pine and cake with was brought from Boston, M.S., which it these early days was part of the British almplie. It is the mother chard of the Charlington England in America, and the front time I The West custs. Allow of Canada, "The svery rich offs treed issue a tions. It was bind on the Parabour 1750 at the expense of the Crown, by a respective ment. The interior of the charle built of ment. The interior of the charle built of great great wealth of noural table ts of great gristerical interest than can probably The old church of St. Paul's, Halfax, N.S. of great whistorical interest than an probably be found in any other church on that side the Atlantic.

s at trac intervals were made on y 'st., aeroplines, which threw rls on the town, some of them in y. One bomb struck the roof of the of the Scalzi, bringing down the cell of the Scalzi, bringing down the cell of nothing day precious painting by contained a precious painting by it. Another incendary bomb fell in the letter See Marce, without doing any wage. It is course of a third attack, in adden afterwards, three bombs were throot, the it was two of which did no damage, and there we do dropped in the courty rid of a limboures, set fire to a pile of we of Monday morning there was a fresh attack, too. Vistr an incombanes dropping soy rall Mendaly merring there was a riest, attack, the Austrian acroplanes dropping several ends at refer a re. Three people were slightly at h. The insterial damage done was very ght. It is regarded as a real miracle that bomb should have fallen in the Plazza San with ut doing any harm.

1 The foundation stone of the new church of St. Saviour's, Great Moor, Stockport, has been formally laid. The architect is Mr. R. B. Preston, of Manchester, and the contractors are Messrs, R. Rathbone and Sons, of Atherton.

# 10 CORRESPONDENTS

We control ourselves responsible for the opinions of articles pricing All communications should be drawn up as briefly as possible, as there are many communications up in the space allotted to correspondents.

e rrespondents.

It is part cularly requested that all drawings and all communications respecting illustrations or literary matter, books for review, etc., should be addressed to the Editor of the Bunding News, Effingham House, I. Arundel Street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' risks, and the Editor will not undertake to pay for, or be hable for, unsought contributions.

for, unsought contributions.

\*\*\*Prawings of selected competition designs, important public and private buildings, details of old and now work, and good sketches are always welcome, and for such no charge is made for insertion Of more commonplace subjects, small churches chapels, houses, etc. we have usually far more sent than we can insert, but are glad to do so when space perforts, on mutually advantageous terms, which may be ascertained on application.

When for more us with downess or photographs.

When favouring us with drawings or photographs architects are asked kindly to state how long the building has been steeted. It does neither them nor us much used to illustrate buildings which have been sline time excuted, except under special circumstances.

Telephone: Gerrard 1291. Telegrams: "Timeserver, Estrand, London."

shown in the straight, strong lines on our plan, was shifted to a position indicated approximately by the dotted lines. First impressions, as we have said, may be de-We made a rough sketch from memory (Fig. 2) of something we witnessed in one of the districts attacked, and put the double-headed arrow as an example and illustration of that which we thought might be preserved after pulling down the wrecked brick gable. To refresh our memory we again visited the spot, but sent to be been the premises. We think, failed to locate the premises. however, that it was the left hand building shown in Fig. 3, and, if so, those who more carefully examined the structure no doubt found the whole front un stable, and dealt with it and the adjoining premises in the drastic manner indieated. Had we originally taken a lateral view of these premises, in addition to merely viewing from the front, we should

juries, but the study of the results shock evidenced to the eye are valuable as giving a clue to hidden flaws in struc-Both the damage shown in Fig. 3. Inre. and Fig. 4 must be considered the direct effect of high explosive, as distinct from injury by shell contents and debris.

As bearing upon direct shock, the case As bearing upon direct shock, the case of Fig. 5 is instructive. The sketch as are all given herewith approximates more or less to the actual occurrence and premises. The upper parts of the building shown in Fig. 5 were oblibut the lower story has a concrete floor over. As our diagram indicates, this substantial horizontal stratum assisted to priserve the lower part of the building. The whole of the brickwork above, the concrete floor not actually blown down by the explosion needed to be clear d away. Where there exists such a strong floor as C, Fig. 5, some distance below a roof, and specially where there are several superimposed floors, we may look for sound work below. Where a bomb passes through even a slight roof, this obstruct on seems sufficient to ensure letonation. The

instant of actual explosion apparently following very rapidly, the upper part of a building seems to suffer most from shock, and any such solid floor, as C. Fig. 5, has chiefly to r sist the impact of shell contents and debris. Since it seems to be nearness to actual point of explosion that causes solid material and building construction to suffer from sheen. such as is lik ly to produce structural insoundness, these considerations may be worth bearing in mind when proceeding to survey damaged premises. Where, as in the case of an exterior explosion, a few yards from a strong modern (milding the nearest point of attack for the explosion wave is overhorne by a vast dead weight of material, this seems to enable the part immediately attack d to hold up soully and homogeneously against concassion and vibration. We here, again, alvator the opinion with reserve. It is not easy to conceiv show some of the broken and splin-

talled upon to survey wiccked buildings nd to specify and supervise repairs will o well to study carefully the effects of igh explosive upon material and strucure. Mere repair is comparatively easy, ut the subtle and hidden effects of shock i explosion on the stability of structure eeds care, otherwise reinstalements may e made upon unsound substructure.

Of the two kinds of repair work renired-internal and external-as a rule, ie one is the result of explosion actually a the premises, and the other is necessiited by externally falling bombs, as in ie street. Strong modern buildingsheir main organic parts, at any rate-mem well to withstand shock; but it ill be judicious to assume this with To discover damage not at once intion. ident, and not obvious to the eye, should ying premises for repair. We may, of curse, well study the effects of obvious cmage. Thus Fig. 1 affords a good cample of the force of explosion—a scong and heavy iron railing plinth bodily seered, at about ground level, from the the first aim of the architect in sur-

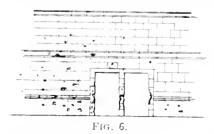

igh su stanti i, outldings him-I is away from the actual point Sec. are hable to convert sound he kwite and masonry into unreliable structure principe fail later if we again plas meany loads upon it. The main ten-A - 1 migh explosive must be to breeze end, as in enckwork. In most instances you may would suffer. Given plumbnoss and squareness, on test, apparently indi-cating sandness, the signs of hidden were so nery possibly be bost revealed in

affections at joints. Except in special circumstances, foundations are unlikely to be disturbed; but in the worst cas's everything will have to be cleared away to ground-line and the premises

wholly rebuilt.

Shell contents, as distinct from the shock of the explosion wave, splinter and disfigure stone and granite façades and pullerise bricks. To appreciate the effect of projectile emanations from exploded bombs, we must give credence to the statement that the shrapnel contents of these shells are of chilled iron. It was represcated to us on visiting the site of the damaged building illustrated last week that such chilled metal was found on the spot. This being so, it is not a matter of surplies that soft iron, such as railings. is cut through so cleanly and that the injury to bressed stone and granite indicates so violent an impact. How to repair the fronts of the many beautiful buildings disfigured in this way is one of the problems presented to the architect. Figs 6 and 7 fairly represent the class of injury to be repaired. Much detail of the whole building is beyond repair in the sense that the whole feature requires to be reconstructed. One side of the arch pier resolutioner de cone sone of me aren pier, column und entribluture, in diagram Fig. 7 might as well be rebuilt as re-prired to parchwork. It is eds at least ten new worked stones, and we should call these a onite mild example of many acture commences. In damaged brickwork the inputed bricks will need to be cut our and the bright new patchwork here as I there accepted. In many instances,

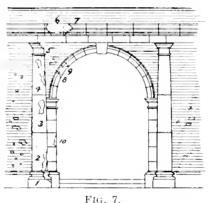

The these notably soft-gauged work, are pulserised, and need entire reinstatement, even should the main walling prove sound

Insurance worth the name should insure the exact replacement of things existing prior the rank and some very expensive builders work is foreshadowed. too probaidy, the uninsured premises will a pat liwork repair at the best. stores preced in and at times holes made good in sement but our ruate public and up tant private buildings carnot

stone work, must be considered one of the beauties of masonry, and, indeed, one of the most effective and expressive attributes of architecture. If, then, having an ornate façade, largely dependent upon stone jointing for its effect, we piece in a patchwork repair, we are spoiling its beauty. Such a necessity should certainly be obviated by insurance. Then, again, in the case of solid stone and granite fronts, constructed, as is often the case, of facing material right back to the steel stanchions—it may be to a depth of 20 in. reinstating, say, a 4-in, facing is not "making good" as before the aerial attack. An effective insurance claim will no doubt include both structural correspondence and architectural concord.

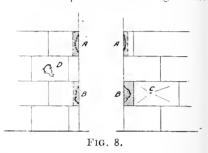

If Fig. 8 represents the two elevational views of the angle of an injured stonefronted building, we may certainly piece-in, as at A and B, and the repair will be constructionally sound. But, as we have said, the beauty of regular-coursed masonry resides in its jointing, and this effect has been in part ruined by the discordant joints introduced by the pieced repair. Small injuries, of a fraction of an inch in depth, such as C, could no doubt be faced off as indicated; but to make good as before the damages at A and B necessitates drawing the damaged stones and replacing with blocks of similar size; and if D be a deep defacement in granite, it seems a little bit of a problem to

remove D and maintain sharp arrises on the surrounding blocks. Constructionally, perhaps, a thin facing, in place of deep stones, would leave the structure practically as good as before, but it would certainly not be the state of things existent before the damage. Fig. 9 is an elevation of stone or granite work, of a solid order of workmanship, backing right on to the stanchions of the steel-framed construction. We may face back, say, 4 in. for repair to injury B, but, constructionally, the work cannot be compared with that effected by drawing a stone, as at A. No doubt many compromises will be made by insurers, but it is plain that a deeply injured building can only be effectually repaired by with-drawnl of damaged stones and replacement by blocks of similar size, similarly dressed. From "patriotic" motives, at a time when money is urgently needed for national purposes, we may be persuaded by insurance offices that 4-in, replacement is practically as good and substantial a repair as a new stone 20 in. dep, but we shall remain incredulous and unsatisfied.

A general clearance and a start de noro em absolutely necessary in a great number of cases, repair being impossible The peculiar partial effect of high ex plosive is, however, a circumstance indicuting the possibility of saving much that and in this market. Jointing, in Cotherwise one would consider, viewing the may be repaired,

destruction wrought in the immediately adjoining parts, certain to be rendered quite unsound. We have recently seen some hollow brick walls the subject of explosion not many yards distant. The explosion certainly pulverised the outer 4½-in, casing, but the backing appeared sound, the galvanised iron bonding ties standing out at sharp right angle, as originally set by the bricklayer. One would have expected the backing to have

been blown in, if high explosive did not act in such curiously inconsistent fashion. Possibly the weakest part yields, and, so yielding, relieves the stress on another part; so that where a front wall may be blown out, the back wall may stand, and the general relief by blown-off roof, flying quarter partitions, and the throwing down of the front, may leave party walls sound. It will, however, be always we'l to view the whole with suspicion. from high explosive is just that kind of stress that bricks and mortar and comented masonry are least suited to withstand. Earthquake tremor is far less trying, and it has been demonstrated that well-tied steel-frame construction well resists seismic disturbance. Appearance, in estimating necessity of repair, should go for nothing. We have noted a granite pilaster to a shop front, greatly injured by impact from shell burst and debris thrown up by the explosion. Some 3 ft. of one arris was deeply scarred, and about 2 ft. on the other side injured, the pilaster being about 4 in, thick. To all outward appearance the central part of the pilaster i.e., between the two points the subject of heavy impacting force—was as good as ever; but we doubt not that it would, on a slight blow, be found absolutely void of cohesion and strength.

Timber, as a rule, seems to withstand well concussive shock and vibration—no doubt owing to its semi-elastic nature. Whole roof slopes may be seen with rafters intact, blown clear of natural

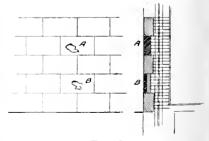

FIG. 9.

support. Window frames, too, seem to hold up remarkably well, as a rule, affording little hold to the explosion wave. and, moreover, possibly saved to some extent by the yielding of the glass. Doors suffer more damage than windows, and are blown forcibly away from frames and splintered. Taking, as it were, the place of glass, they offer a wide area of resistance, conducive to their destruction. Doors and joinery of like nature appear to need complete reinstatement, where often the apparently fragile window sashes

# THE ROVAL SOCIETY OF PAINTERS 1N WATER COLOURS.

The winter exhibition—the 165th Royal Society of Painters in Water Colours is a good one. The group of twenty works by the late Comm. Walter Crane (173 192) alone is well worth the admission charge. including as it does several of the deceased artist's best efforts and some of his earliest. The majority are Italian scenes, and all sympathetically rendered, the architectural subjects, "The Arch of Construction" (177) and the "Arch of Titus" (182), both at Rome, will most interest our own readers.

Mr. Alfred Parsons, R.A., the President, sends four subjects—the Old Arbutus in South Wales" (5), "Lilies and Loosestrife" (9), "The Chinney Campanula" (28), and Cardiff" (228), the floral beauties of the first three being done full justice to. Mr. Laonel Smythe, R. V., has an able and pleasing rendering of Young Gleaner (4). Mr. Edwin Al Young Glenner" (4). Mr. Edwin Alexander, A.R.S.A., successfully devotes two contributions to birds Woodcock" (5) and "Bullfinches" (49); his third is "The Desert—Egypt" (71). The majority of Su Ernest A. Waterlow's contributions are Sussex scenes, but the eighth is a good view of "The Ogmore Valley, N. Wales" (135). Mr. Reginald Barrett sinds a well-drawn "Holy Water Basin, from Siena Cuthe-"Holy Water Basin, from Siener Cuth-dral" (17), a charming "Evening Glow, Venice" (51), an "Entrance of the Grand Venice" (51), an "Entrance of the Grand Canal, Venice" (80), and The Taj Mahal, from Agra Fort" (223), and A Corner of a Venetian Palace" (229). Mr. F. Cayley Robinson is represented by his excellent design for a mural decoration for the Dublin Art Gallery, "The Landing of St. Patrick in Ireland" (84), and an "Autumn Evening in London" (231).

Mr. T. M. Rooke contribut's some good Mr. T. M. Rooke contributes some good architectural studies, "The Towers of All Souls, Oxford" (10), "The Choir, Southwark Cathedral" (102), "The Porch, Malmesbury Abbey" (108), "The Temple Church, London" (157), and Westminster Abbey" (197). Mr. C. Napier Henry, R.A., may be well congratulated on "A Patrol Boat" (37), with its stormy sea Very good also are "Wind on Shore" Very good also are 'Wind on Shore' (92), "On Wutch' (98), "A Muckerel Boat.—The Run Home" (118), "Here She Comes" (146), and "The Torpedo Boat." (212). Mr. S. J. Lamorua Birch is to the fore with some of his always welcome West Country scenes. There are The Junction of the Plym and Meavy, Shaugh Bridge, Devon'' (36), "On Wigford Down, near Meavy'' (56), "The Sketcher'' (91), The Rocky Plym'' (193), and "A Devonshire oftage on the Tamar'' (231), Mrs. Allingham sends four welcome floral pur-ares—"Roses in a Venetian Garden" 46), "Bluebells" (82), "In a Surrey 46), "Bluebells" (82), "In a Surrey Farden" (86), and a "Bit of Garden Border October" (166). Mr. Robert Anring Bell, A.R.A., has only one subject in the walls, "A Flight of Fairies" (136). fascinating group of ethereal visitors. Ir. Byam Shaw is fully up to his standard ith "The Abbot's Niece" (22), "Illustration to the Boylood of Akbar" (165), and ion to the Boylood of Akbar. In Memory of Private Maurice Godfrey, 3rd County of London Regiment " (202). Liss Eleanor Fortescue Brickdale embodies Il the title suggests in "The Enchanted (100). Her four oth r contribuons are "Evening" (109), a Portrait f Mrs. Noel Buxton" (113). The First wen of Payeocks" (131), and "June is · (235).

Lende b Bridge (218) is perhaps the best of his their co-contributions. Of Soutish scene by the test examples come naturally from Mr. D. A. Cameron, A.R.A. A.R.S.A. They are the Anle of Porth (45). Inverse hy (50). Uplands in Montenth (147). Spring (211). Balquindae i (232), and The Stack (250) Mr. J. C. Dollman's a meeting (211). Balquindada Stack (25m vi. tack (250) Mr. J. C. Dollman's Korper's Cottage (59) is excellent, and (25h) VI.,

Kyper's College (59) is excellent, and so are his Sussex Summer (116).

Gorse'' (122), and A Sussex Term'' (220). Mr. Hughes Stanton, A R.A. sends A Suarry Evening'' (41), and a pleasant view of Hindherd, Looking Towards Haslanere (61).

Among others which will deservedly be noted are Mrs. Laura Knight's "The Two Fishers" (67) and her—Bathing From the Supway" (114). Mr. W. Rusself Flint's Sipway (114). Mr. W. Russen runes. Three Dams is (130). Mr. Churles Sim's Bathers (127). Mr. Henry Henry shulls 'His First Steps' (148), and Mr. J. W. North's two subjects, a Water Mill J. W. North's two subjects. in South Wales" (164) and When Houses Were Built Round the Chimney farmhouse.

# ROYAL INSTITUTE OF BRITISH ARCHITECTS.

>-00

The eighty stood Essission of the Royal Institute of British Architects was held on Monday afternoon, on the western, or smaller gallery, at 9, Conduit Street, W. Arnong those present were three Past Presi denes, 8 r Aston Webb, R.A., Mr Regual I Blomfield, and Mr Leonard Stokes, and the visitors included several ladies.

# V 1086 OBILITARY LIST.

A sombre note was struck at the outset of the proceedings by the announcements made by Wr. E. Gny Dawber, hon, secretary, who remarked that it was his said duty to record the losses which the Institute had suffered since their last meeting. These losses were except onally severe numbering no tower than tweaty members, including four Fellows, five Associates, eight Licentiates, and three Students, Name among them were young men, who came forward to the call of ducy to fight in defence of their country, and had perished on the battlefield. Their names were: Lance-Corporal Alexander Wingate, 9th Battahon, Highland Light Iorantry; Captain George Prigram Bowie, 5th Battalion, First Canadian Contingent: Charles Henry Rowed Heman Contingent: Chirles Henry Rowed Henran Royal Naval Daysson a son of their steemed Fellow, Mr. Charles Henrant; Henry Charles Pullen, Rifle Brigade; 8nh Laentenant Aldersly Dicken, Royal Naval Volunteer Reserve all the above were Licential 8: Private Charles Joseph New bery, 5rd Royal Fus, hers; Second Leutemant James Bernard M Jurd Walch, 2nd Quen's Royal West Sarrey Regiment; Edmund George Dawson Fromunt; and Capta in Frederick Henry Lawson, 5th Battalion, Nor thumberland Fusibers, the last four namel having been Students. He moved that there he recorded on the minutes an expression of the Institute's deepest surrow at the loss of these gillant young here's, and that noss of these gillant young here's, and that mes-sages of sympathy in Leondolence be con-veyed to the bere's of relatives. The motion was put by the President and was agreed to.

we yell to the belonged builties. The moreovers put by the President and was agreed to. Continuing, We conv Dawber further announced the death of Mr. Gorge Bell, F.I. low, a Past Possilent of the Glasgow Institute of Architects, and a former member of the Dawber and and Mr. Gorge of the RIBA C med, and Mr. George Bertram Bulm : Fe low, Past President of Bertram Buim v. Fe low, Past President of the Lee Is and Yorkshine Architectural Soviety, who had also served on the R.I.B.A Council. With regard to Mr. Ber-tram Bulmer, he had the pleasure to an-nounce that under his will the Architects' Benevolent Soviety, on the expraison of cer-tain life interests, would benefit to the extent

And in addition there is a considerable our from sales of the Arrists We Recet E., hibition, which was opened by her Royal hibition, which was opened by her Royal Highmess Prances Louise in July and re-mained open during Viguet and September. The most important of the Way Committee's schemes for dealing with incomp cyment is the Civic Survey. Throughout the viewe have kept in touch with the Probessional have kept in touch with the Probissional Classes Relief Committee, and this committee has helped architects' families by receiving their wives into the materiary long and assisting in the education of their chadren, It has also organised summer be of cysfer volument to behave a group after the children and has helped in many other ways. In connection with this committee we have undertaken to help in a Christmas Side at the Affect Hall, and a special committee has been formed for this purpose. We shall be glad to receive the names of ladies who are willing to make articles for this sat

# VOLUNTARY REGISTER OF ARCHITECTS

The Selection Committee is now engaged in preparing a voluntary register of architects suitable for inditary, civil, or munitions work. It has been felt that the Government has not been able to make sufficient use of achitects, as the information at its disposal was not sufficiently complete. It will be remembered that early in the war we made, through the Architects' War Committee, a general offer Architects' War Committee, a general offer of service from the whole body of architects. When the war broke out an enormous amount of work suddenly fell on all Government Departments, and more especially in the War Office. Probably on this account our general offer of service did not receive as much at tention as we hoped might have been the case although we have been able to supply several men for responsible positions, but is the offer had been made by me as Chroman of the Architects' War Committee and President of the Royal Institute of British Architects, I thought it well to call at the War Office personally in May last and renew it in greater detail. The suggestions I then made were most courteously received, and I inderwere most conflootsly received, and random-stand have since been circulated to all the commands in the Bu sh Isles, Mr. Stanley Peach, who, with Mr. Munby, has communist indefatigable, and devoted an anomal samount of time to this branch of the activity of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the ties, finds that even now the fitteties, finds that even now the fetres at the disposal of the Government are in the subject and that the only way of which we are held real service is to have names at the afficiency quired may be provided at the latter very much that some controvers, so additionally and the controvers. arisen out of our office of a constant object was, and is, to assist the Green ment by every means in our rower cost night in the way of contraversy said there and a waste of energy.

THE PROFESSIONAL BY 1970A in addition to the time Second alluded to, his been able to the condof a very varied note that the transfer of a very varied note to each each of a very varied note in there are, of course, certain loss where no suitable employment can be read, it d in these cases the A latters Berevolent Society and the A tises General Benevolent Mr. W. J. Wainwright's only work. 'A laid of the Hostel' (145), modestly catagued "A study," is one of the lest things the exhibition. Mr. G. Clausen, R.A., is two good sky studies, "Evening Sky" (215).

Benevolent Society, on the expiration of circular tain life interests, would benefit to the extent of no less than £5,000. He had further to amounce the decease of George Henry Hunt. Graham Nicholas, George Lister Sutcliffers to the committee has held at smeetings at the present of the Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the A tisses General Benevolent Society and the or positions to tide over a

We who are too old for active military service must let them know that we treatise all that we are asking of them. It is easy for us to say "Would I were a young man". I hope we should all how. man — I mope we should all have gone, but none of us can realise the struggle of the man was hesitated to go at first, and is now asked tor what has been well described as " 5-o'clock tor what has been occur in the arounding courage." But the decision course to the for choice is anything to the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the co " But the decision can charger be put off. The time for choice is ver No one ht for his country's service has a right to live at ease and carry on his work motected by those who have not weighed the peas and cons but have seen only me path and have trodden it fearlessly Many of these men have given up promising careers and good positions, and it is unthinkable that, now the need is so great, others should he state to make the same

# OUR IMMEDIATE PROSPECTS

It is hard, too, for some of us older men sit still and not criticise this or that appa rent act of omission or commission of the Government. Nearly everyone has some where in his secret recesses the conviction that he could do the work better himself, but let him remember that the slashing critic is often a very mediocre performer. We are is often a very mediocre performer. We are passing through the accustomed phases. passing through the accustomed phases. First, the light-hearted disdain of the enemy. the unreasoning certainty that everything all right and that victory is ours merely by wishing for it. Then comes the second period, the period in which we are now, when there is a sort of uneasy feeling that we cannot go on in a nice comfortable optimistic everything as usual kind of way, that some thing has to be done, we don't quite know what, we are depressed without quite know me why, and we begin to look about for scapegoats. But when we are tempted to be impatient, let us see what actually has been done in fifteen months. We have performed the miracle of raising, training, and equipping an immense army. We have entirely reorganised and immensely increased our munition factories. Germany has lost practically all her colonies, and all her ships have driven from the seas. These months of mutual anxiety and fierce fighting ive consolidated the British Empire as no thing else could have done, have revealed to us the splendid character of our manhood, and given the lie to the croakers who declared that we were a decadent race. have, too, tightened the bonds of friendship with our Allies—particularly with our great neighbour, France, a country especially dear to architects—and out of the great welter of war is emerging a clearer view of the im-image issues at stake. I think, then, that it is our part to have a fixed and serene intention to be victorious, to remember the tremendous responsibilities of our Government, and to lighten those responsibilities by doing everything that we can to assist and support it, and so help to form a united public opinion resolute to do everything possible, and impossible, to bring the war to a letorious end.

I feel, ladles and gentlemen, that I owe or an apology for dwelling so much on the ar and not at all on architecture. I will confess that I had intended merely to give a short account of what we were doing for a snort account or what we were doing for our brother architects, but my pen has run are ay with me. After all, what is there really it importance except this great war. On the could everything depends, and every he on contribute on thing towards this result. tot by marbid broading, not by zhoomy fore bodates, but by realising its tremendous sytionings, understanding the sacrifices which must be made by us all, and by belowing that victory is certain, if we as a ration bend our whole energies to the task, and shrink from nothing which will give sictory, without which life would not be

portra.t of Mr. Reginald Blomfield, work which would be, he believed, one of the most appreciated of their valuable col-lection. Mr. Shannon had had an unusually lection Mt. Shannon had had an unusually difficult task. They all knew their late difficult task. They all knew their late President had almost every aspect but that Laughter and applause.) of repose. of repose. Laughter and appliance.) Mr. Shannon had had to suggest and convey to canvas a president full of movement, energy, and brisk decigon, and he felt size the members would realise that he had produced not only a fine picture, but what was familiarly called a "speaking likeness. withdrawal of the curtains the portrait was revealed, in three-quarter face and kit-cat length, which was a noted feature of the water-colour room at the Academy exhibition last summer.

Mr. Blomfield said he could not pronounce as to the merits of the portrait, but was sure the Institute had obtained a gool pic-He proposed a hearty vote of thanks Mr. Newton for his address.

This was seconded by Mr. J. Alfred Gotch, who thought that perhaps the President took rather too gloomy a view of the amount of recruiting that was going on. Whatever Whatever might be the case in London, there seemed very few eligible men in the Eastern Midlands who had not yet offered their services

In response to the motion, which was carried by acclamation, the President said he supposed every occupant of that chair felt surprised at being expected to play the part of "first old man." No one, he supposed, felt old until he was called upon to fill this kind of position, when he made a mental calculation of a very sobering kind. The war had added much to the responsibilities of the position, and had created all sorts of situations without precedent to guide one. But he found himself surrounded by friends who helped him to steer through these nucharted waters, and he trusted that when he handed over command to his successor it might be in times of calm.

# ---THE BUILDING NEWS" DESIGNING CLUB, 1914-15.

After due verification, the prizes awarded to the winners who submitted designs during the past session, as announced in our issue of October 13, have been despatched to their recipients as follows:

recipients as follows:—
First prize of £10 10s.: "September
Morn"—Mr. H. W. Smith, care of Mr. E.
W. Allfrey, M.A., 57, High Street, Oxford,
Second prize of £5 5s.: "Penwith"—Mr.
J. Clark, care of Messrs, Cowell and
Drewitt, architects, Lennard's Chambers, Penzance.

Penzance.
Third prize of £3 3s.: 'Walbroke'—
Mr. W. Brooke, care of Messrs. R. Castle
and Son, architects, London City and Midland
Bank Chambers. Cleckheaton, Yorks.

In reply to inquiries, we do not contem-plate continuing the Club during the ensuing It was founded for the twelve months. It was founded for the length of the students and junior members of our profession, and the present time demands the whole service and self-sacrifice of all such. It is getting it, we are proud to say, in larger measure than from any similar valling, and we are little likely to get much worth attempting from the very few whose place is in the ranks with their brethren, but who have not yet taken it.

New Wesleyan day schools in Ribbleton Avenue, Preston, Lanes, have just been opened. They were built from plans by Mr. F. Howarth, M.S. V. at a cost of over £4,000.

M.S. V. at a cost of over £4,000.
A set of carved oak alter rails in a design adapted by Mr. C. M. Oldrid Scott from the carving of the Watching Gallery in the Saints Chapel, was dedicated on Saturday in the nave of St. Albans Cathedral. They form a memorial to the late Mr. Charles Woollam, for twenty-six years a churchwarden for the Abbey parish.

years a churchwarden for the Abbey parish. The death was announced on Saturday of Corporal W. H. Marley, R.F.A., of Buttris Road, Barry, Glam, killed in action in France. H. was a son of Mr. W. Marley, of Barry, and was atticled to Mr. W. E. Knapman, M.S.A., of that town, and joined the Society of Architects as a student in 1912. Corporal Marley enlisted in the R.F.A. on the outbreak of war, and has died on the field of honour in his and has died on the field of honour in his twentieth year.

### THE DISTRICT SURVEYORS ASSOCIA TION.

We briefly acknowledged the receipt last reek, just as we were going to press, of an nteresting account of the District Surveyors Association, by Mr. Henry Lovegrove, F.S.L. A.R.I.B.A., a Past President and Hon. Secre ry and Treasurer of that body. In twenty our pages, it covers the main incidents of the istory of the association, and gives many tore or less brief notes about its members.

The association embraces the District Sur eyors of Buildings appointed under the Acts nce the passing of the Metropolitan Building et in 1844, although Acts of Parliament of huildings visted many years before; in fact, after the reat Fire had swept away the picturesque ut insanitary old City of London, an Act as passed in 1667 giving the Corporation of ne City power to appoint surveyors or approvisors. In 1725 the buildings law of the ity was extended to include four large Lonon parishes, viz., St. Pancras. St. Mary lebne, Paddington, and Chelsea. The Act of The Act of 44 was a more comprehensive Act, and gave officers the title of District Surveyors. aking provision for an examination to show at the surveyors were competent to per em their duties. The Metropolitan Building t of 1855 repealed the former Act, conmed the district surveyors in their offices, d transferred their appointments to the wly created Metropolitan Board of Works The more elaborate Act and the many quesfins of law and procedure appeared to render icessary some special society where the trict surveyors could meet for mutual sistance.

The first minute book records the sending of a circular letter, dated January 20 45, calling a meeting at the London Coffee lose, Ludgate Hill. At this meeting the flowing attended:—Mr. John White (in the Llowing attended:—Mr. John White (in the cir), Messrs. C. R. Badger, George Aller Corge Pownall, Robert Sibley, George Utch, H. E. Kendall, William Lovell, E. Foxhall, Charles Beachcroft, H. E. Kendl, junr., William Grellier, T. L. Donaldson, E. a July, 1849, the members dired together i the first time.

1 July, 1851, the death of Mr. White was arounced.

lessrs. J. A. White and J. Jennings were el ted members, having been appointed to Nth and South Marylebone respectively.

1 January, 1852, it was decided to issue reprts of cases. In April, 1853, a piece of ple was presented to Mr. R. Hesketh for valable services rendered as hon, sec. In 18 meetings were first held at 9, Conduit Hanover Square, W. In January, 18), Professor Donaldson, on behalf of the mobers, presented a handsome silver salver notes. presented a nanosome saver saver to Mr. Charles Fowler for his services as no sec. In January. 1875, a successful dier was held, twenty-four members attered, with Mr. George Vulliamy and Mr. Hege Godwin as guests, and Mr. Edmund W. Attense in the shair. In April 1883 Widthorpe in the chair. In April, 1883, The C. Fowler received a silver loving cup an other articles in commemoration of his sences as hon, secretary for twenty-one ves. In 1884 the constitution of the society wa altered, Mr. Edmund Woodthorpe being cleed the first president.

Irly in 1887, after a very severe contest, MrThomas Blashill, F.R.I.B.A., F.S.I., was eleed superintending architect to the Metropolan Board of Works. He was born at Subn-in-Holderness, near Hull, and after son time with an nucle, a land agent at Heford, he entered the office of Mr. J. W. Peyld and afterwards that of Mr. T. F. Knowley. In 1861 he commenced practice in Oldfewry Chambers in partnership with Mr. C. finslie. He was associated with Mr. Wilam Hayward, engineer to the City, and

assisted in the ending of the Holbert Vaidue

In April, 1887, Mr. Henry Lovegrove, D.S. for S.at. I region, Mr. R. Plumbe having book tear-ferred to West Hampstead, was est is a member by 1889 the Lendon Cerety Council took the place of the Metropolitan Bond of Works in December, 1898, the members were informed of the resignation of Mr. Thos. Blashill, superintending architect, and in March, 1699, Mr. William Edward Riley was elected superintending architect after a wide expensive in architectural matters. For about twenty one years he was in the service of the Government, the last three years as Assistant Director of the Works of the Voluntarity, when he had the super vision of a very large number of important buildings. He is a Fellow of the Royal Inst. tute of British Architects a most inde fatigable worker, and at is not generally known that he is an artist of consideraba merit, and hon, treasurer of the Royal Society of British Artists. In July the members of the D.S.A. dined together, with Mr. Thos. Blashill and Mr. W. E. Riley as guests, when an illuminated address signed by all the district surveyors was presented to the former as a testimony of the high esteem in which he was held. In January, 1905, Mr. T. Blashill, the late superintending architect, died some what suddenly, to the great regret of a large circle of professional friends.

In February, 1905, the association was in corporated as the District Surveyors Association (Incorporated), and the first meeting under the incorporation was held, the election of officers and other acts of the old body confirmed.

It is difficult to obtain particulars of district surveyors before the Act of 1844, but one name stands out from the rest. Charles James Matthews was articled to Augustus Pugin in 1819, and through his father's influence was elected surveyor for Bow, a post which he soon resigned, and, taking to the stage, became a famous comedian. When the 1844 Act was passed, many eminent architects held office, one being Mr. Cockerell, father of Professor Cockerell.

Prior to 1891, it was usual, on a vucancy occurring, for between thirty and firty pro-minent London architects to effer themselves. but since that time the candidates have usually been assistants, or young men who, from no fault of their own, have not seen their way to make a successful practice. Giving the whole time to the office, remarks, Mr. Giving Lovegrove, is probably to the public advantage. but with the change there should have been some guarantee of a minimum income, with a pension on resignation. Through all the years since the District Surveyors Associa tion was founded, the Building Acts have been well administered, one or two members have been their own enemies and had to resign, none were ever charged with conduct unworthy of professional men, and no class of official stands so high in public esteem.

## COMPRESSED AIR.\* PAINTING BY IMMERSION

----

This book is the first on its subject, and as well thought out as it is greatly The necessity of paint to many industries is paramount, and as universally recognised as we wish the desirability of applying paint in up-to-date fashion was. In America lipping and spraying have very largely superseded the brush and the man muchine, especially in connection with metal-work and engineering. Here, as yet, only the firms whose enterprise is the secret of their success and good standing have troubled themselves to instal a dipping or spraying plant, and have benefited, but the indications inand have benefited. crease that ere long no factory will be complete without one, and to all wise enough to recognise this Mr. Jennings' book will be of the utmost service.

Dipping, of course, is no novelty as far as the principle goes. But recent improvements in the form and construction of the dipping

tank and its approbles hoists, etc. have so in a had gibig linears so in atited operation that speed and efficiency have been visitly as that spend and efficiency have both visity di-creased. On these many, its right is a given, together with lite or hadding factories where they are in successful operation. One of the most simple but effective panel may be seen at the words of Mesers. Haywards, Limited, I mon. Street, Borough, S.E., a him better above it is most of our own is addi-tionally and handless the most of sexual conthan many, and one the uniterior excellence of whose productions is due only in a less degree to the initiative of its able successive diretors than to the foresight which has always anticipated all practicable improvenouss the process of marmon ture of its special tree The plant consists of a shallow tind, in who iron and steel goods are dipped in horizonta position. The lottom is slanted, and the contents duly stirred from time to time. The principal goods painted are Haywards lights. ubiquitous in every street of every city; then metal casements, searchy less familiar; and their patent steel collapsible gates.

The older methods of painting by com-pressed air of the pump and kettle type were

only partially successful, and attention, therefore, was directed to the concentric form of sprayer, now almost universally used often to the astonishment of uniternia observers, who are unable to understand how far superior is the result of the control of the paint by a suitably constructed spray then that achieved by the human hand and a hog schair brush. Many forms of air-sprays are shown, with their accessories.

With both dipping and spraying the saving

of time as compared with hand painting is enormous in many cases the work can be done in one twentieth part of the time it would take with the ordinary brush, and infinitely better. Failures, wherever they have occurred, have been found the result of the injudicious selection of one process or the There other, or the defects of the paint used. drawbacks are easily overcome by the exercise of a little common sense, and the means of doing so are explained at useful length by Mr. Jennings.

Altogether, the book is a unique one as

regards subject and treatment. Many ably-written trade manuals are noticed almost weekly in these pages, but it is at rare intervals that we find advantageous and complete novelty so clearly demonstrated or with

such convincing testimony.

## THE CAPITAL OF THE CANAL ZONE

Gary, Ind., and other made to order extres will find a sister in the new city of Balboa, which Governor Goethels, of the Canal Zone. is constructing at the Pacific entrance of canal to be the capital of Uncle Sam's newest province. The administration building at Balboa, which will be the capitol of the Zone, differs from similar buildings else where in that it contains no legislative halls. the government being administered from the War Department at Washington, all the chief officials, according to executive orders.

Practically the entire town of Balboa will be of concrete, and to alleviate the glitter ing newness of the city a supervising hort. culturist has been appointed to promote the "city beautiful" movement, both there an at all points along the conal. It is pointed out by the Ohio Archivet that no other climate in the world offers better opportunities for the development of beautiful garder schemes.—Plants, trees, and shrubs are being furnished free to the residents by the Govern-

Mr. W. D. Caroe, F.S.A., F.R.L.B.A. has been offered, and has accepted, the appointment of honorary consulting architect to the discess of St. David's.

At Southgate, the district church of St. At Southgate, the district church of set Morey, built in 1903, is about to be chlarged from 240 to 709 sittings, at an outlay of £6,679. The architects are Messrs. Barker and Kirk, of Buckingham Street, Strand, W.C.

### HOUSING CONDITIONS AND RENTS thick, as at present, The heavy houses in IN SCOTLAND

At a region Land Hunter and Professor it is held a majory on behalt of the Secretary for Scotland into the increases of tris of small dwelling houses in the adistrial districts in Scotland.

Mr. Alexander Walker, the City Assessor of to asgew, was the first witness examined. He cave figures revealing the fluctuation of erts in certain houses in the different wards the city, and also showed that since the regarding of the war the number of vacant cess had greatly dminished. In regard to 77 selected houses, he stated that in the asc of 185 there had been no increase in the fert side May, 1914. In 208 there had been

a teases ranging from 1d, to 3s, 4d, pet month.
Mr. Walker Smith, M. lust, C.E., Controlle, of Housing and Town Planning and Chief En-giseer to the Local Government Board for Scotland, said there was no doubt that the standard of housing for the working classes of Soutland was by no means a high standard and in many cases and in many areas the Contrasting standard was distinctly bad English industrial parts with those of like for like, the England, he said that, lish working man had about 40 per cent, more house accommodation on the average, for which he paid an additional rental of only about 13 per cent. Private enterprise had been more or less stagmant in relation to the provision of working-class houses within the last seven years. As to the reasons given by owners for this stagnation, they were legislation, actual and feared, and increased cost of labour and materials—the cost having advinced generally from 20 to 25 per cent. Only when economic circumstances owners to obtain increases in rents would private enterprise be automatically switched on again. The present builting conditions in the West of Scotland did not permit of a olution on the normal process of evolution. The witness said housing difficulties were becoming extremely acute. Clydebank and Renfrew were more than full—they were overflowing, to the extent of about 16,000 vorkers at Clydebank, principally at the Dalmuri Shipbuilding Works, and about 5,000 workers from Renfrew, from the boilermakers' and machine tool works there, believed that at the present time the provision of permanent houses in the area neigh-boaring Glasgow was a physical impossi-bility. Neither the labour nor the time for the provision of houses could be found, and in any case the cost at the present time would render it financially impossible. only place (witness went on) where any addi-tional houses could be obtained in large numbers in the Clyde valley at present was in Glasgow itself, and these numbered only 8,799—It was common knowledge that a very in Gasgow itself, and these numbered only 8.799. It was common knowledge that a very considerable number of houses in Glasgow were unfit for habitation. The witness after-wards expressed the view that in the near future the whole of the existing accommoda-tion must be taken up, and there would then be too open market in the ordinary sense of the term. He estimated the additional expenses property owners had to hear as a result of war conditions, and gave what he considered a fair adjustment of the rent of a £14 house. He allowed an increase for repairs and for the alyance in interest, but held that insurance and collection and man agement expenses were not affected. As to empty houses in Flori delets, he thought that there should be some billed on. The result of his calculations was that he estimated the total larease on a Lose of £17, rent and rates combined, at 18s 94. That was to say, 55 per cert on the maximum payment.
67 per cent on the reason proper of £14.

M: Thomas Brunne, member of the Scattish tandled referees under the Finance Act, and the great realt of housing in Scotland was the exect at of tenements which hast 150 years and can be their day, ultimately becoming some It local mathemates were allowed to put as healthings which would full to pieces in - cry years this would solve the Scott, sh housit 2 problem more than anything C-e. Witness would allow brick walls 14 instance in Sectland a stead of stone walls 2 ft.

Scotland accounted for dearer rents compared

with England.

Mr. William Gillies, Dean of the Faculty of Procurators in Glasgow, dealt with the fluctuations in the value of heritable pro perty in Glasgow, beginning with the boom in 1875. It was in 1910, he said, that they had the greatest number of unlet dwelling houses in the area of Glasgow as it then existed, and not including Partick or Govan. Rents naturally tended to fall, and the rates were going up all the time. This caused in a good many instances that came under his notice no return at all to the property owner.

Mr. William C. Faulds, President of the

Association of House Factors, said that in regard to property factored by him east of Glasgow Cross and north of the Clyde, inreases had been intimated or were to be intimated varying from 10 per cent, to 5 per cent, on the assessed rental. Upon the gross rental, including rates, the increase varied from 12½ per cent. to 6¼ per cent.

Mr. William Menzies, manager of the City

Improvement Department of Glasgow Cor poration, gave evidence as to the smaller houses owned by the Department.

Other witnesses declared that 10 per cent. increase on the net rental was imperative to

recoup owners for the burden of increased rates and higher cost of money and repairs. It was stated that there is a complete house framine in certain Clydeside towns, while the margin in Glasgow is very small.

Witnesses stated that the War Loan at 4½

per cent, made lenders less cager to invest in property. Some demande l 5 per cent. All lasses of tradesmen were benefiting from the higher wages. It was said that the only people who felt the pinch of living were ware It was said that the only honsemen and salaried folks. Owners asserted that the increases made were

instified.

Mr. Andrew M'Bride, who represented the Labour Party Housing Committee formed two years ago, deposed that as private speculators had practically reased building, and that as many of the houses were admitted to be unfit for human habitation, they were in Glasow within easy reach of a famine in houses. The standard of housing in Glasgow was below that of any other city, and per acre they were the most congested city in Great Britam, with 53 per acre, while Liverpool, the next worst city, had 45 per acre. They inged that at the eurliest moment the town council should, on a definite and permanent plan. start building cottages in order to secure healthy houses for the citizens, and that for this purpose a loan free of interest should be taken from the tramway surplus. He held that it was impossible for private enterprise, either when the conditions are normal or under the present abnormal conditions, to build healthy houses at a rent which could be paid

Bailie James Stewart, representative of Townhead Ward, a member of the Labour Party's Housing Committee since its foundaalso spoke as an opponent of private enterprise. Any loss, he held, ought to fall on the State and not on the municipality. turther evidence, witness admitted that there hal been an increase in the cost of labour and material; but he submitted as against that that the repairs carried out just now were less than they were three years ago, and the amount expended on repairs would conse

quently not be so great

The city surveyor of Glasgow stated that in his area there were only five unlet houses, ompared with 1,200 five years ago. In three firms over 30,000 men were employed. The rent- leid risen, and some tenants had had to pay two advances this year. He did not agree with the landlords plea regarding the The advance extra cost of require. rate of interest demanded by the bondholders was soid to be helf the reason for dearer rents; the lost of reprirs accounted for the other half. In reply to Lord Hunter, wit ness stated that in order to return to pre war rents the extra cost of labour and material would require to be considered.

Mr. Genree Boss, burgh surveyor, Clyde bank, stated that in that burgh there were

at present 8,947 houses, which were almost entirely occupied by the working classes. In 1871 there were 105 inhabited houses, with a population of 816, and these ligures gradually increased till in 1914 there were these ligures 8,730 houses and 44,741 of population. In 1910-11 there were 1,276 empty houses; in 1913-14 there were 218; and in 1915-16 the number was five. Building in Clydebank generally came in spurts. For example, generally came in spurts. For example, between 1905 and 1908 almost 3,000 houses exampie, were built, and consequently the supply was above the demand. Messrs. Beardniore put up a lot of buildings, and speculative builders also came into the field. During the last two years only fifty houses were built, but since May, 1914, plans for 565 houses had been passed by the Dean of Guild Court. There was at present a big lot of building going on, and there was a large demand for houses, arising from extra work and more people being auxious to reside near their place of employment. A scarcity of houses always meant a tendency to increase rents, and that tendency had been showing itself recently. Increases had been put on rents of single apartment and room and kitchen houses of from 9s. to 10s. to about 50s., or about from 5 to 13 per cent. In some cases there had been two increases since the war started. The rates on owners and occupiers for the current year were lower than they had been for some years.

In answer to Professor Scott, the witness said that the expenditure on repairs during a period of five years was as low as 4 per cent, and as high as 25 per cent, but in some of those cases the property had not

been repaired for twenty years.

Mr. James Steel, vice-president of the Glasgow Factors' Association, said that for some years the result of the excessive number of houses had been disastrous. Within the city the depression was not so acute as in Govan and Partick, where for some years proprietors, instead of receiving any return on their capital, were paying debit balances half-yearly. Witness offered instances of increase I tradesmen's charges. Thirteen items usually found in bills for plumber work had risen from 32s. 2d. in 1905 to 49s. 5d. in 1913. and the present price was 66s. 1d. Then there was the interest on bond interest, and fully 95 per cent, of those he represented

had horrowed money on their properties.

Mr. Archibald Speirs, president of the Glasgow House Owers' Association, said that from 1900 to 1905 rents remained practically stationary, and after that, owing to the over supply of houses, a fall took place, which had not yet been made good. In rents that were increased prior to the var they were only trying to get back a portion of the rent that had been previously reduced. Houses not let in ordinary circumstances had been let to a small extent, but there were still many houses in Glasgow unlet. Owners required 10 per cent, increase to put them a position similar to that before the war.

Mr. Samuel C. Eadie, builder, said that on the whole rents were rather lower than were fifteen years ago. Subsequently evidence was submitted regarding the situition in Rutherglen and Greenock, the views of the respective particles and Greenock, the views of the respective parties being generally along the lines of evidence already reported.

A new church hall has been erected at Shelton. North Staffordshire, adjoining the Rectory grounds. The building contains a hall 60 ft by 35 ft., with ante-rooms, secretary's office. by 35 ft., with ante-rooms, secretary's office, men's club, parlour, kitchen, and is lighted by electricity. A bowling green and tenus court are included in the scheme. The court actor is Mr. Thomas Godwin, of Hanley, and the work has been designed by Mr. A. W. Moss, architect. Hanley.

The Westminster City Council on Friday de the Westminster City Council on Friday decided, subject to the approval of H.M. Office of Works, to offer the large triangular paved island in St. Martin's Place, between the National Portrait Gallery, the Westminster Hall, and the end of Chandos Street, as a site for a memorial to Miss Cavell, to be even ited by Sir George Frampton, R.A. The site is that on which the Gordon statue stood executed by Sir George Frampton, R.A. the streets is that on which the Gordon statue stood for a short time. Mr. Lewis Harcourt, a First Commissioner, has susceited the expropriation of the site for the purpose.

## Currente Calamo.

The President's address at the opening of he eighty-second session of the R.I.B.A. on Monday was delivered to a small audience it 3,30 p.m., and the whole proceedings inished in less than an hour. Naturally Mr. Ernest Newton had little to say about matters hat members usually look to the President or comment on. All will be glad to note hat a further appeal has been made to the hancellor of the Exchequer to deal fairly nd honestly with those of us whose incomes re falling to zero, or have vanished alto ether. Certainly, as Mr. Newton said, relief "hardly meets the cases of those ho have nothing to be relieved of, and hose present impecuniosity is due to the port-sighted eagerness of the Treasury to op building operations, which it was romised by the Local Government Board fould be encouraged. One hopes, almost gainst hope, that Mr. McKenna may realise atter than some of his colleagues elsewhere hat architects have done to help the mmon cause. The President's summary ereof is familiar to our readers, and the cord is a noble one. We trust his conading appeal to all of us will hearten the able-minded and touch the hearts of the ckers. We are glad be endorses our own pevious criticism of some of the methods of ane of our authorities-notably those responsile for "the exasperating and dead appeal the picture poster"!

Accidents will, or must, happen durn ; kilding operations. When these affect those eaployed on the work compensation is paytle under the present law, which practically arounts to an insurance. But when third prties suffer, who are neither in the service the builder nor under a contract with him, oficult legal questions often arise. The last example is the case of Elliott v. C. P. Rierts and Co., Ltd., heard before Mr. Just . Lush and a common jury. The defendants we re-building a school for the L.C.C., and b their contract they were bound to provide a plant, etc., and afford facilities to any o er tradesmen employed by the Council, in clling the reasonable use of any scaffolding. The defendants had control of the premises ar building. The plaintiff's case was that howns lawfully using a gangway on the job. mle of two unfixed planks placed diagonally hir up across an open space, with no fence or ail. The plaintiff had used this safely fosix weeks, and the planks were obviously no fixed. Then he fell and was seriously The jury found negligence by the in red. dendant on the facts and gave plaintiff a e ict with £2,000 damages. But the judge ersed this on points of law and entered u ment for the defendants, the builders. Ashere was no contract between the defendand the plaintiff the question was what u they owed to him in law. The builders La allowed him to come on the job and use the gangway, but they did not invite him to a so. Holding there was no duty to provic a safe gangway as between the parties the udge decided for the defendants. The cas will go to the Court of Appeal, where we hall hope to get a clearer view of this ver important practical point for builders ancontractors and tradesmen.

Clar flaps, opening in the highway, have the gal principles of liability may seem to be average of that submitted at the bi-monthly

sett od, the stempton pplied in pract In the resent case of W on r. Hodgson -King for Bossey Co. Limited, the first were common and tare a coough, but the lawyers differed a dear. There a how tell through a cell in flancing or in an the pavement and sued, through he tather, for damages. The defendants were the corners of the place which was a fiel pub., house where they were delivering beer to in ans of a contractor engaged for that work. The plaintiff sued both the ewners and the tenent, and the County Court judge doubled against them both. But, on the owners' appeal, the High Court has now reversed this ruling, and so no me is yet made halde. The Court held that, as the defendants, the brewers, and owners of the premises, had engaged an independent contractor to do the carrige of their beer, they were not legally responsible. Certainly, the carter was not doing work on the surface of the highway which would necessarily be a public danger, and thus bring in the owners as liable. The plaintift had sued both the owners and tenant, not adding the contractor. of whose existence he may not have been aware. But it would have cost no more to include him in the action and so brought it against the three as being liable, jointly or severally, in the alternative. If he was known this would have been the proper and the safe course to adopt. The carting contractor can still be sued if negligence can be shown against him. Obviously, someone should be liable in damages, unless, of course, it was all the boy's own fault

In view of the part taken by the Society of Architects in the establishment of the first Atelier of Architecture in London by the Beaux Arts Committee, the following account of a similar movement in Sydney is of interest. Its inception and success appears to be entirely due to the single-handed efforts of its promoter and patron, Mr. Gordon 8 Keesing, A.I.A., late of the Atelier Prevot. New York, and Atelier Gromoet, Paris. In the course of an article published in "The Salon," Mr. Keesing says: "Realising the disabilities under which the more ambitious architectural students of Sydney labour as regards their studies. I evolved a scheme by which the regular functions of an Atelier are combined with the most important elements of a University course. I drew up the curriculum as a result of criticisms I beard whilst in England, of the work our students submitted for the R.I.B A examinations, as well as from the observations of local architects and in addition from my own experience having had the experience of being an Australian trained draughtsman in commetition with the Atelier and University trained men of New York," The quick success which has met Mr. Keesing's endeavours justifies the methods he is employing, and the improvement which has been accomplished, in a few months, in the work of some of the members of the Atelier is surprising. The novelty to the students of the new methods, the sudden ness with which they were being thrust upon them, and the deflerent conditions which obtain in Australia from those existing in Paris, New York, or even London, where the first Atelier started with Paris-trained men among its members all threatened to he insurmountable. Quite the contrary has happened. Some of the members frequently do quick "design" problems which would gain a pass in the rather severe examination of l'Ecole des Beaux Arts. Some caust a good deal of litigation, but though of their more finished work is above the

exhibition at the Ne Bessia Arts Somety that attack And the one · Theo goal been in existence for to members have a good to all and the state of the geography of his transaction that in The the following filat year items : A sheet of Classic details, parefully drawn, mked in and a cood; a short of measured work if rither or the detail measured work if rather  $0 \le r$ , as detail of a reature, the visco because or, anyhow, sufficient to show the relation of the feature. must be encorted a protection and and planning in each important its.e, fin shed in pencil and colour, and a number of additional problems giving treedom - le-ign, plan and construction (this class of work has the additional objective of developing speedy draughtsmanship, and each problem has to be finished in about twelve hours : freehand sketches, lectures in history, design, and allied subjects. Mr. Keesing's only trouble is the lack of any supporting institutions, which devolves such a comprehensive curriculum on him single handed

With a much larger army in the field than we have ever had before, the percentage of disease is much smaller than in previous campaigns on foreign soil, owing to the excellence of the sanitary arrangements, and the efficiency of the medical staff. Sir James Crichton Browne, in his presidential address to the Samtary Inspectors' Association, is responsible for the statem at that if the sickness in the present war had been at the same rate as in the South African War in proportion to the number of troops engaged, we should have lost more than a million men from sickness. Our losses in killed. wounded, and missing, in all fields of operations, now total nearly half a million, or, to be precise, 493,294 Sr James contended not only that the paw of sanitation lad been conspicuously shown in relation to sick ness in the field, but that it had also enabled us to send our troops abroad in a sound and efficient condition. Of the men who offered themselves for service in the first year of the war, one million were sail to have been rejected-all born from eighteen to forty years ago, in the bad old insanitary days, as Sir James described them

Dr. William Martin's unteresting lecture last week to the British Numesmatic Society on "London as Illustrated upon the Great Seals" will, we hope, second his desire to draw attention to a source of information, hitherto somewhat neglected, concerning the appearance of Stuart London, and by so doing lead possibly to the discovery of the original view of Old London from which the illustration on the Great Sals and Similar pictorial efforts had been drawn. The carbest view shown on the screen was the wonderfu! cartographical attempt at pertraiture les the well-known corporate Sea, of the City of London, 1224, and pictures were ilso given of London and its vicinity as shown upon the Barcheston tapestry, and of the yew occurring as an inset to the map of Hondius, to be seen in Speed's Atlas of Italy. From these there was a natural transition to the equestrian portrait of James 1. 1 who has panorama of London appears between the horse's legs. The beturer then passed to the Great Seals, and showed a successor of slides from Charles I. to George I., where between the horse's legs panor mas et L n lon occur. in which buildings such as St. Pau's and Lambeth Palace could be identified. It was noted that the horse shown on the seal of Richard Cromwell seemed to be exactly like the horse on which Charles I, is mounted at

## Correspondence,

DEDUCTION FROM AND ADDITION TO PRICED BILLS OF QUANTITIES

Sir, -- Your account of the resolution come to by the Works and Stores Commutee of the Metropolitan Water Board, given in your issue of the 20th, is quite interesting.

It shows how public bodies ignore gene rally accepted methods of carrying on bus. For a considerable number of years it has been the practice of contractors tender-ing to alter the total amount as priced out by adding to it or deducting from it an amount, not as a rule any particular per centage, but a sum which might approx. mate to a percentage on the total of the estimate as made up in many instances by an estimating assistant in the office. The est mating assistant in the office. The amount deducted depends in some cases on how anxious, or the reverse, the contractor is to get the work, and perhaps on his views as to the prices put down by the estimating assistant. No matter what the object in view assistant. No matter what the object in view may be, the custom prevails, and in many cases it has the following effect: that where alterations or variations are made in carrying out the work, the alterations have to be priced out at the original prices, paying no attention to the sum deducted at the end of the bills of quantities, and so the work done under items of alterations costs more than the original prices as reduced by the percentage. This may be all right for the contractor, but it is not fair to the client, who naturally expects to pay pro inter for any extra work or variations he may desire to

My object in writing you is to call the attention of members of the profession in general, and the Metropolitan Water Board in particular, to the fact that their proposed clause is not as clear as it might be.

I take it the object of every contract between employer and contractor is to make the obligations on either side as clear possible, not an easy matter in a building contract; some may say that some particular form is "too hard" on the contractor, some others say a form does not sufficiently tect the employer, and so there can be no real agreement between the parties, and the result is a compromise.

A building contractor's business is always

of an eminently speculative character; low prices necessary to get work sometimes mean loss, high price in tendering often means want of work. But, given a particular form of contract, no builder need accept it; he need not tender, and then both parties are satisfied more or loss.

What, in my opinion, is required is a form of contract as fair as possible to both sides and set out in such clear language that there and set out in such clear language that there cannot be any mistake, even to the legal mind, as to what the meaning is. This, I do not think, is attained in the clause suggested to the Water Board.

In nearly every bill of quantities there are some "provisional sums," the amounts of which cannot, or should not, be subject to any deduction by way of percentage of otherwise, so to these the percentage should not apply, and this is the point which I think is not made clear in the clause suggested to the Water Board.

In my own practice I use the following tause, which I suggest is better and clearer than the one in question; - "Should the said schedule of quantities on examination show that the prices when carried out do not with the amount of the tender, or if any sun is a Hed to or deducted, to add to or reduce the total of the amounts so carried

visional sums, and it is found on examination that the prices when carried out amount to £1,100, the first thing to do is to deduct the amount of the provisional sums, viz: £100 from the total of £1,100. From the remainder (£1,000) £100 has been deducted by the contractor, which equals 10 per cent. This reduction applies to every item in the bill of quantities except provisional sums, and it would be deducted in one sum at the end of any variation account, after taking off the amounts of the provisional sums.

I hope I have made my system clear, and I should like the opinion of your readers as to whether it is clear, and, what is of more importance, whether it is fair between the parties concerned.

Apologising for the Action am, S.r., yours faithfully,

MAX CLARKE. Apologising for the length of my letter, I

### RISE IN HOUSE RENTS AND MORT GAGE INTEREST.

To the Editor of THE BUILDING NEWS.

Sir.—The Land Union has had under con sideration the policy of owners of small house property of raising their rents, and the tendency of mortgagees (particularly of that class of property) to increase the rates of interest upon mortgages created prior to

As regards house owners, no one having any knowledge of the subject can deny that heavy burdens have fallen on them owing to the increase in the cost of repairs, extra premiums for insurances, and other causes, which in normal times would justify an increase of rent, but the Land Union has no hesitation in asking owners to refrain from raising their rents during this war, and it cannot too strongly condemn attempts to shift the burdens of personal taxation on to their tenants.

As regards mortgages, the Land Union re cognises that money has become dearer since the war, that lenders are often borrowers themselves, the bank rate has risen, bankers charge higher rates of interest, and mortgagees, especially those who have lent money on small house property, are often them-selves comparatively poor people. Notwithstanding these facts, it considers

the present time most inopportune to disturb existing mortgages or to raise the rate of interest, the consequent effect of which must be to cause a rise in rents or to give a plausible excuse for raising them.

The Land Union is therefore well aware that the course it advises will in some cases involve considerable sacrifice, but in these times sacrifices have to be made by us all.

On behalf of the council, I make an earnest appeal to the patriotism of house owners and mortgagees to abstain from raising rents and rates of interest now-a course which I am convinced is in the best interests of the whole country during this world-wide crisis.—I am, yours obediently.

DESBOROUGH, Chairman of the Council

The Land Union. St. Stephen's House, S W.

He was initiated not the Newstead Lodge (No. 47) in 1865, and twelve years later was appointed Worshipful Master. Among other effices which in filled was Prov. Grand Supt. of Works, Drov. Grand Treasurer, and Prov. Grand Warden. He was formerly a member of the Vibey Chapter. Mr. Sutton was twice martied, and leaves a widow, two sons, and three langueters.

We regret to hear of the death of Mr. Lunes Brady, one of the founders of the Clerks of Works Association in 1882, who as passed away after a long and painful all passed away after a long and painful sillness, at the age of seventy seven years. Wr Brady was elected to serve upon the first committee of the association, and in September, 1833, was appointed managing editor and publisher of its Journal, and continued to hold that position with the exception of a two and a helf years interest. ception of a two and a half years' interval— until the end of 1909, when, through failing health and advancing years, he retired from its management. He continued to take an interest in the progress and welfare of the association to the end of his days.

### ----LEGAL INTELLIGENCE.

BIRMINGHAM BI'LLDER'S AFFAIRS
A meeting of the creditors of Albert Victor
Hopkins builder and contractor, 39. Thorp
Street, Birmineham, was held on Friday at
the Board of Trade Offices in that city. The
debtor's statement of affairs showed gross
liabilities amounting to £2,334,10s, 10d, of
which £1,905,16s, 8d was expected to rank for
dividend: the deficiency was set at
£1,634,0s,1d, The debtor alleged as causes of
failure loss on contracts by the increase in
wages and cost of material since the commence
ment of the war. The Official Receiver (Mr.
A. S. Cully stated that the receiving order was
made on the 30th ult, upon the petition of a
creditor. At the date of the receiving order was
made on the 30th ult, upon the petition of a
creditor. At the date of the receiving order
lave judgments amounting to £250, 11s, 6d, were
entered up against the debtor, and eight
creditors, whose claims amounted to £342,
13s, 3d, were suing. The debtor, who is thirty
eight years of age, stated that he commenced
has iness in September, 1910, as a builder and
contractor, without capital. He was financed by
a friend, with whom matters were settled up in
November, 1913, when a balance of £30 was
found to be owing by the debtor, and which
was still unpaid. The debtor alleged he was
successful until the war commenced, when
was said until the war commenced, when
was said until the war commenced, when
was said advanced to such an extent
that his existing contracts resulted in heavy
losses. Six months ago he entered into a BIRMINGHAM BUILDER'S AFFAIRS successful until the war compressed, when that his existing contracts resulted in heavy losses. Six months ago he entered into a contract to erect a post office at West Brom wich, which he alleged was a very beneficial contract, having regard to the price at which to had contracted for the supply of material. The debtor's interest in this contract was the next immertant matter connected with his elies. It was voidable on the insolvency of the obtar and the meeting of creditors had see all the supply of the contract was the read blos advisers would be able to formule the next supply of the contract could be necessary to be a pleted and the henclit therefrom accrues the reditors in the shape of an acceptable residual to the authorities having control of the contract the authorities having control of the contract the authorities having control of the contract the authorities having control of the contract the authorities having control of the contract of the set of left proper beoks of account the contract was the authorities having control of the contract of the contract was the count of the contract was the count of the contract of the contract count of the contract of the contract count of the contract of the contract was the count of the contract of the contract of the count of the contract of the count of the contract of the count of the count of the contract of the count of the contract of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the count of the co The time years, and measure successive residually propored. serious personal injuries. The hearing took place, as reported in our last issue, p. 488, on October 20, 21, and 22, when the jury gave judgment for plaintiff, assessing the damages at £2,000, but the learned judge reserved judgment on the legal issues raised. On December 21, 1914, the defendants were engaged in rebuilding a school at Boiner Road, Bethnal Green, under a contract with the London County Conneil, and the plaintiff was employed by the County Conneil to do certain work. While walking across a gangway formed by two planks, not fixed at either end and unprovided with fenced rad, the plaintiff fell, and received serious injuries, resulting in paralysis. The with fenced rail, the plaintiff fell, and received serious injuries, resulting in paralysis. The gangway had been used without accident for three months, and during six weeks plaintiff had crossed it many times each day. The plaintiff said the defendants were guilty of needligence in not providing a safe and suitable gangway. Mr. Moyses, for M. Davies and Co., appeared for the plaintiff, and Mr. McCall, K.C., and Mr. Henderson for the defendants. Mr. Justice Lush, in his judgment, said that in his opinion the defendants were under no duty to the plaintiff to provide a gangway which was safe in fact, though they were under a contractual duty to the London County a contractual duty to the London County Council to afford facilities to any tradesman, meluling the reasonable use of any scaffolding. He did not see how a stranger to the contract between the defendants and the County Council between the defendants and the County Council could take advantage of it. The defendants were mere licensors, and the only duty they moved to the plaintiff was not to expose him to a conceabed danger or trap. It was admitted by counsel for the plaintiff that there was no hidden danger or trap. He referred to the judgment of Lord Justice Phillimore in "Norman v. Great Western Railway Company" (1915) and "Smith v. London and St. Katherine Docks." As in his view there had been no breach of duty, he entered judgment for the defendants, with costs. It was intimated that there would be an appeal. Mr. McCall, K.C., applied that the sum of £200 which had been brought into court by the defendants should be paid out to them. Mr. Justice Lush made the order asked for.

live the defendants should be paid out to them. Mr. Justice Lush made the order asked for.

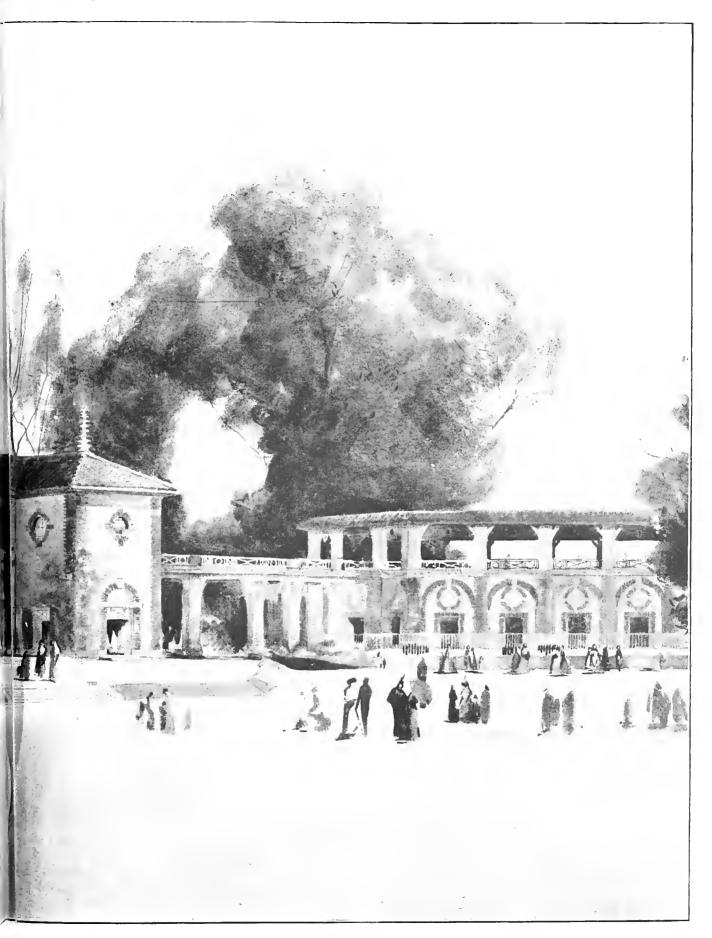

CLAIM FOR COMPLETION OF PURCHASE OF AN ESTATE.—KECK V. FABER (HELLETT AND KEEBLE THIRD PARTIES).—Mr. Muir Mackenzie, Official Referee, sitting at the Royal Courts of Justice, Strand, concluded the hearing on Wednesday of an inquiry as to the damages alleged to have been suffered by Mr. Thomas Charles Leycoster Powys Keck, of Palliser Road, Baron's Court, by reason of the failure of the defendant, Major Walter V. Faber, M.P. for Andover, to complete certain agreements made in May, 1915, for the purchase from the plaintiff of the Stoughton Grange Estate and other property in Leicestershire, of which the plaintiff was tenant for life. The estate of 7.2°1 acres included the manor known as Stoughton Grange and the lands comprising Stoug'ton, Evington, Thornley, Bushby, Oadby, Greaf Stretton, Little Stretton, Houghton-onthe-Hill, King's Norton, Galby, Frisby, Billesdon, Burton, Gwery, and Knighton. The purchase money was £251,700, of which only a deposit of £12,500 was paid by defendant, the balance being due six months later in November, 1913. Mr. G. J. Talbot, K.C., and Mr. H. T. Methold americal for the plaintiff, and Mr. A. J. Ram. K.G. and Mr. W. J. Jeeves for the defendant and the third parties. The action was originally one for specific performance, but by a judgment of Mr. Justice Neville dated July 9, 1914, as the plaintiff had asked for damages in lieu of specific performance, the present inquiry was ordered. The judgment further directed that the deposits amounting to £12,65 paid by the defendant to the plaintiff on entering into the agreements should be forfetted, and ordered that the third parties should indomity the defendant in respect of this is Militar and killed in the present inquiry was ordered. The judgment of the plaintiff on entering into the agreements should be forfetted, and ordered that the third parties should indomity the defendant in respect of this on entering into the agreements should be for-fetted, and ordered that the third parties should ind-unify the defendant in respect of this liability under the judgment.—It was stated in evidence at the present inquiry that there was a great deal of dissatisfaction among the tenants, who could not get their titles. Public meetings were held, and a deputation attended before the Board of Agriculture. Much expert testin only was given as to the value of the property. At the close of the inquiry the Official Referee intimated that he would report his findings to Mr. Justice Neville, the Chancery judge who originally had the act in before him.

far an architect can be deemed negligent in superintending the carrying out of works—when the time of maintenance has expired and no defects have been discovered. In December, 1912, the late T. Woodbridge Birgs received instructions from the plaintiff for the re-erection of a greenhouse at "Chalkpit," Maidenhead. The specification, drawings and forms of tender were prepared in the usual way, a tender of Messrs. Duncan Tucker, of Tottenham was accepted, and they, in accordance with the form of tender, paid a sum of three and a-half guineas for the extra copies required above those provided for in the R.I.B.A. scale of 5 per cent. The plaintiff claimed that such payment was in the nature of a secret commission. From the cross-examination of the plaintiff it appeared that credit was given for the amount received, and also that he was informed of the same. The defendant (the executrix of Mr. Biggs) gave notice of special defence under the statute of William and Mary, saying that what was complained of by the plaintiff was a tort; this his Honour upheld. Another portion of the claim was that Mr. Biggs had acted negligently in passing certain work, but in the statement of claim the plaintiff had stated that the said architect had negligently and improperly issued his cert ficate, thereby complaining of the architect had hegigently and improperly issued his cert ficate, thereby complaining of the architect had negligently with it as a set-off to the action Mr. Biggs brought against the plaintiff. The plaintiff's answer to this in his cross-examination by Dr. Herbert Smith was: "Because we could not get the papers from Mr. Biggs' brought against the plaintiff. The plaintiff's answer to this in his cross-examination by Dr. Herbert Smith, the counsel for the defendant, that the papers the witness referred to were handed ever on December 1, 1914, and the defence was not delivered until February, 1915. At the conclusion counsel for the defendant informed the Court that he had a full answer to the claims made by the plainti

## WATER SUPPLY AND SANITARY MATTERS.

ABERDEEN WATER PROVISIONAL OR-DER.—The Parliamentary inquiry concerning the Aberdeen Water Provisional Order for an improved and extended supply of water for the city of Aberdeen from the River Dee at Aberdeen (referred to in our last issue, p. 489), was continued on Wednesday. Evidence was given by Sir Thomas Burnett, Bart, of Leys, Mr. William A. Carter, C.E., Edinburgh, and by Mr. R. W. Walker, C.E. The Commissioners, after being addressed by Mr. Horne, K.C., for the Dee Fishery Board, and Mr. Macmillan, K.C., for the Aberdeen Corporation, found the preamble proved, and did not find it necessary to insert any provision as to compensation. The adjustment of clauses took place on Thursday, and the Bill was ordered to be reported to the House.

The Oxford Corporation are about to spend £30,000 on the improvement of their roads.

Mr. William Lovell Mason, of Ambleside, architect and surveyor, who died on May 28, left estate valued at £4,750 15s. 9d. gross, with net personalty £2,825 14s 3d.

The new cottage hospital at Oakdale, near Blackwood, Mon., has been formally opened. The architect was Mr. Webb, of Blackwood, and the builders were Messrs, Lewis Bros., of Bargoed. The cost was £4.500.

The length of the railways of Canada was, on June 30, 1914, 30,795 miles, an increase of 1,492 in the previous twelve months. The capital spent during the year was 276,990,069 dols., and the total capital expenditure was 1,808,820 961 dols.

It was reported at the last meeting of the Somerset County Council that the Rhodyate Hill improvement had been completed at a total cost of £1,111, and that the Road Board had paid the balance of their grant. The estimated cost was £1.053, and the excess of £53 was attributed to the increased cost of labour and materials as between the date of the estimate and the completion of the work.

CHESTERTON. STAFFS.—The informal opening of the extensions to the Bradwell Joint Isolation Hospital at Chesterton took place last week. The extensions, which have been carried out under the supervision of Messrs. A. R. Wood and Son, architects, of Tinstall, involved the repair and rearrange ment of the existing buildings, the removal of some of the old blocks, and the erection of a new fever pavilion, steam laundry, administration block, and dis large block, a fresh system of drainage, and the laying out of the grounds. The administration block comprises diangeroom, murses' sitting room, matron's room, waiting-room, kitchen, with larders, and two floors above, used for bedrooms and bathrooms. The old house will provide the hoardroom, doctors' room, and scullery and he brooms for the maids. The new steam laundry comprises a wash-house, ironing room, engine-house, boder shed, steam disinfecting room, and electric storage room. The general contractor is Mr. Paul Pemberton, of Tunstall

DEAN'S YARD, S.W.—A new choir school has been built by the Dean and Chapter of Westminster on the west side of Dean's Yard, at a cost of about £30,000. The new builting, which stands on the site of modern buildings where minor canons used to reside in the Collegate style, is designed for thirty boys, as compared with twenty in the old school in Little Smith Street. On the roof there is a covered playground 106 ft long. Besides a school-master's house, there is accommodation for two assistant masters, a matron, and a domes tie staff. A residence for a minor canon is also included in the new buildings, which have been erected from the designs of Mr. Arthur G. Wallace, of Dean's Yard. The builders are Messrs, Holliday and Greenwood, of Millbank.

DORRINGTON. St. Edward's Church, Dorrington, Salop, was reopened by the Bishop of Hereford last week, after the completion of improvements and an enlarge ment effected under the direction of Mr. Lloyd Oswell, of Shrewsbury. The chancel has been extended 8 ft., the vestry enlarged, new oak choir stalls supplied, a new organ chamber provided, and a new stone chancel arch erected in place of the old one of plaster and brickwork, the seats widened and improved, the heating arrangements improved, new umbrella stands to seats provided, the walls of the nave decorated with cream enamel, and the chancel floor laid with Broseley tiles. The builders were Messrs, R. Price and Son, of Shrewsbury.

MIDDLETON-IN-WHARFEDALE. - The Middlecon-in-Wharfe tale Sanatorium is to be Mr. Adk. con-in-Wharfe fale Sanatorium is to be opened on Welmesday afternoon in next week. November 10, by Alderman T. B. P. Ford, chairman of the West Riding Public Health and Housing Committee. The git occupied by the buildings is a fairly level plateau, part of an estate which comprises 1451 agree Trailly level plateau. 1452 acres. Two blocks of pavilions, each for twenty-five patients, have been completed, one being for women and one for men, and there are also shelters on the ground for twentyfive more patients of each sex, thus providing accommodation for 100 patients in all.
To the north of these payalions two more blocks are in course of erection. Each will be two stories in height, and each story will accommodate fifty persons. Between the blocks of finished and unfinished pavilions there is enough space on each side for a third block of buildings, each accommodating fifty sufferers, so that when these are com-pleted there will be room for 300 patients. The electric lighting plant will illuminate all the institution. For the 100 beds now in use, the cost per bed, including land, buildings, furniture, and also the cost of conveying water for putting in the electric light for the Jaundry, etc., for the first ICO patients, comes to about £170, while, when

it be eventually decided to complete the design and accommodate 300 patients, the cost will be £156 per head. Fowards thicapital expendience the Government is contributing three-fifths, leaving two-fifths of the basis cost of £150 per hed to be raised by the county council.

ROSVTH. Interesting evidence of the progress that has been made in meeting the housing needs at the Naval Base, Rosyth. housing needs at the Naval Base, Rosyth, was provided at the first statutory meeting of the Scottish National Housing Company, Ltd., held at 111, George Street, Edinburgh, on Wednesday last. Mr. John F. Findlay D.L., Master of the Edinburgh Merchant Company, chairman and the control of the Edinburgh Merchant of Scotten. who presided, stated that on September 1 last they were able to sign the first contract for the election of houses at Rosyth. Since that date four other contracts had been entered into, and another one would be eigned almost immediately. The effect of these contracts was that the company had already made arrangements for the erection of 292 houses. A considerable number of houses would be ready for occupation in the beginning of the year. In addition to these 292 houses actually constructed or in course of construction, and preparations for a second lot of houses 300 in number, were being rapidly matured. and schedules would be issued and contracts accepted for them before the end of this year. Some of the houses for which con-tracts had been made were in an advanced state of construction, and no fewer than ninety-nine houses had actually been begun. In some cases, the walls were up and rafters and tiles fixed, and in others the walls were up to the roof level. Concurrently with the arrangements for building those houses. arrangements were also in progress for the making of the necessary roads and sewers. Overtures had already been made to the company to undertake very similar work for the Government in other places. ing to a question, the chairman said the type and size of the houses to be built were determined by the Admiralty.

# PROFESSIONAL AND TRADE SOCIETIES

ARCHITECTURAL ASSOCIATION WAR SERVICE BUREAU: RECRUITING FOR THE ARMY.—We are informed that the Architectural Association War Service Bureau, which has already recruited nearly 1,000 men for the various specialised branches of the Service, is now endeavouring to raise 100 men for the 2. d London Sam tary Company, R.A.M.C. (T.) The work required of members of the corps should specially appeal to members of the archi tectural and surveying professions and others with a good knowledge of sanitary matters. The secretary will be very glad to forward particulars of rates of pay, etc., to anyone ending a stamped and addressed envelope. The War Service Burean is still open to assist all those connected with the architectural and surveying professions and build ing trades by supplying them with informa tion and assisting them to enlist in those special branches of the Army where their professional training is likely to be of value. Men are also required for the Home Counties Divisional Artillery for Imperial Ser vice, ages 19 to 38. Aptitude for map read ing, etc., is an advantage. Arrangements will be made for parties of men enlisting through the bureau to be kept together.

accommodate fifty persons. Between the blocks of finished and unfinished pavilions there is enough space on each side for a third block of buildings, each accommodating fifty sufferers, so that when these are completed there will be room for 500 patients. The electric lighting plant will illuminate all the institution. For the 100 beds now in use, the cost per bed, including land, buildings, furniture, and also the cost of conveying water for putting in the electric light for the laundry, etc. for the first 100 patients, comes to about £170, while, when the second 100 beds are completed next year, the cost will be about £162 per bed. T Hulmo Hall Art Gallery, Port Sun Into was convided to its nimost capacity on Wednesday by an audience who came to see the specimen cottage interior recently ejected the water colour gallery, and to hear a set use in the Colour and Arrangement in the Home," by the curator, Mr. A. H. Howe," by the curator, Mr. A. J. H. Howard. The rooms were very attractive by teasons of the combination of richness of appearance with cheapness of material, and oppear thee with encaphess of matterial, and this was enhanced by the warm glow of the hearths, the beautiful lighting effects, and the final touches indicating occupancy and none life. Colour and arrangement were not matters of expense, but of thought, was the theme of Mr. Howard's lecture. There should be a definite colour scheme for each room, and every apartment from the hall to the bathroom should have its own apprepriate atmosphere or teeling. The exhibition will remain open throughout November, The exhibition will

Mr. Array Tipping, F.S.A., lectured at the Birmingham and Midland Institute the other night on Gardens, Old and New. He said that although originally taught by the Continent, England was now the premier nation for gar dens. Of early seventeenth century examples that at Wilton was the most important, and was recorded in a print. After the Restora-tion, and still more on the advent of William from Holland, there was a great development, both as to size and number, of formal lay-outs. Westluny Court, Owlspen, Levens. Bramham, were among surviving examples, small and large, typical of the best period of our tormal gardening school. The taste for this went out by the middle of the eighteenth century, and the so-called landscape school of "Capability" Brown destroyed the large majority of examples. With the nineteenth continy there began a revival of formal methods, but the full taste for gardening, both formal and natural, did not develop till the century drew to a close. Within the last twenty five years many very important gar dens had been Laid out by leading English architects. Athelhampton, Hestercombe, East on Lodge were examples, but equally good of their kind were innumerable small gardens laid out by architects and also amateur gar-The art was at its zenith and in den lovers or thoroughly wholesome state when the war broke out, and it was to be hoped that so humanising an influence will not receive a per-

The painted glass was sold to the management of St. Margaret's in 1758.

The Author of St. Margaret's in 1758.

The author of the harmonious arrangement of the management of the transmission of the first of the state of the first of the state of the first of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of

which had since been dissolved. The lowest tender of those since obtained was that of Mr Samuel Forguson, Newcastle, amounting to £135,303–15s. 7d., or an increase of £32,892–8s. 11d. on the tender originally accepted, whilst the total cost of the scheme, inclusive and anothers is commissions. accepted, whist the total cost of the stability inclusive of architect's commissions, was brought up to £151,400. It having been re-presented to the Local Government Board that some portion of this cost should be borne from Imperial sources, the Local Government Board now offered to bear 20 per cent, of the increased cost of the scheme, exclusive of the cost of streets and sewers, on condition that the scheme was immediately proceeded with, and that munition workers engaged by Messrs, Armstrong, Whitworth and Company were given the preference during the period of the war as tenants and lodgers in the houses to be erected. The committee recommended that this offer be accepted, and that the tender of Mr, Ferguson be accepted. The proposed contribution of the Local Government Board amounted to £27,568, deaving the Council to bear the sum of £6,150 more than they had already voted for the scheme. Sixpence a week increase in the rentals would bring in £900 a year. He thought that for the period of the war the committee would be justified in charging the extra amount. A long discussion ensued, but eventually the report and recommendations were adopted by 39 votes to 15.

Mr. John Atkinson, Assoc, M.I.C.E., the borough surveyor of Stockport, has just admitted to the corporation his twenty-fifth annual report for the year ended March 51 last. Inclusive of the area of 1,574 acres in Heaton Norris, added to the borough in November, 1913, Stockport has now an area of 7,7050 acres along the property distributed by of 7,059 acres, almost equally divided be tween Lancashire and Cheshire, au estimated population of 126,400, and a rateable value of £585,091. There are 30,020 inhabited houses and shops, 1,165 workshops, factories. and lock-up shops, and 699 uninhabite-houses and shops. The parks and open spaces cover an area of 1224 acres. The total number of plans submitted and approved number of plans submitted and approved during the year was 203, the smallest number for many years past. 252 houses and 120 other buildings were completed during the year, and 130 buildings were in course of erection. The length of new streets and 9-ft, passages opened out was 1,250 yds., and 17 acres of land were absorbed for building operations during the year. A number of improvements and street widenings have been effected or were in progress during the twelve months, including those to Banks Lane, Dualstone Lane, and Warren Lane—now not less than 60 ft. wide, which was estimated to cost £17,300 (Road Board grants of £4,167 were made towards this improvement); Bramhall Lane, to 50 ft. adth.cost £7,780 (Road Board grant £1,500); and a further instalment of High Street widening between St. Petersgate and Lower Hillgate.

"Limes and Cements." by Ernest E. Daneaster, B.Sc. (London, Crosby Lockwood and Son, 5s.), is a useful compilation likely to be of service to beginners. It is based on G. R. Burnell's well-known book, but, of course, with much alteration, necessitated by the immension trides update. by the immense strides made, more especially with regard to the manufacture of Portland cement, since his day. The author seems to expect as much more change in the next twenty years as during the last. He says:— A typical modern Portland cement works bears little resemblance to one of twenty years ago, and the methods of manufacturers and machinery of to-day will be obsolete to-morrow.

At their last meeting the trustees of the National Gallery accepted a number of works from three cources destined for the collection from three cources destined for the collection at Millbank. Mrs. Fernandez presented a penerl portrait of herselt done by Dante Gabriel Rossetti; Mrs. Macloghlin a bronze bust of herself by Mr. Altre I Gilbert; while four pictures, a water colour drawing, and to it dio of hthographs were presented to supplement these above. four just we water colour drawing, and a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.com/drawing.and/a position of https://docs.co

in 1913-14. The first gift of twelve works included examples by Messrs, John Lavery, William Orpen, Charles Shannon, W. W. Russell, Oliver Hall, Ambrose McEvoy, and Gerald Kelly, to the latter of whom a special room has been given at the current exhibition at the Walker Art Gallery, Liverpook, The pictures now added are "An Interior howing a doorway hung with a heavy purple curtain, by Mr. James Pryde; the second of the "Beggarstaff Brothers"; Mr. William Strang's "Bank Holiday," a strongly belief degroup, hung in Gallery X. of the Royal Academy in 1912; Miss Flora Lion's portrait of her mother in black, entitled "The Wheel Fan"; a landscape, "The Path by the River," by Mr. A. D. Peppercorn; and, in water-colour, Mr. A. W. Rich's "Shædeloes Park." In addition there has been accepted a portfolio of coloured lithographs of dramatic war incidents in Belgium, done at the front by Mr. G. Spencer Pryse.

In spite of the war the Pasant Arts Fellowship, whose object is the encouragement of the hand industries of old, and finding a market for the output, has had a successful year, says the third annual report, the number of new members being gratifying. Classes of instruction in pasant arts, spinning, weaving, wood-carving, and so forth, are conducted under the auspices of the parent (the Peasant Arts) society. Miss Kate Sperling, the fellowship's teacher of spinning and weaving, is enthusiastic concerning the results of her first year's work.

The subject of "The Art Annual" (Virtue and Co.) this year is Mr. Henry Woods, R.A., whose Venetian pictures have given pleasure to so many people. Born at Warrington in 1846, Mr. Woods, while still very young, heard the clear call of art, and for timately he was able to respond to it free from any serious interruption. Unlike many British artists he did not "drop into art from some other profession. He began the study of art much in the same way as a young man studies law, medicine, or divinity Art was to be his lifework, not a delightful hobby or a crutch to help to support him in his effort to master some other metier. His diligence and talent won for him a bronze medal in 1857, and a few years later he came to London with a scholarship from South Ken sington. His draughtsmanship grew sure and strong, while he developed a distinct apprestrong, while he developed a distinct appreciation of character, Mr. Woods soon became known as an illustrator, and his subsequent career shows how much benefit he derived from his early training in connection with magazines and novels. This illustrated story of his life and achievements is told by Mr. James Greig.

Cardinal Bourne on Saturday laid the foundation stone of the new Roman Catholic Church of the Blessed Sacrament, which is being built in Copenhagen Street, Caledonian Road. The founder of the church, Commendatore Hicks, has given the site, church, presbytery, and parish hall.

---

The Archdeacon of Winchester, on Saturday, laid the foundation-stone of a new church which is to be built at Rudmore, Portsmouth, by the Winchester College Mission, at a cost of some £12.000, the total expenditure, including furnishing, being £18,000. Of this sum £15,000 has already been obtained.

The church of St. Bartholomew, St. Paneras, N.W., built in 1800, is now in a bad state of repair. There is extensive dry rot in the woodwork, and the rain penetrates through the main roof. It is proposed to renovate the structure from plans by Mr. F. C. Eden, of Gray's Inn Square, the estimate only being £1,760.

At the annual meeting of the Court of Governors of the National Museum of Wales at Cardiff on Saturday, it was stated that the position of the building fund caused anxiety, £54,000 was due to contractors, etc., to meet which £21,150 was available, leaving £32,850 to be raised. If half could be obtained from local sources the Treasury would provide the remainder. There was no power to stop or suspend building under the contract, and there was the possibility of a loss of £10,000 to £20,000 and the difficulty of a new contract to face. The architects are Messrs, Smith and Brewer, whose design, selected in competition, was illustrated by plans and elevation in our issue of January 5, 1912.

### CHIDS

New premises which have been built in Union Street. Larkhall, N.B., by the Larkhall Victualling Society have been formally opened. The architect was Mr. Win. Baird, Main Street. Bellshill, and the cost will be fully £4,000.

A church of St. Thomas is to be built in the mining district of Maesyewinner, in the parish of Fleir de Lys, Mon. It will be scatted for 500 persons, and is estimated to cost £5,170. The architects are Messrs. H. G. and P. V. Jones, of Hengoed.

Alderman Archibald D. Dawnay, the principal of the well-known engineering and steel works at Bittersea and Cardiff, has been offered and has accepted the mayoralty of the metropolitan borough of Waindsworth for the eighth year in succession.

Mr Herbert Thomas Scoble, of The Dell, Twyford, near Winchester, and of Victoria Street, S.W., consulting engineer and surveyor, who was accidentally killed by a fall from the cliff at Bude, Cornwall, on August 24 last, left estate of the value of £6,501.

The new Spa sewage disposal works at Ossett, completed for the corporation at a cost of £11,859, were formally opened recently. The works were designed and carried out by the borough surveyor, Mr. H. Holmes, with direct labour.

At Shocburyness yesterday (Tuesday), Mr. R. H. Bicknell, an inspector under the Local Government Board, held an inquiry as to an application from the urban district council for sanction to borrow £2,000 for the enlargement of a sewage tank.

The city council of Gloucester resolved on Wednesday to apply to the Local Government Board for sanction to borrow a sum not exceeding £25,000 for providing the required highersion generating plant, and also for defraying the cost of providing and laying special mains recently laid down.

The meeting-place and hour for the delivery of the Chadwick public lecture by Mr. Alfred Saxon Suell on Wednesday next have been altered. It will be given at the Royal School of Medicine, I. Wimpole Street, W., at 5.15 p.m.; the subject as already announced, is "Emergency Military Hespital Construction."

The Markets Department of the Manchester Corporation opened on Thursday two new rooms for cold storage, situated just under the wholesale lish market at Smithfield. They were designed by the city architect, Mr. II, Price, and add 25,730 cubic feet to the cold storage department, raising the total to 105,880 cubic feet.

At a cost of about £3,000, the Sleaford Urban District Council has provided a new water supply for the Ewerby district, and on Tuesday last the Earl of Winchilsea formally opened the water-tower and started the pumping-engines. The water is drawn from a bore on Evedon Hill, the site of which was given by Lord Winchilsea.

The new Roman Catholic church at Batley Carr, which was opened a few days ago by the Bishop of Leeds, will accommodate 320 people. It has been erected, at a cost of £1,752, from the plans of Mr. Edwin Simpson, architect, Manninghun, Bradford, It supersedles a school-chapel, which will now be used exclusively as a school.

Having accepted a commission in the Royal Engineers, Mr. F. O. Kirliv, the borough engineer of Donerster, his resigned his position as hon, secretary to the North-Eastern District of the Institution of Municipal and County Engineers, Mr. W. E. H. Burton, of Wakefield, has been appointed as acting-secretary during Mr. Kirliy's absence.

Extensions to the Girls' Industrial Home, Ipswich, which have been opened by the Bishop of Suffolk, comprise a large entrance hall, with matron's office, heard-room, staff-room, store-room, class and sewing-room, schoolroom, three domitories, staff bedrooms, and bath-room with four baths. Mr. Henry J. Wright, M.S.A., of Museum Street, Ipswich, is the architect.

The funeral of Mr. John Coates, formerly a well-known builder and contractor in Rochdale, who died on Sunday in last week, in his 76th year, at his residence, 400, Shawelough Road, Lowerfold, took place at the Rochdale Cemetery on Wednesday. In addition to the family mourners, a deputation, consisting of Alderman Taylor, Mr. T. Elvyn Kershaw (secretary), Mr. John Fountain, and Mr. Joseph Whitchead, attended, representing the Rochdale House and Estate Company, of which Mr. Coates was vice-chairman.

The urban district council of Epson have approved plans submitted by Messes. Softi-Smith and Munro, of Lincoln's Inn Fields, Orthogonal Chases trustees, for thirty cottages it Hotton-Hill to be built by Messes, H. and F. R. II.

Having considered the question solely from the point of view of special war requirements, the Treasury have decided to grant the application for a loan for the erection of a hundred houses at Letchworth to accommodate the big ieffax of Belgian workers.

Following Sir George Frampion's generous offer to execute as a labour of feige a statue of the late Miss Edith Cavell, judicially morslered by the Germans in Brussels, Mr. Henry Holiday offers to contribute the cartoon for a stained glass window. As he felicitously aggests, the appropriate place for such a memorial would be Norwich Cathedral.

St. Peter's Church, Whitstable, or which the chancel was built in 1903 from plans by Mi-G. H. Fellowes Prynne, F.R.I B V. is about to be completed by the addition of a taxe, on a less expensive scale than was originally proposed, from the same architect's designs. The nave will provide 437 scats, making in all 513 and is expected to cost £4,000.

The funeral rook place on Wednesday in Warriston Cemetery, Edinburgh, of Mr. Robert Ferguson Laing, partner of the furn of Laing and Thorburn, slate merchants. Quality Lane, Leith, Mr. Laing, who was sixty-one years of age, and unmarried, succumbed to an illness which has seriously affected him for several months past.

The standing joint committee of Renfrew-shire have completed the erection of new police buildings at Giffnock, to serve the eastern division of the country. The scheme, which was rendered necessary by the inclusion of a large part of the county area within the boundaries of Glasgow, cost between £5,000 and £6,000. The Count Hall was used for the first time of Friday.

Plans were recently passed by Dunfermline Dean of Guild Court in connection with extensions at the Carnegie Swimming Baths. The alterations involve the demolition of several small dwelling-houses in Campbell Street. The Carnegie Dunfermline Trust decided on Friday to delay proceeding with the extension meantime in view of the scarcity of dwelling-houses in the town.

Mr. John Hunter, managing director of the firm of Glasgow engineers and contractors, Sh William Arrol and Co., Ltd., has resigned his seat on the board of directors of that company, and has accepted the invitation of the Minister of Munitions to become Director of Factory Construction, in connection with the National Projectile Factories now being elected in various parts of the country.

A postmen's office in Kuk Street, Leith, built by H.M. Office of Works, Edinburgh, was opened on Saturday. Constructed of buck, with stone facings, the building consists of one story, and comprises a large half, with inspector's office and other aparaments. The half, which is 65 ft, long and 48 ft, wide, has a girdered roof, and is well lighted. Messis, Scott and Brown, Edinburgh, were the builders.

At a meeting of the executive of the Lord Roberts Memorial Commutee, held in the City Chambers, Glasgow, on Wednesday, it was stated that the work in connection with the statue, which is to be a replica of the equestrian statue at Calcutta by the late Henry Bates, R.A., was nearing completion. In connection with the question of a site, it was decided to make representation to Glaszow Corporation on the subject.

The old timber Ackingford Bridge, carrying the Epping and Chelmsford main road over Cripsey Brook, near Ongar, has just been reconstructed for the Essex County Conned in ferro-concrete. The new birdge, designed by Mr. Percy J. Sheldon, M. Just C.E., the county surveyor, and carried out by Messes J. Gairett and Son, of London, is 31 ft, between purapets, whereas the prior structure was only 14 ft, wide, involving a serious nurrowing of the roadway and a suppression of footpaths.

Last week the Bishop of Chichester attended at St. Leonard's Church, Turner's Hill, and dedicated a side chapel, which has been titted up as a memorial to the late Rev. C. R. Blaker, the first Vicar of the parish. Its east window has figures of St. Augustine of Canterbury and St. Richard of Chichester, whose respective faces reproduce those of Mr. Blaker and Bishop Durnford (who consecrated the edifice in 1895). Windows in the north aisle, in memory of members of the Martin family, were dedicated at the same service.

The momental takes the form of oak panelling around the cast end of the north aske of the contribution. cool. The work has been carried out by Messis Riph Hidley and Sons, from the dession of Mi W. H. Wood, F.R.L.B.A., both firms of Newcastle.

The found-tion stone of the new Bethesila shoo, (nap)d in Langer and Cavendish Roads Felixstove, was laid on Wednesday. Mr. R. J. Girling survey at of Felixstowe, prepared the plans, and Mr. W. F. Cross is the builder. pairs, and All, W. P. Cross is the builder. The school-chapel will be one story in height, built of red brick, with stone dressings, and with millioned windows of Cothic character. The large room will be 52 ft, by 23 ft, 6 in, with a wood block floor. At the end are two small class rooms.

### TO ARMS!

### 4th Battalion ("Architects") Central London Regiment Volunteers.

Recruits are inigently needed for the Regulars, Territorials, and Volunteers. Intending Recruits should apply to Battalton Headquarters, where they will be advised as to the branch of the service for which they are best snated.

ORDERS TOR THE WEEK BY LIEUTENANT-COLOMEL A. W. WARDEN.

COMMITTEE MEETING.

A meeting of the Civil and Military Committee will be held this evening (Wednesday), at 7.15, at the Officers' Mess, Chester House, Eccleston Place, 8.W. A full attendance is requested.

GENERAL PARADE.
Saturday, (th inst., at Drill Headquarters, Chester House, 3 p.in., for drill and bridging instruction. Uniform parade. Full attendance is particularly requested.

### ENTRUNCHING PARADE

Sunday next, 7th mst., at Victoria Station, L.B. and S.C. Railway indicator board, 8.55 a.m. sharp. Uniform, haversacks, and water bottles. Midday rations to be carried. Return to town about 6.40. Railway vonchers will be provided and special train will be run by the railway company.

special train will be run by the railway company.

DRILLS AND PARADES.

"A" Company, Tuesdays, immature range, Gas Light and Coke Co.'s premises, Monck Street, Westmunster, 6 to 8.30 p.in.
Wednesdays, Company parades for drill and technical instruction, 5.15 to 7.15 and 6.15 to 8.15, at Chester House. See Orders from Acting Battation Signalling Sergeant Chesile.

Cheadle, "B" Company, Miniature range and company parades as for "A" Company. See orders at local headquarters.

headquarters,
"C" Company, See orders local headquarters,
Payilion A.A. Athletic Ground, Boreham Wood,
"D" Company, Platoon and section drill at
Chester House, Tue-days and Thursdays, 6.45 p.m.
Company parades, for drill and technical instruction, Wednesdays, as for "A" Company.

bon, wednesdays, as for "A Company.

SCHOOL OF ARMS.

Drill Headquarters, Chester House. Instruction in bayonet fighting, gymnastics, physical drill, boxing, and single-sticks, on Tuesdays from 6 to 8 p.in.

RECRUIT DRILLS.

"A and "B Companies, Chester House, 6.15 to 7.15 and 7.15 to 8.15, Mondays and Fridays.

"C" Company, Boucham Wood and Elstree District. Headquarters, A.A. Athletic Ground, Borcham Wood, For full particulars, apply to Alan Potter, Grey Gables, Borcham Wood, Herts.

"B" Company, Chester House, Tuesdays and Thursdays, 6.45 p.m.

NOTE.—For the present the School of Arms and Recruit Drills will be held jointly with the Engineering Institutions V.T.C.

By order,

L. R. GUTHRIE, Adjutant.

BATIALION HEADQUARTERS,

### WAR SERVICE FOR ALL.

The appeal of the Architects' War Committee, which we print this week, is a trumpet-call we desire to echo to the best of our ability. Not one reader who is not already on active service should fail to respond to it instantly. Lord Derby approves of it, and the War Office can hardly fail to take advantage of our respouse if that is prompt, complete, and

pertinent.

As all readers know, lists compiled by the various architectural bodies show that at least 1,800 members of the profession are serving either as officers, noncommissioned officers, or privates. It is probable that this figure falls far short of the real number, as there is great difficulty in tracing members. According to the census, there are between 7,000 and 10,000 architects in the United King-Probably both figures include dom. assistants.

The work of architects being of an intellectual character, and a great number being of the officer class, it seems to the War Committee desirable to classify members of the profession so that those who are suitable should receive commis sions, and others who have the technical knowledge useful in various special branches in which their experience and technical training can be applied to assist the country should be advised which to join.

Hitherto it has been-and, in fact, it still is-difficult to obtain information of vacancies. Frequently such information has reached the Committee too late to do more than make one or two recommendations. From experience gained in filling such vacancies there is reason to believe that if complete lists, properly classified, were in hand, the Committee would be in a position not only to obtain more and better information, but the waste of men joining the Army from the profession could be to a great extent prevented, and the special knowledge passessed by architects could be directed into the proper channel and be used to its full extent. For instance, inquiries can be made in each district of commanding officers (to whom to some extent selection of officers is now delegated) to ascertain what vacancies they have or are likely to have, and to keep them informed of men whose names are on the list, and whom the Selection Committee, having interviewed, can recommend. It is found

time. From the results obtained the Committee are hopeful that, if now published as a general and official appeal from the War Committee and supported by the technical Press, it will be not only the greatest effort which the profession can make in the direction of National War Service, but also may be the means of finding suitable military employment for a large number of the profession of military age who have not yet joined the

It has been suggested by the War Committee that we should publish the Information Form in place of one of our double illustrations, so that it will reach not only architects, but also members of the building trade. The Committee also express a hope that, as applicants are advised to keep a copy of the form sent in, they will buy two copies of this issue, although forms can be obtained at the Royal Institution of British Architects, the Society of Architects, the Architectural Association, and the allied societies.

The forms are based partly on Army Forms for Appointment of Officers to Temporary Commissions and Army Forms for Appointment of Officers to Territorial Forces. The information is directed to meet points which from experience we have found are required by applicants or necessary in order to make recommendations for appointment. The Committee also hope by means of these forms to be able to assist architects who enlisted early in the war to get promotion, which for some reason or other professional men do not get, although the promise was held out to them on joining that suitable men would be promoted from the ranks

We may remind all that no offers of anything but whole-time service, anywhere, at home or abroad, can be considered. All applicants obtaining ap-pointments will receive the ordinary pay attached thereto by the War Office other authority concerned. Men thus rendering war service cannot expect to receive pay of a greater amount than would provide for the bare maintenance of the families of members of the professional classes, and it is unlikely that any appointments will be made at higher rates of pay for junior commissioned ranks than from seven shillings to four teen shillings a day, with certain allowances, except in rare instances in connection with which exceptional knowledge and qualifications will be indispensable.

For all ordinary work the technical

interviewed, can recommend. It is found that the information in the National Register, although perhaps useful as a general guide, is not sufficient in the case of a profession of such versatile attainments and experience as that of architects, and fuller detail is essential.

The scheme has been working in a small unofficial and tentative way for some

Mechanical Transport, Army Sorvice Corps, Army Ordnance Corps, etc., they can hardly fail to render good service.

Expert knowledge of surveying, mapreading, use of the prismatic compass, sketching, ground and water works, roadmaking, repairs, timbering, scaffolding, and rough temporary work of all kinds will be most valuable. Mere routine and ordinary practice, particularly domestic and school work, will only be of service as far as construction is concerned. Know-ledge of country pursuits, such as riding, shooting, and boating, will be advantageous, as also experience in forestry, rough timber, and underwoods, land dramage, horses, cattle, and ment. For inspectors of factories and works special knowledge of the processes of manufacture of iron, steel, canvas, paint, textile fabrics, all kinds of food, and of methods of conversion of all raw material into the necessaries of life, or means of destruction by explosion or fire, is wanted.

The Information Form we give elsewhere must be filled in, signed, and sent in at once to any one of the following centres which is most convenient to the applicant to be subsequently interviewed at. The envelope must be marked "W.S." on the top left-hand corner, and must be addressed to the secretary at that centre, as must all subsequent correspondence till the applicant is informed that he has been placed on a selected list, when further correspondence should be addressed to the London Centre.

### THE VALUATION STAFF.

leaving this part of my address uld like to say how greatly the difficulties connection with the Land Valuation have been cased by the fact that so many of the Vilhatian Staff. I believe something like one thousand men possessed the Institution qualifications. They have been imbued with our professional feeling, and were able to meet and discuss questions with surveyors in private practice in a spirit of mutual in deistanding and freedom which could not stierwise have existed. It is pleasant to think, that even in the face of the great changes which are being made, the future administration of the department by the established staff will be in the hands of men assequable attor for office is their membership of our body.

### WAR AND OUR WORK.

I now turn to the second part of my others the main points in which, the effects of the war and the resusing legislation, iffect our work is surveyors.

The conservation and augmentation of our home produced food supplies were naturally among the first of the national requirements to which the attention of Parliament was directed, and a number of statutes having this object were passed in the early days of the war (4 and 5 Geo, V., cap. 26, enabling to d. forage, and stores for his Majesty's Forces to be requisitioned in case of emer-gency, passed August 7, 1914; cap. 51, enabling the Beard of Trade during the period of the present war to take possession of foodstuffs unreasonably withheld, and cap. 75 of the following year, anthorising the regu lation and restriction by order of the Board of Agriculture of the slaughter of animals used for food, passed August 31, 1915.

In July of the present year it was found necessary to amend this measure by Act to make provision for securing the main tenance of a sufficient stock of cattle, sheep, and swine, and for purposes connected there with 5 and 6 Geo, V., cap. 65. This Act extended and defined more accurately the power of the Board of Agriculture to prohalat or restrict the sale of animals, except male calves, and the sale, or exposure for sale, of the mest of immature animals.

### REAL PROPERTY AND ITS OBLIGATIONS

More important perhaps from the surveyor point of view, however, are the provisions of the Deteror of the Realm Consol dation Act the Seed of November 27, 1914, and the regulations of the consolidation of the Provisions as ctug test property generally and its and I propose first to refer, and then to easily the main kindred provisions or to shoth the monoton to all a critics times

It may be said. I think, generally speaking, 19. 2 1 then has reaching operation the recent to the one exceed anything that has gone more, as indeed from the extreme gravity to the times and the modern conditions was to be appeted. We shall, however, also see to to they are not so drastic in their effect ages the individual owners affected as were prices one of the first enactment of the

But subset only to this declaration If general is resplie, the competent mixal or bulwarks, braies, walls, ditches, and all other fortifications for the same, and that attracted by him, is authorised, where for every mayor and constable appointed by the

the purpose of securing public safety in the defence of the realm it is necessary : to take possession of land, to construct mulitary works (including roads, thereon, to remove the and fences, to take possession of buildings or other property, to place buildings in a state of defence, to cruse buildings to be destroyed. or property to be removed or destroyed, and to do any act involving interference with private rights of property necessary for the defence of the realm. Power is also given to the like anthorities to use land for the training of his Majesty's Forces, and to stop up roads. And so far no provision is made for compensation, as to which therefore no claim as of right would presumably lie against the Crown. But this matter has not been overlooked, and a Royal Commission of Inquity, dated March 31, 1915, has been issued appointing Mr. Henry Edward Duke, K.C., and Sir James Thomas Woodhouse, and Sir Matthew Yemmill Wallace to inquire and determine and to report what sums in cases not otherwise provided for ought in reason and fairness to be paid out of the public fund- to applicants (not being subjects of any enemy State) who are resident or carrying on business in the United Kingdom, in respect of direct and substantial loss incurred and damage sustained by them by reason of interierence with their property or business in the United Kingdom through the exercise by the Crown of its rights and duties in the defence of the realm. Thus it is to be noted compensation is not of right but of grace, but I am sure we may all feel that individual property owners who may be affected will be fairly treated by this tribunal and the Crown.

These provisions are, as I have said, both drastic and far-reaching, but I think we shall all agree that they are quite necessary and proper, and may be said to have their foundation in the ancient common law prerogative of temporarily occupying and using the property of a subject—a right that has been emphasised by the Master of the Rolls in a recent case, in which he accepted as authoritative its expression in an old state-ment of the law to the effect that "When enemies come against the realm to the sea coast it is lawful to come upon any land adjoining the sea coast to make trenches or bulwarks for the defence of the realm, for every subject hath benefit by it."

This, after all, when one comes to think about it, is but a declaration to which surely all will subscribe, that the needs of the realm are to be and must be the paramount consideration, else our rights and our privileges cannot be maintained or be of value.

### FORMER LEGISLATION.

In this respect it is especially interesting to turn to the first statute bearing on the operation passed in the year 1512, 4 Hen. VIII., cap. 1, in circumstances and for reasons in striking contrast to the present, yet in words which, with little alteration and extension, would be quite appropriate to-day. venture to quote them. They are as follows :-

For as much as the Land of Bretayne (Brittany) and also the haven of Brest lyth streight against the South Secrestes of the Countre of Cornwall, and that the French oar anneient enemyes and Bretaynes enemyes by reason of their fyshing upon the secretic showe as well every haven and creke within the said Countre as every landying place in as latte maner as any subject of our Sovereign Lors the King dooth and that the said Countre is three-soore and ten myle in length and the substance thereof right little more than six myle in breite from the southese to the Vorthsee by reason win real they also knowe that grete multitude of people can not shortly resort to put they most after their landying places nother pile blokhouse ne Bulwork is made to greve or annoye theym at their landying which considerations unto our sayd enemyes grete code the confort and corage giveth to arrive and land in the same parties to the grete annoyance of our said Sovereign Lords subjust there and to the utterly undoying of divers and many of theym confes

This statute, which was to endure to the following Parliament, went on to enact that the justices of the peace and sheriffs should survey the county from Plymonth to Land's End, and appoint towns and parishes to make bulwarks, braies, walls, ditches, and all other fortifications for the same, and that

justices and sheriff were to command all the inhabitants within the precincts of their office to be at the seaside with such instruments as they had or could get for making such works, under penalty of not exceeding ten days' imprisonment, without bail; and there were similar provisions as to landing places in other parts of the realm. This, 13 may be said, was a kind of "national serwith a vengeance, as by it personal service was commandeered, subject penalty and without reward, and it went on further, you will be interested to hear, to provide a power "to enter upon every man's ground, of what estate or degree he be of, and also to dig for and take materials for the said works, and this expressly without any manner of payment to be demanded, or any minner of action to be attempted in respect thereof."

After this, I understand, there were a number of statutes passed, as, in fact, there have constantly been right up to recent times. with the object of enabling the State to acquire specific lands for special purposes.

The earliest statute of the kind was passed in 1708, in the reign of Queen Anne, and between that time and the year 1803, to which I shall next refer, twenty-eight of such

statutes were passed.

The chief point of interest for us in these statutes is that, generally speaking, in those up to 1845, when the Lands Clauses act, with which you are all familiar, was passed, the lands in question, "to the end that the true and real value of the estates may be ascertained and the owners and proprietors thereof may have just and reasonable satis faction.' were vested in trustees in trust for the owners until compensation should be paid, and thenceforth in trust for the Crown. and commissioners were appointed to decide claims. Owners, if they wished, could have compensation settled by a jury to be sum moned by the sheriff upon warrant from the commissioners—a provision which may be said to be the forerunner, as it were, of the procedure under the Lands Clauses Act, and which, since it passed, has usually been in-corporated with the Acts in question.

THE THREATENED NAPOLEONIC INVASION.

At the beginning of the nineteenth century. however, as you will remember, there was the great impetus due to the apprehension of invasion by Napoleon, and we come to what may be said to be the first of the statutes of general application, which later came to be called Defence Acts. It is the statute of 43 Geo. III., cap 55, passed in the year 1893, and contains words which, on the authority of the present Master of the Rolls. contain a plain assertion of the prerogative right in its recital that "It is expedient that his Majesty should be enabled to exer cise in the most effectual manner the powers by law vested in him for preventing and repelling an invasion of the United King dom by his Majesty's enemies, and that for such purposes provision should be made . to enable his Majesty to provide grow Majesty to provide grounds which may be wanting for encamping his Majesty's armies and for erecting batteries beacons, and other works which may be recessary for the public service; and also to provide for the indemnity (in certain cases of persons who may suffer in their property by measures which may be taken for the defence and security of the country and annoyance of the enemy."

It then (among other matters), in case of

actual or apprehended invasion, empowers the Crown to authorise county lieutenants, upon request from the military authorities. to order the removal or appropriation of any thing which might be useful to the enemy or applicable to the public service, and in case of necessity to remove, destroy, or render use-less any house, mill, bridge, or other building or any matter or thing whatsoever and generally to do and act in the premises as the public service and the exigencies of particular cases should require. General officers were also authorised to survey and mark out any land required for the public service, and to treat and agree with the owners for the pos session or use thereof during such time as the exigencies of the service should require. No lands, however, were to be taken without the

consent of the owners unless "the necessity" were certified by the lord-lieutenant or two deputy-lieutenants, or unless an enemy had actually invaded the kingdom. If no agreement were arrived at two justices . might be required to give immediate posses sion by means of a warrant addressed to the sheriff. As to compensation in the case of houses, etc. destroyed, the Treasury were to appoint persons to assess compensation, and it their figure was not accepted, two justices might be called upon to settle an amount; while in the case of lands taken, two justices or two deputy-lieutenants were to issue a warrant to the sheriff to summon before them a jury to decide claims and settle compensation. is to be noted that this statute appears only to have contemplated temporary use of land during an emergency,

In the next year a further statute was passed providing for absolute purchase of linds, but with substantially the same restric-Finds, but with substantiany the same reservation on compulsion, substituting, however, "expediency" for "necessity," and in case of no agreement possession of lands could only be obtained if owners failed for fourteen days to accept what was offered to them. while in the matter of compensation an appeal from the decision of the jury was given to either side to bring the verdict before the Court of Exchequer for consideration, which Court might direct a common or special jury to be summoned for the next assizes to re try the matter before a judge, this second verdict being final.

There was a further amending Act in 1809 of no great importance. Then, after a period in which a number of minor Acts, which are mainly special Acts for particular purposes of the kind to which I have already referred, or "vesting" statutes, we come to the or "vesting" statutes, we come to the Defence Act of 1842. This was chiefly a Con-solid tring Act, and, so far as I can ascertain, established no tresh precedent of interest to surveyors, its provisions in this regard being the Acts of 1803 and 1804, with which I have just been dealing, including the provisions for the protection of the owner to which I have already called attention, viz., consent save in exceptional cases, and a period of fourteen days for consideration as to whether the owner would accept the quantum of compensation after the same had icen offered on behalf of the Crown.

### LATER DEFENCE ACTS.

This Act, and other Acts amending it, or passed with like objects, and which raise no points of interest to us surveyors that lave not already been covered, are known as the Defence Acts, 1842 to 1875. But it should be mentioned that in an Act passed in 1891 (the Ringes Act. 1891) it was provided that when any land was acquired under the Defence Acts the person, or authority acquiring it. may require the amount of compensation to

settled by arbitration instead of by jury. In one of the Defence Acts (passed in 1860) may be of interest to you to know that I found what in a sense may be called a provision for betterment in the case of probibi-tion against building upon a man's land, the tribunal being required to consider whether the agricultural value of the land affected has increased by drainage works carried out by the Secretary of State, or whether its available area was increased by the removal of hedges or ditches, and to take the same into

There were also in force in August, 1914, four measures known as the Military Land Acts. 1891 to 1903, for facilitating the acquisirich to 1930, for accintating the acquisi-tion or control of lands for various military or naval purposes, and the Military Man en-vres Acts, 1897 and 1911, but these, generally speaking, seem to have followed the lines of the Lands Clauses Acts as to acquisition of lands and compensation, and it does not seem to me necessary to do more chan inst refer to them.

Summarising these provisions as a whole we see that in the earliest days there was no provision whatever for compensation; that later came a period during which the Crown was subject to definite provisions and restrictions for the protection of owners as to compensation similar to, or the same as, those in the case of the compulsory acquisition of lieutenant Réserviste under lands by subjects entrusted by Parliament the Croix Reage Français at the Hôpital with such powers. And lastly the marker d'Arc-en-Barrois, in the Argonne District.

is now dealt with under Statutory Regulations in which, save so far as may be gona-tained in a general declaration of principle that interference should be limited to necessity, there is no provision or restriction in tayour of owners, nor for payment of com-pensation as of right. Provision, however, has been made for such payment as of grace, the amount to be determined by a Royal Commission specially appointed to dea, fairly and reasonably with the matter.

Exercise of the powers conferred by these Acts of Parliament have necessitated calling in of surveyors thoughout the whole country, and thus provided work at a time when it has been most opportune and accept-

able to the profession.

And now, gentlemen, the most important national problem and duty of to-day is for each and all of us to put asile every personal consideration, and to devote our consideration, and to devote our landing energies in whatever way may be nearest to our hand towards helping to bring this war to a successful and speedy termination with the full and deliberate determination that its conclusion must rest upon ferms that will secure to our children a reasonable prospect of lasting peace, so that they may devote their asing peace, so that they may devote their thoughts and energies to the development of the many social problems and the improve-ment of the condition of life for the com-munity generally which this war has leterrupted.

### THE LONDON COUNTY COUNCIL

At the meeting of the London County Council yesterday Tuesday the Education Committee submitted a report re-ommending a reduction in the estimates for the current financial year of a net sum of £360,225.
This included savings of £71,590 on painting and cleaming (nearly half the estimated amounts). £31,340 on buildings and furniture not chargeable to capital account, £26.520 on repairs to buildings, and £6,990 on furni-

The Establishment Committee reported that Mr. W. A. Green, a senior assistant in the estates and valuation department, will the estates and valuation department, with attain the age of sixty-five years on the 15th inst. They recommended that, as his retirement from the sorvice at the present juncture would cause inconvenience to the Council's service. Mr. Green be tetain d up to and including November 15, 1916, or the conclusion of the war, whichever is the earlier date. They further resonant led that leave of absence without pay be pointed to Mr. B. G. Amey and Mr. L. H. Useke and Mr. 4 Trenaman and Mr. 4 Quilter, assistant foremen and inspective of furniture and timber on the classification. in the Stores Department, in order  $\mathcal{C}(\mathcal{C})$ may undertake war contract work

The Local Government Committee r ported that they had considered the question of the desirableness of sinking a well for the supply of water to the new sessions house at New-ington. Apart from practical lifeculties, there were several objections to the responsal. Having considered the matter in all 's bearings, the committee decided that " would be undesirable for a well to be sun't at the sessions house, and that the most satisfactory method of dealing with the wat r supply would be to arrange for a combin 1 system of mains for the purpose of general surply of mains for the purpose of general strong and fire hydrant service. The concurrence of the Finance Committee, they have in local of the architect to issue from time to be not correctly tificates for advances to the contractors for the erection of the new sessions bouse to an extent not exceeding 50 per cent of the value of materials which are really for manager in the building, such alvances to be made generally on account of the court of an without prejudice to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and object to any liabilities and obj gations of the contractors. The accounts will be adjusted from time to time as the work The accounts will proceeds, and the issue of the certificatis will be subject to the contractors complying with such conditions as may be prescribed

were two parallel rows of thirty beds with a central passage. The sun blinds kept out run when let down vertically, but had the The sun blinds kept out great disadvantage of flapping at irregular intervals. The beds as supplied by the Government were cheap, old tashioned, and tar too low for the convenience of masseurs. The ideal height for a hospital bed was 26 in. from floor to iron framework. Mattresses should be of hair, with square sides, and piping at the edges to prevent flattening out. It was talse economy to provide too cheap a bod. Close to the kead of each bod was the regulation Army locker; as flowers stood on these and in hanging baskets, many wards looked like a horticultural show. The lighting was by electricity. Every ward of sixty beds had three bathrooms, a washing place has insee bathrooms, a washing place with basins, a linen capboard, a paintry, and a kitchen. Attached to the wards were other buildings not necessarily open to the air. One range, on the east side, 280 ft, long, con tained the pathological laboratory, a room for electric massaging, officers' mess room, receiving from, post office, clerks' room, linen stores, and other storerooms, and apartments for the other commanding, the matron, the dentist, the registrar and C.V.O.T.C. Then behind this on the cist side was the patients' room to the north, and recreation room 101 ft. long, while to the north-west of the wards was a still larger room for the R.A.M.C. orderly men, and another provided a R.A.M.C. orderly men, and another provincer a domitory for 176 orderlies. The kitchen block is 108 ft. long, and similar in height to the wards. The operating theatre was at first 61 ft. by 23 ft., 14 ft. high to sides and 18 ft. 6 in, to edge, but has since been doubled in size, the mathematical matter, wear fluished with The walls and ceilings were finished with granite plaster and distempered, and the floors were covered with limbeum, the skirting flours were covered with finoleum, the skirting being splayed. It was lighted from above and from the north. The heating apparatus for the central heating and hot water supply was divided into two sections with duplicate boilers to each sections. The scheme sections with approximation points to cache sections coupled up to calorifiers. The schem, of the hospital and its plan were thought ant many years ago by Dr. Joseph Griffith. The buildings were designed and superintended during election by Mr. C. F. Skipper, of St. Andrew's Street. Cambridge, who has since planned many similar hospitals in other towns. Mesers. A. Negus and Son. Regent Street. Cambridge, were the builders; the electric light installation was by the Cambridge Williams. Smally Co. the heating installation ant many years ago by Dr. Joseph Griffith. electric light installation was by the Cambridge Electric Supply Co.: the heating installation by Messrs, F. A. Norris and Co., St. Andrew's Hill, Queen Victoria Street, E.C. and the cooking apparatus in the kitchens by the Cambridge Cos. Co. The cost has been astonishingly low. The expense, which in a scomitry hospital worked out at about £200 a bod and may formly institution at between bed, and in a London institution at between £300 and £400 a bed, and even more, was only about £20 per bed for the first section of 520 beds, and £16 17s. 6d, for the entire establishment of 1.700 beds. The open-un treatment showed a great saving in time; there was in most cases no need for a further stay in a stylescent home and the mortality was astonishingly low among the 6.617 patients who Lad been admitted up to the date of the latest published returns. The patients never complaned of suffering from cold, but looked upon the loogital as a paradisc after life in the truckes, but the mirses, who slept else where in closed buildings, were adversely

dto ted by the changes of temperature.

locate hospitals further from populous certres. The tobacco smoke grey of asbestos walls was soothing to the eye, and, as Di Shipley had said, Ruberoid was far preferto galvanised from for a roof covering.

Dr. Brydon, medical officer to the A.A. First Aid Department, seconded the vote of thanks, remarking that he was an old student ander Dr. Shipley. The wards described marked a new epoch in hospital construction, and the opportunity for the innovation hap-pily came to men like Dr. Griffith and Dr. Shipley, who had already advocated openair treatment, and had given much thought to the subject before they had occasion to put their theories into practice. Some day he trusted all the great metropolitan hos pitals would be shifted from the densely peopled localities, with polluted atmosphere, now occupied to the open country.

Mr. W. A. Pite, F.R.I.B A., observed that the sweetness of the air in the Cambridge Eastern Hospital, as compared with that in metropolitan hospitals, was very astonishing, and the results to the patients surely justified the experiment. He was impressed when at Cambridge with the fact that no question was raised by the architect or medical staff as to the number of cubic feet or superficial The lesarea to be allotted to each patient. sons he learned from his visit of inspection were the enormous importance to patients free circulation of fresh air and provision for sunlight penetration.

Dr. Mallon, in supporting the vote of thanks, said it was suggestive that pneumonia and bronchitis existed, not where the weather conditions were wintry, but where the rooms were hot. The nurses suffered from the coll and draughts because they slept in closed bedrooms.

The vote of thanks was cordially accorded, and was acknowledged by Dr. Shipley. 

### HOUSING CONDITIONS AND RENTS IN SCOTLAND.

Lord Hunter and Professor Scott, the Committee appointed by the Secretary for Scot-land to inquire into the circumstances connected with the recent increase in the rentals of small dwelling-houses in the industrial districts of Scotland, having completed investigations in Glasgow, as reported Honse, Aberdeen on Wednesday.

Mr. J. M. Gowan, the city assessor, sub-

mitted a statement with reference to houses coming under the House-Letting Act, which showed that during the past year fewer properties had been vacant, and that there was a further tendency towards decrease in the number of unlet houses for the current year. The increased rental seemed to be greater in

the larger houses.

Mr. J. T. Sorley, the city chamberlain, supplied statistics with reference to the workmen's dwellings erected by the town council. The rents were slightly under those charged for the houses belonging to private owners. No increase in the rents had been made since the outbreak of war.

Parish Conneillor David Milne, speaking on behalf of the Aberdeen Tenants' Association, stated that the increases were from 8 and 10 to 15 per cent on the year's rents, exclusive of rates. If public opinion did not rise against a further increase, it would as-

suredly be imposed.

Mr. J. D. Mackle, advocate, justified the increases which, he said were from 5 to 10 per cent, in the case of the rentals he factored by the rise of the rate of interest on bonds, the insistence of lenders on insurance against aircraft and bombardment risks, and the great augmentation in the price of re-

pairs
Mr. Alexander Ledingham and Mr. J. Jeffrey, the secretary to the House Proprietors' Association, gave similar reasons, the latter adding to them the expense of building. Mr. Ledingham said the standard

rate for repairs was from 12 to 15 per cent.

Mr. David Milne, recalled, said he becked that the figure for repairs had be. overstated.

The Chairman said the Commission would

### LOGIC IN ARCHITECTURE.

BY HARRY GILL, M.S.A. "Our World has passed away In wantonness o erthrown,"

but thanks to the courage and steadtastness of the allied armies, and the devotion and self-sacrifice of the younger members of our Society, another, and let us hope, a more beautiful world will spring "phoenix-hke" from the ashes.

Almost without exception the practice of architecture has been brought to a standstill by the war. It behoves us, therefore, to put this temporary surcease to advantage, and indulge in introspection such as we never could, or should be disposed to do, in the throb of normal times. This uncongenial task has been made all the easier seeing that political and religious controverses have been laid aside for the moment, and we can meet on common ground and speak our minds as comrades and Englishmen sans peur et sans reproche.

peculiar Under these circumstances. "Logic in Architecture appealed to me word logic to mean the "science of reasoning" and architecture the "science of building."

I do not wish to infer that "logic" is the only or even the chief thing an architect should cultivate. When I think of the terrible pass to which the German nation has been brought by their dependence upon "logic" alone, I feel that it is necessary to remind ourselves, paradoxical as it may seem, that we must also have ideals which are often illogical, and we must also foster the spiritual side of our nature, which is often impractical, if we would make a real living success of our work.

But these are great themes of which I can only make passing mention in the limited time at my disposal, and therefore I confine my remarks chiefly to "logic."

Logic has been neglected of late, and we have been prone to follow the dictates of

fashion, a dangerous guide where architecture is concerned; for fashion has led to unsound methods of construction and meaningless arnamentation.

If I criticise adversely the details of recent work, my own as much as any other, you will understand that I speak of the work for the work's sake only, and quite without

any personal motive.

many who commenced their training some fifty years ago, the Gothic revival came as a misfortune; for while I would yield to no one in my admiration for mediaval architecture. I feel that the Gothic revival was a mistake, because it was the revival of the outward forms without a true grasp of the inward spirit.

You have only to look round to see what this has done for us in modern ecclesiastical buildings, and more especially as exhibited in what for the sake of classification only I may call the Dissenting places of worship. how many of these conventicles ought it to be said. Our Church at the front is as fine as an abbey, But seen from the rear 'tis remarkably shabby,' But the gods see everywhere.

Let me repeat that I speak of the material fabric only, and no word of my criticism

applies to individuals or sects.

The Presbyterians, who of all people should be the last to respect images of the saints. have placed over the chief entrance to the place of worship in this district a "little Gothic niche of nicest workmanship." which Gothic niche of nicest workmanship." which looks as though "it once had held the sculptured image of some patron saint looking down on all who entered those religious doors." When age has added its mellowing influence, will future generations believe that the iconoclastic spirit of our time deprived that niche of its occupant? For only on the assumption that it was intended to shelter a sculptured image can such a housing be justified.

If the Presbyterians could be outdone in this direction it would surely be by the Baptists; but the Baptists have put two niches on the front of their new church, which again are meaningless unless intended for statuary.

In old time representations of the saints it was not unusual to depict them in the greatest act of their lives, St. Wilfrid giving treedom to a slave, etc. When this terribe war is to a slave, etc. When this terrible war is nappily over, I suggest that it might be approto make these melies commemorative On the one side we could have St. Lloyd George listributing rare and refreshing fruit to the English, and on the other the same saint devising iron rations for the Germ-huns.

The buildings in which men worship nowadays are indeed a strange study, for do we not find that where faith is supported by appeal to reason, the architectural setting frequently thogical and quite out of har mony with the scheme; but where the appeal is to authority and individual reasoning is discouraged, the architectural setting is logical and designed to give an uplitting in-fluence. So that speaking of course on broad and general lines, we might say that the more logical the crocd the less logical the architecture, when it ought to be vice versa.

I would say to the young architectural scudent, study ancient Cothic architecture by all means, but do not attempt to copy it. Remember that the methods of construction and the materia's at our disposal are not so restricted as they were in the days of old when the craftsman had to choose either oak or stone. Let archaeology be your handmaid if you will, but do not make of it a

When we turn from the modern Gothic to modern Classical architecture, we find the

detals are more thogreal still."

Whatever semblance of reason there may be in purting a key-block in a flat brick arch, it is surely a violation of principle to put a key stone in the centre of a stone head of lintel. And yet this anomaly is a feature of modern design. If you study the brick buildings of the 17th and 18th centuries. will find numerous instances where key-blocks have fallen out owing to settlement of the

jambs or decay of material.

In recent buildings not only are key-blocks introduced in flat lintels, but they project so unduly beyond the face of the wall as to

become dangerous.

In my opinion, such buildings will in years to come be almost as great a menace to human life as Zeppelin bombs are to-day.

A key stone in an arch is a structural necessity, but to use a structural necessity purely as an ornament is quite a different thing to the ornamentation of a structural feature, and there surely can be no justification for treatment which offends against all

laws and rules of common sense.

Consider one of the most important details in Classical architecture—the Column. In the hands of the Greeks, the column was indeed a thing of grace and beauty. I wonder what would happen to the builders who lived B.C. if they could see what we "degenerates" emphemistically call a "rusticated" column.

The grace and dignity of a Grecian column is due to its perfect proportion and the subtlety of its entisis, and yet how often do we see these attributes destroyed by the senseless system which is sometimes adopted senseless system which is sometimes adopted in modern work, of building up a column for part of its height, yea, and sometimes the full height, with alternate drums and cubes, until the graceful lines of taper and the effect of entrsis are entirely obscured.

I am aware that the Queen Anne and Georgian architects who used this abomina-tion claimed that "chiaroscuro" was the effect they aimed at; but if light and shade can be obtained only at the expense of the column, I, for one, would prefer share to shadow, and I think the day is not far distant when our successors will wish to dress down these abortive columns to their true

lines I know a modern building with supposed Doric pilasters at the angles. These pilasters are "rusticated" throughout their full height, so that the taper can be only fitfully seen in the wide sunk joints between each block, while the cap and base have to be searched for before they are seen at all, is commendable.

Although an architect with many years' But we must educate the public taste. We experience. I felt it quite a feather in my must convince men that a house need not

cap when I found out that these were really mtended for pilasters. But will such work cause the public bosom to swell with pride at the prowess of the native genus?

Then, again, what liberties we have taken with the pediment! A broken pediment is claimed by some to be decorative treatment. For internal use, especially, when it is broken to admit a medallion or bust, it may be done with a semblance of reason. then it is a long remove from the sculptured or the Greeks; but to build a tympanum broken pediment with masonry can never be commended,

It surely is topsy-turvy logic to put keystone where it is not needed, either for strength or appearance, and to omit the keystone from a pediment where it is needed, both for strength and appearance. To build both for strength and appearance. a pyramid on its apex would not be more illogical than the attempt to give apparent support to a wide arch by dividing compartments with stone or brick multions.

Why do we perpetrate these things? it not because, without stopping to think for ourselves, we follow "rashion" in architecture? We become imitators of one another testure?

instead of designers.

Our society is fortunate in having a copy of "Stuart and Revett's Antiquities at Athens," and the young architect could wish for no better studies, but they should only be used as the groundwork for a logical adaptation to modern needs.

Another very weak point in modern archi-Another very weak point in more artistic trecture, in my opinion, is the shorn and unfinished appearance of the cornice. A parapet wall, perforated with what one might call the "Union Jack pattern," which is very patriotic, but not pretty, and devoid of any sheltering coping, is very much in fashion just now. To me it gives the impresfashion just now. To me it gives the impression of the man who began to build without first having counted the cost, and who, conse quently, had to leave off abruptly before the full height was reached.

I was taught that the top of a wall should always be protected with a projecting coping, and in such an uncertain climate as ours a projection is a logical necessity, quite apart

from the question of appearance.

some difference of opinion as to There is how far the exterior of a building should reveal the interior arrangement of its com-ponent parts. In any case, I think it is illogical to design an elevation without regard to the plan.

An otherwise satisfactory building not far from here has its chief façade disfigured by he staircase string crossing the hall window. We all know how difficult it is to arrange the various levels of a staircase so as to work harmoniously with a symmetrical design; but to plan a staircase without incorporating it with the design can never be

The other day I had occasion to look over a detached house. By standing immediately in front of it the upper story appeared to be in what is known as the half-timbered style. But the timbering! I asked myself. Is it structural? No. It could not be, for the timbers appeared only on the front face, and not on the returns. It was, therefore, applied art, so I asked myself. Is it decoraive? I think that was the idea the builder had in his mind when he did it, but I could not find one pleasing line in it. The work was altogether illogical, and a sheer waste

This is not a condemnation of any attempt to reproduce the timbered style of building There are some who teach that timber build ings should be restricted to sites where tim-ber abounds, and so on, and there was a time when such a practice was necessary Stone buildings in a stone district. I rick buildings in a clay district, and timber framing where neither stone nor brick was plenti ful has produced some delightful But in these days, when every facility is given for carriage of material from one disct to another, there is not the need to adhere to any traditional manner of build In large towns and industrial centres especially any endeavour to relieve monotony

### PRITISH COLUMBIA TIMBER

We briefly mentioned recently four books to which are being issued by the Government t British Columbia, with the view of directing ome users to the many woods the province in supply, four interesting booklets about er chean be had tree from the Agent General or British Celumbia. Salisbury House, E.C., and further information by writing the Chief Forester. Victoria, British Columbia. We give a few extracts in one of the booklets, convinced that they will interest all conceined at the practical falines four European supplies.

Practically all the forest products at

Practically all the ferest products at present exported by water from British Columbia are from the coast forests. Four socials Donglas fir, western red cedar, western hemiock, and saka or silver sprince make up the bank of the coast timber, and make up the bank of the coast timber, and, therefore, of the experts by water. Four species are pre-emmently useful. There are, however, many other species in the province, such as various punes, balsam firs, larch, Ergelmann, sprace, etc., from which humber is in create total of of the Eastern, prairie, and divisit itially.

Detains fir, western red codar, western fon a and sitka sprine are all grant tim hars. As a 2r up they belong to the world's reset tumber trees, and are, perhaps, the most severely useful woods obtainable in commerical, quantities, over a amount of them over a suitable for practically every use to which wood can be put. Not only is each the largest at its kind existing, but in quality can thus the best of its kind. These are s ient no facts which can be verified in any textbook on the subject.

### DOUGLAS FIR. Pseudotsuga taxifolaa.)

Denglas fir, also known as red fir, yellow fit, Orego, pine, Columbia pine, Douglas spruce, is the most important timber tree on the North American Continent or in the world. No other one species exists in such great individual sizes, such excellence of quality, and si h vastness of quantity over so wide a range. No other one species is so wel. adapted for such a variety of uses. It is the world's "Ail Utility" wood.
It is found from Northern British Columbia

to Mexico, covering a range of over one mil-lice, square miles, and reaches its best deve-lopment on the coast of Southern British columbia. The total quantity of Douglas fir timber is estimated to be greater than that if all the hardwood timber in North America. With the single exception of the sequence of with the single exception of the seque as a California, it is the world's largest timber time. The average height is 15% to 225 ft., with a drameter of 3 to 6 ft. Exceptional trees ten beover 300 ft. in height and 15 ft.

trees tearly over 500 ft, in height and 15 ft, it diameter.

We stern America and one in Asia. Beth are small, is jubby, and semmercially non-lineportant. Douglas fir timber is produced only it Western North America, and the best of it comes from the Pacific Coast. The wood Douglas in see imparatively light, but very secretary to stee seriouses wood in the world that its weight that is obtainable in common or all sizes and quantities. It is moderately light but very light, but very to the stee and quantities. It is moderately light but very to work, straight grained to give a died of air from a fairly soft, fine grained that it is low to make the grained that it is not a pairwer timed. Sow-growth n parrow raized, slow-growth love in diagray thinged, is owegrowth a larder, is areseguated indigited for growing timber. It takes stain our shade or colour. It holds halls that ally impervious to water, and is. When sawed tangentially slash a pair of the wood is shown in a ratio figurary, which makes it very

known as patch or southern pine. and mining timber, heavy frame and strong planking for ships, scows, dredges, railway painting for samps, ecows, drenges, rainway cars, elevators, stage deals, and shores in shipbuilding yards; piling for wharves; spars; these are forms in which Douglas fir gives superb service, for as a structural

m gives supero service, for as a structural timber it is misurpassed.

The enormous beams manufactured by British Columbia sawmills have long been a feature of the export lumber trade of

the province.

Most structural timber becomes gradually air seasoned while in use. Douglas fir increases in strength as it seasons, and has an advantage in this over the patch or yellow pine from the Southern States, in which would the greater resinous content in the southern with the content in the southern with the content in the season with the content in the season with the content in the season with the content in the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with the season with terferes with the seasoning process. The high resistance to compression perpendicular to the grain, as shown by the strength table to the grain, as shown by the strength table given in the pamphlet, enables Douglas fir to withstand rail cutting, and this property, combined with its durability, has made Douglas fir the preferred railway crosstie or sleeper material of Western America. For many uses to which wood is put, light-ness is a distinct advantage. The use of Douglas fir in the construction of railway cars for instance, means a reduction in the dead weight that is drawn by locomorives. dead weight that is drawn by locomoxies, and, therefore, a permanent economy in operating expenses, especially in mountainous districts. A comparison of this timber with patch-pine from the Southern States, which is some 22 per cent, heavier, though no stronger, gives the following weights for cars of 80,000 lb. capacity :--

	Material required.	If made of Douglas fir.	If made of long-leaf pine.
Gondola car	5,000ft.	13,745lb.	17,0771b.
Box car	3,000ft.	8,247lb.	10,24£1b.
Refrigerator car.,	10,060ft.	27,489lb.	34,15 <b>3</b> 1b.

The durability of the wood, and the fact that its resists saturation by water cauce it to be used in large quantities for wooden piping, for continuous stave and jointed conduits used in power and irrigation works, for silos and tanks. It makes firstclass railway tiles, whether treated with preservative or not. Street pavement of crossited Douglas fir blocks properly laid is noiseless, dustless, economical in upkeeps and is durable and long-wearing, even under heavy traffic such as that of freight and dock yards

### WESTERN HEMLOCK (Tsuga heterophylla.)

The hemlocks are found only in Asia (three species) and North America (four species). Western hemlock, also called grey fir. Alaska spruce, western hemlock fir, western hemlock spruce, hemlock spruce, Prince Albert fir. holds first place in point Prince Affect III, holds like face in point of size, and yields much the best lumber. Mature trees average 125 to 150 ft. in height, and 2 to 5 ft. in diameter. Occasional trees are 250 ft. high and 8 ft. diameter.

The cool, moist climate of the British Columbia coast provides conditions necessary for its hest development, and it is found there

for its best development, and it is found there in great quantities, as well as throughout much of the interior of the province.

The wood of western hemlock is light, fairly soft, strong, tough, straight, grained, not splintery, odourless, and tasteless. It contains no pitch or resin, and is usually light a colour, but often reddish brown in the invision of the transity area of workit colour, but often reddish brown in the interior of the tree. Its strength, case of working, and freedom from warp or shake distinguish it sharply from the Eastern species. Although Douglas fir is superior for very heavy construction work, western hemlock is but little less strong, and for all ordinary hinding purposes is equally useful.

Tests upon green stringers of all grades show that western hemlock has 63 per cent. of the strength of Douglas fir. Dry hemlock weighs 2,240 lb. per 1,056 ft. board measure, as against 2,749 lb. for Douglas fir. a matter that affects its price considerably when ship-

## Currente Calamo.

The interesting summary of the provisions of past Defence Acts given by Mr. J. H. Hanson in his presidential address at the opening meeting of the Surveyors' Institution on Monday night is a timely contribution to the information needed by all whose province it is to act for real property owners, whose obligations to the State have been so considerably revived by the war. They are, as the President said, undoubtedly drastic and far-reaching, and when it is remembered that compensation for all interference is a matter of grace and not of right, to wall be understood that the services of surveyors will be in demand in ascertaining the amount likely to be paid and in obtaining it. Survevors, therefore, are busier than architects and likely to be so for some time to come. though probably to nothing like the extent of their ordinary work. That, however, has not hindered their prompt response to the primal duty of all to-day-active war service. That nearly 1,400 members have as promptly responded to the call as those of our own calling and our brethren of the civil engineers is something all may be mutually proud of, and we are sure that no member of either profession will hesitate to follow the noble example set.

The President of the Institution of Civil Engineers, in his address at the opening meeting yesterday week, dealt at some length with the necessity for the better utilisation of our national resources, if the present generation is to sustain the huge burdens war is piling on to our backs when peace comes, leaving posterity as usual to pay off the phenomenal load of debt we are saddling it with. He confined his remarks in the main to the Iron and Steel Industries, Timber. Floods and Land Drainage, and the Land. Under each head Mr. Ross had, of course, the old tale to tell. Government indifference -except when action offers opportunities for nepotism in the interests of family connections or political partisans—and the lavishing of our resources on other nations, blinded us to the fact that our boasted "commercial prosperity" was a delusion so far as the welfare of the great mass of the nation was concerned. On every hand, of course, we hear of effort and inquiry and organisation, which is to end all this-generally followed by very proper protests from those concerned, that the men selected on committees and the like are in many cases round pegs in square holes; and little will come of it all except the spending Every indication of more money vainly. points to the conclusion that unless we find out within the next decade how to feed ourselves, house ourselves, and defend ourselves. the coming crash in Europe of the civilisation of the last fifty years will find us amongst its earliest victims.

All who can should not miss the interesting exhibition of pictures which four members of the Artists' Rifles are holding this week at The Club, Loughton. Their names are Lance-Corporal Edward Handley-Read. R.B.A., Private Gerald Ackerman, R.I., Private Edgar L. Pattison, and Private James Thorpe-all well-known artists who have from time to time exhibited in the Royal Academy. Private Thorpe, the black and white artist is represented by a series of cartoons and black and white studies, many of which have their new noises on these terms of three already appeared in Punch, the Bystander, the Graphic, etc. Four of his car- In the recent case of "London and Northern the wender's expenses." black and white studies, many of which have

toons depict Major Sir Richard Rveroft, Captain Edge, Lieutenant T. H. Hughes (Artists Rifles), and Mr. Arthur Morrison, the wellknown writer, who appears as an "extra Special." Private Pattison's contributions include two etchings and several excellent watercolonis. Private Ackerman is an old R.A. student, who won the Creswick landscape prize when he was twenty-four. Two of his pictures were in the Academy this year. His sketches on view are a series of water-colours. mostly sketches of the country in the neighbourhood of the camp and the Sussex Downs. Lance Corporal Handley-Read's studies of the silver birch in the Forest are very good, and one entitled "Somewhere in France" was painted while the artist was at the officers' training camp at the front.

The individuality and distinctive characteristics of the subjects portrayed are admirably brought out in the fifty two portraits photographed by Mr. Furley Lewis, President of the Royal Photographic Society, and hung as a one-man show at the Camera Club, 17, John Street, Adelphi, W.C. The works are all by the platinum process, and exhibit considerable variety in pose, treatment, and lighting. All are successful pictures, even where the subject, as in No. 28, seems to have carelessly thrown himself back in an easy chair in an attitude that would be baffing to many experts with the camera. No. 5, a three-quarter length portrait of Mr. J. C. S. Minnmery, A.R.LB.A., one of the predecessors of Mr. Lewis in the presidential chair at 35, Russell Square, depicts that wellknown architect, pipe in hand, and in a contemplative and genial mood. Another past-President of the R.P.S., Lord Redesdale, who has just delighted us with his reminiscences, is happily shown in No. 36; the veteran diplomatist is seen in top hat and frock-coat. In No. 14 Professor Patrick Geddes is limited tull face, looking forward as if considering a fresh development in town-planning. Of the two portraits of Ignaz Jan Paderewski we mefer the full-face, No. 52, exhibited this summer at the Royal Photographic Society's display in the Suffolk Street Gallery, to that of the great violinist and Polish patriot seen in profile, No. 27, now shown, we believe, for the first time. No. 31, "The audience was small but sympathetic," is a back view of a player on the instrument; his sole auditor is a small boy carrying a toy horse. The familiar earnest expression, deep-set eyes, and short grey heard of Mr. John Burns are well portrayed in No. 32; and another fine character study is that of Prince Kropotkine No. 3)—the benevolent aspect of the lofty forehead and broad bald head, spectacled eyes, and flowing beard is as unlike that of the typical revolutionary Socialist of high hirth and social status as could be imagined. There are several ladies' portraits on the walls, the best and most charmingly posed, perhaps, being that of Mrs. Furley Lewis (No. 47), hung next to the busts of their little sins, Wentworth and Jack Lewis. The exhibition, which will well repay a prolonged visit, remains open until Saturday, the 27th

Although leases, which word in law includes the usual tenancy agreements for three years, given by or to alien enemies continue binding during the war, a very pretty point arises where, as the premises let are in a prohibited area, the lessee or tenant cannot remain in occupation. Builders who so frequently let their new houses on these terms of three

Estates v. Kish Schlesinger," a flat at Westcliff, which is part of Southend in Essex, and in a prohibited area under the Restriction Order, had been let by the plaintiffs to the defendant, who is an alien enemy, on an agreement for three years from March 25, 1914. There were the usual covenants as to the flat being used only as a private dwelling and against assigning or underletting it without the landlord's consent. In December last the defendant wished to terminate the tenancy, which the plaintiffs declined, but allowed him to try and let it, which he failed to do. The landlords had brought an action in the Mayor's Court, London, for a quarter's rent, due last Lady Day, and the judge there had held that the Restriction Order did not avoid the lease, as, although the defendant could not live in the house and the landlord could not let him remain, he could sublet it if he found a tenant. On appeal to the High Court this ruling has now been confirmed, the two judges holding that the State had not put an end to the lease or agreement, nor had the Restriction Order affected the term of years granted thereby and vested in the tenant. So the enemy alien remains liable for the rent of the flat until March, 1917, although he may not himself be allowed to live there. It is said there will be a further appeal, which will be watched with interest, because there are many other like cases awaiting decision in similar prohibited areas.

The invitation addressed by the Board of Inland Revenue to the officials of the Land Valuation Branch, permanent and temporary, to apply for appointments in the Income tax Service, has caused the gravest concern amongst the surveyors in the latter department. An interview with the Board has already taken place on the subject, and a special general meeting of the surveyors has been held to consider the situation. They hold that to appoint temporary valuation officials in another department over the heads of the existing staff, all of whom entered by competitive examination, would be to rectify one injustice by creating one of larger dimensions, and at the same time would create a most undesirable precedent. It is urged that these transferred from the Land Valuation Department should, in justice, rank after the last assistant surveyor already on the Inland Revenue establishment. Mr. Montagu, Financial Secretary to the Treasury, has promised, in ansver to questions by Mr. O'Grady in the House of Commons, to investigate the whole subject. ---

The urban district council of Haslemere have adopted a scheme for improvements at the swage works estimated to cost £840. The alterations provide for a separation of the storm water from the sewage proper, and the existing bacteria beds will be utilised in the improve-ments, which include the installation of new analg galante

Mr. H. G. Crothall, F.R.I.B.A., county architect of Middlesex, has voluntarily offered to his county council that, during the suspension of the works in connection with the prosion of the works in connection with the proposed new sanacorium and the new lunatic asylum, his salary should be paid at the rate of £1,000 instead of £1,200 per amum, as authorised by the council in May last. The council have accepted the offer.

At the last meeting of Droitwich Rural District Council, a letter was read from the Local Government Board declining to sanction Local Government Board declining to sanction a loan for the purchase of land for housing schemes at Umbersley. Snead's Green, and Cutnal Green. The council had decided not to build in the near future, but desired to pur-chase the sites in order to be prepared with the necessary land should cottages be required after the war. It was decided to already a few

dow openings are filled with pierced stone tracery in such a way as to break up the datect rays of the sun. The roofs are constructed of ferro-concrete, and have top openstructed of ferro-concrete, and have top openings for extracting heated air. Asbestos covering the roots will moderate the heat and help to keep the building temperate. Mr. Fellowes Prynne relies largely upon the messics and tempera decorations, which are intended to form some of the chief features of the interior. The four cardinal big arches carrying the central capola will have the mural spaces above them painted with the great subjects of the "The Nativity," "The Transfiguration," "The Resurrection," and "The Ascension," The choir will be decorated in its roofs by "The Heavenly Choir" and "The Church Triumphant." The estimated cost of the building is cal-culated at about £72,000, and its completion w.ll put a befitting climax to the manly episcopate of B.shop Copleston, who has leng worked with much success to secure a worthy metropolitan church in this important centre of Eastern life belonging to the British Empire. The plan which accompanies the three perspective views shows how complete its arrangements are throughout. The west front view and interior of the cathedral were shown at the Royal Academy this year.

### OBITUARY.

Mr. Wilnam Galsworthy Davie, the wellknown architectural writer and draughtsman died or the 26th ult. at Furze Platt. Maidenhead, in his seventy-fifth year. Writing in the R.I.B.A. Journal, Mr. Leonard A. Shuffrey states that Mr. Davie began his architectural career in the office of Mr. Lauder, of Barnstaple, and whilst there, in response to an advertisement, he applied for and pro-Gured a situation as assistant to William Butterfield, in Adam Street, Adelphi, where he stayed for several years. In 1871 Davie competed for and won the Royal Academy Gold Medal, with a travelling studentship, for the best design for a college, and the year the Soane Medallion and travelling studentship for a design for Royal stables and residence for the Master of Horse. Francowas chosen for study, where some months were spent sketching and measuring mainly Early Gothic architecture. The result of this tour, made during the years 1874-5, was the publication by B. T. Batsford, in 1877, of "Architectural Studies in France, by W. Galsworthy Dayle," a large folio volume Galsworthy Davie," a large folio volume containing, besides many measured drawings of Early French Gothic details to a large of Early French Counce details to a large scale, a number of plates in colour of floor tiles, stained glass, decoration, and eccle-siastical metal-work, principally from Anyeire Cathedral. After leaving Butter field Davie commenced to practise. fountain, executed at Chippenham, was won in competition, and he erected some houses at Brighton, but his health failing, he retired into Buckinghamshire for some years.

Second Lieutenant Alexander Second Lieutenant Alexander Wingate, Le B.L.B.A. 5th Highbard Light Infantry, was killed in the recent fighting in France Lieut, Wingate was educated at Kelvinside Academy. He was articled to the late Mr. Weles S. Golson, and was afterwards in the offices successively of Sir John Burnet in Gla row and Professor Beresford Pite in Lordon. He travelled for a year in Italy, Spain, and Portugal, exhibiting the feuits of his tour in a series of water-colour sketches at the Gossow Institute of Fine Arts. In at the Gasgow Institute of Fine Arts. at the Gassow institute of Fine Aris. In 1991 he was awarded a medal in the Adwanced Class of Design at the Architectural Association. He started in practice alone in 1995, and atterwards entered into partner-ship with Mr. J. Campbell Reid, F.R.F.B.A. He was a member of the Architectural Asso-ciation. London, and an Associate Member of the Clasgew Institute of Architects.

Donald, the Evangelist, Queen's Road, at 11.30 a.m., and the city or gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place on the city of gineer of Glasgow, took place of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gineer of gin

as far back as 1870, and rose to be chief city engineer, a position which he occupied for twenty-five years, retiring in May of this year. During that period he was responsible for many important schemes, notably the main drainage system, which is the second largest scheme of the kind in the world. Apart from Glasgow Corporation work, his advice was sought by many municipalities, and he was a frequent witness at Parliamentary and other inquiries. Mr. M Donald is survived by his widow and a son and daughter. The son recently received a commission in the Glasgow Highlanders, in which he had served as a private.

The death has occurred of Mr. T. H. B. Heslop, M Inst.C.E., county surveyor of Norfolk, at the age of sixty five. He had been a sufferer from heart trouble, and in August last he went to Harrogate for a period of rest and recuperation. He benefited from the change, and was engaged in his official duties up to Saturday, October 30, when he attended a meeting of the Road Tarring Committee. The end came suddenly two days later at his residence. Edgewood, Eaton, near Norwich. Mr. Heslop was appointed county surveyor of Norfolk in 1885, in succession to the late of Morior in 1000, in succession to the late Mr. R. M. Phipson, and Mr. R. M. Brere-ton, who had held what was practically a joint position. During his tenure of office of thirty years he was engaged in many important undertakings, and at the time of the great flood in 1912 rendered valuable service in meeting the difficulties then presented and afterwards in repairing the damage done, In the work of road construction he took a high position. Mr. Heslop had been the president and was until his death the hon. secretary and treasurer of the County Surveyors Society. He leaves a widow, two sons, and one daughter.

The Irish Builder, in its current number, The Irish Builder, in its current number, reproduces from the Dublin daily papers last week the following notice:—"Jones—September 9, 1915, at his residence, The Gables,' 285, Barkly Street, St. Kilda, Melbourne, Alfred Gresham Jones, architect, late of Dublin, aged 93 years." It recalls, says our contemporary, the personality, and passenge at this advanced age, of a pace year, wellany contemporary, the presenting at this advanced age, of a once very well-known Dublin architect, Mr. Alfred Gresham Jones, who before he emigrated had a fairly extensive practice in Ireland. His chief work extensive practice in Ireland. was the old International Exhibition Buildings in Earlsfort Terrace, built by the late Mr. W. Beardwool, the main structure of which was designed to afford a permanent centre in Dublin for exhibitions, flower shows and concerts, and was very substantially built of permanent materials. Attached to it found of permanent materials. Attached to the were very pleasant and well laid out pleasure-grounds, now Lord Iveagh's gardens. The buildings included a fine concert-hall, the closing of which is a great loss to Dublin.

After fulfilling these purposes for a number of years, the buildings were in 1880 acquired by Government, who had just established the Royal University of Ireland, and set up the Intermediate Education system, and as such was utilised until the passing of the recent Irish University Act, when the buildings were handed over to University College, Dublin, who are now er eting new blocks and demolishing some of the old fabric. It had a fine frontage with a portio, though carried out in cement. Mr. Jores, who was the architect of Trinity Church, Rathmines, and other buildings, left Dublin to start practice in Australia, where, it is understood, he was very successful.

We regret to note the death on Monday last at Valencia House, Queen's Road, Fins-bury Park, N., of Mr. John Millett Newton, at the age of 63, the governing director of the well known and old established business of John W. Newton and Sons, Limited, glass merchants, of 21, 22, and 23, Hatton Garden, E.C. The funeral service will be held to morrow at the Church of St. John the Evangelist, Queen's Read, at 11.30 a.m., and the interment will follow at the Great Northern Cemetery, New Southgate, N.

ARCHITECTURE AFTER THE WAR The desirability of doing everything possible to advance architecture in the Midlands was the chief subject dealt with by Mr. G. Salway Nicol, A.R.I.B.A., in his presidential address to members of the Birmingham Architectural Society on Friday night. The disturbance of war, he pointed out, could never be more than a temporary matter compared with the perpetual claims of architecture, and the success of our army and navy would once again leave us free to devote our energies to the development of the arts When that opportunity occurred, of peace. as most assuredly it would, it was of the ntmost importance they should have a more definite idea of the course to be pursued than they had had in the past. Continual changing from one phase of design to another would Recommending the younger lead nowhere, members of the profession to support the Municipal School of Architecture, the President said it was from such a source as this that the founding of a traditional style of building might be expected. The finest buildings of the past were invariably the result of working for generations in the evolution of art on similar lines, and in spite of extended knowledge of the various styles it was quite possible by the foundation of definite schools of design to re-establish this principle. It was only by means of such a traditional style and the co-operation of the complementary arts of sculpture and painting that the finest results could be attained.

CIVIC SURVEYS AND TOWN PLANNING IN YORKSHIRE.—Representatives of various West Yorkshire towns attended a conference held at the Town Hall, Leeds, on Thursday afternoon, for the purpose of inaugurating a civil survey scheme similar to those which are in existence in London and in Lancashire. The object of the scheme is to collect in regard to different districts data which may be of use in the preparation of town-planning schemes, and incidentally it is to provide work for architects who are suffering as a result of the war. The schemes are supported by Government allowances from the Prince of Wales's Fund. It was decided to form a consultative committee, the members including the Lord Mayors of Leeds and Bradford; Ald, Jessop, of Huddersfield: Mr. Charles Lupton, of Leeds: Miss Unwin, of Shipley; Mr. M. E. Sadler, Vice-Chancellor of Leeds University; and the Medical Officers and Engineers of Leeds, Bradford, Wakefield. Dewsbury, Batley, and Spenborough.

EXCAVATIONS IN THE CRYPT OF ST. MARY LE BOW CHURCH.—In a paper read before the British Archeological Association at their rooms in Russell Square on Thursday evening, Mr. F. Lambert described "The Excavation carried out by the Association in the Crypt of the Church of St. Mary-le-Bow, Cheapside. When Sir Christopher Wren rebuilt the tower of the church he found a Roman causeway, on which the foundations of the tower were laid. In the recent excavations a trench was dug along the east side of the crypt, along the line of Bow Lane. The first three or four feet down consisted of made earth; the next seven feet was a black peaty swamp, and at the hottem of this mass were two oak piles with planks which had been used to embank a stream running almost north and south across Cheap-The question was whether that stream could be followed in any other part of London? He thought it could. The old idea that Moorfields was a primitive swamp had long been abandoned in favour of the more reason able explanation that the swamp was caused by the Walbrook, which used to flow through London Wall by means of culverts, one or two of which had been found. In late Roman times, or after the Roman excavation, these culverts were neglected, and became blocked up. The river, therefore, spread a considerup. The river, therefore, spread a considerable distance, and the swamp began to form, and found an outlet by passing underneath the foundations of the walls all the way along from Cripplegate to Bishopsgate, and so into the Thames. It was already known that a swamp existed under the east end of St.

Lawrence's Church, under the Council Chamber of the Guildhall, and under the Public Health Office of the Corporation in Basinghall Street, and he suggested that these were caused by a stream parallel to the Walbrook, which, flowing south, had in turn caused the Church. By connecting these four places they got the line of flow. The presence of the swamp crossing the middle of Cheapside caused the Normans who built Bow Church to lay exceedingly massive and deep founda-tions. Mr. W. A. Cater, F.S.A., afterwards read a paper describing the mediaval church and crypt of Bow.

ROCHDALE MASTER BUILDERS' AS-SOCIATION.—A half yearly meeting of this association was held in the Masonic Hall, Oldham Road, on Wednesday evening. The president, Mr. T. S. Wilkinson was in the chair. After the disposal of the business of the meeting. Mr. Fred Greenwood's concert party provided an enjoyable entertainment. During the evening the five special given by the association, and awarded by the education authorities to the successful Building Course students at the Technical School, were presented to the students by the president, who, after congratulating them on their success, advised them to continue to take full advantage of the educational facilities granted, and also to remember that whatever was worth doing at all was worth doing well Mr. T. Howarth also delivered a short address in which he pointed out the necessity for and the value of strict attention to detail and thoroughness in every undertaking. The thoroughness in every undertaking. The prizewinners were:—John L. Shepherd, 112. prizewinners were :—John L. Shepnerd, 112. Church Street, Littleborough: Herbert V. Townend, 14, Moss Street, Rochdale; Fred Crossley, 20, Newall Street, Littleborough; Fred Kershaw, 3, Penine Villas, Littleborough; and Harry Wild, 36, Rose Terrace, Shore Road, Littleborough.

ULSTER SOCIETY OF ARCHITECTS. The October annual meeting of the members, associates, and students of this society at the society's rooms, 9, Howard was field at the society's rooms, 9, Howard Street, Belfast, on Friday, the 29th ult. The chair was occupied by the president, Mr. N. Fitzsimons, F.R.I.B.A., and amongst those present were Messrs, R. E. Buchanan, W. J. Gilliland, F.R.I.B.A., H. Seaver, B.E., F. H. Tulloch, F.R.I.B.A., W. C. Maxwell, A.R.I.B.A., Captain Ferguson, R.E., and T. W. Henry, M.S.A. hon, secretary. The W. Henry, M.S.A., hon, secretary, The report of the council regarding the alliance with the R.I.B.A., and its correspondence were submitted to the meeting and discussed, and the council was instructed to follow the matter up to a definite conclusion. The President reported on negotiations he had had with reference to a proposed memorial to the late W. H. Lynn, R.H.A. The proposal was discussed at some length, and referred back to the council for further development. The work of the Architects' War Committee was reported on and discussed by some of the members, and some suggestions were made as to its working with reference to War Office works. The scheme of the Central War Committee with relation to enrolment for national service was read from the correspondence of the War Com-mittee of the Royal Institute of British Architects, and the members unanimously decided to support the scheme. Mr. Robert 1. Calwell, of Donegall Square South, Belfast was elected a member of the society by ballot Messrs. H. Seaver and Captain Ferguson acting as scrutineers.

Mr. T. M. Williams, who has been docks marine manager at Southampton since 1902, has been appointed a justice of the peace for the borough.

Exterior additions are being made to the post office at Ballsbridge, Dublin, from plans by Mr. Andrew Robinson, of H.M. Office of Works, Dublin. The builder is Mr. F. B. McKee, of Belfast, and the outlay will be about

## Trade Delvs.

WAGES MOVEMENTS.

MANCHESTER AND SALFORD.—The Northern Building Trades Conciliation Board has conferred in Manchester to consider an has conferred in Manchester to consider an application for an advance in wages made by the bricklayers, the joiners, the sconemasons, the wood-cutting machinists, and the builders' labourers. The board decided to grant the labourers an advance of a penny an hour and the skilled men an advance of a half men a plane party and board the labourers. penny an hour, making the labourers' wages 7½d, and 8d. (instead of 6½d, and 7d.) and the skilled men's wages 11d. (instead of 10½d.). This is an advance in the rate of wages—not a war bonus—and it applies to Manchester and Salford and the ourkirts.

TRADE NOTES.

Boyle's latest patent "Air-Pump" ventilators have been applied to the Presbyterian Church, Limerick.

>-

The storage benefit of a basement is often ninimised through damoness. We learn that two such basements in Birmingham have now two such baselinens in Drinningham have how been successfully treated with a blue brick lining, the bricks being bedded with Padlord

liming, the pricks being between and centent mortar.

A fire recently occurred at Win. Morris and Co.'s, of Ruskin House, Rochoster Row, Westminster, and was reported so extensively that e. 1. and transport withholding Co. s. of Kuskin House, Rochoster Row, West-minster, and was reported so extensively that the firm finds architects are withholding orders on the supposition that they cannot be carried out. The damage, however, was con-fined to the top story, which was being used as a drill hall. The "Ruskin House" works are proceeding uninterruptedly, and all in-convenience to output has been entirely over-come. Messus, W. Morris and Co., whilst grateful to those friends who have so kindly sent their good wishes, hope that they may continue to receive orders, the execution of which will be absolutely unhampered. Messus, E. B. Shorland and Brother send us their new catalogue, No. 31, of their most recent warming and ventilating specialities. It contains illustrations and sections of their latest warm-air ventilating Manchester grate with patent hot-water boiler with intersecting flue, various designs of their well-known warm air ventilating patent Manchester grates, some having low fires, whilst others are shown fitted with vertical front bars, ventilating speciali-ties, electric fans, and louvre r of ventilatiors

with vertical front bars, ventilating specialities, electric fans, and louvre roof ventilations to work in conjunction with same, patent hygienic inlet ventilators, sections of their warmair ventilating patent Manchester stoves, which are in general use in hespitals, in firmaries, etc., and a list of a few hospitals where their patent Manchester stoves, etc., lead a lower lower love in the land love love love love love love. have been installed.

PARLIAMENTARY NOTES.
SAFETY OF NATIONAL GALLERY TREASURES.—Mr. Asquith, replying to Mr. Butcher, said: The question of the protection of the National Gallery has received the elementation with experts. Many pictures have been removed from exhibition, and in eight attention of the Trustees and Director in consultation with experts. Many pictures have been removed from exhibition, and, in view of the special precautions adopted, the Trustees, after full consideration, have felt that they would not be justified in closing the Gallery. Mr. Butcher: Is it not the fact that there are many irreplaceable pictures still on the walls? Mr. Asquith: I have not been there lately. been there lately.

A meeting of the suburban committee of the Midlothian County Council was held or Wednesday in the County Rooms, Edinburgh when it was reported that, in contravention of the bailding bye-laws, the building of an addition of ten bedrooms it (1)2-lockhart Hydropathic was commenced with out plans being submitted, and that co-plans being submitted, and that co-plans being subsequently soft in they were found not to conform in many respects with the requirements of the byce-laws. It was resolved to insist on the build-ing being taken down and removed.

900

ling being taken down and removed.

Lance-Corporal G. Ramsay Thomson, 12th Battalion Royal Fusiliers, son of Mrs. Thomson, West Grove, St. Cuthbert's Avenue, Maxwelltown, has been posted as wounded and missing since September 28. Mr. Thomson is a partner in the firm of Messrs. Crombie and Thomson, architects, Irish Street, Dumfries, and he enlisted into the Army immediately after the outbreak of war. The other partner in the firm, Captain W. F. Crombie, L.R.I.B.A., served in the Dardanelles with the 15th King's Own Scottish Borderers, and he was invalided home wounded some time ago.

# Building Intelligence.

EDINBURGH .- The hearding is being removed from around the front section of the Royal Dick Vetermary College buildings, in Summerfull Hope Park, of which the toundation stone was laid by the Marquis of Linhthgow, July, 1914, and this portion will he occupied after the Christmas holidays. The nain buildings, which are Classic in character, form three sides of a courtyard, and in them are grouped separate departments for anatomy, chemistry, physiology, pathology, biology, materia medica, and obstetrics. Connected with the various departments there are seventeen laboratories and tive lecture theatres, with adicining and five lecture theatres, with adjoining preparation rooms, and a dissecting hall with accommodation for over saxty students. On the east side of the courtyard is a separate clinical department, where the practical work of the College will be carried on. In this department there are, in addition to loose boxes, stables, cow-byre, and sheep pens, five isolation and general words for dogs and isolation and general wards for dogs and cats. The clinical block also contains two operating theatres for large and small animals respectively, "X"-ray apartment, and room for pharmacy and surgical demonstrations. The college is being erected from plans by Mr. David M'Arthy, L.R.I.B.A., of Frederick Street, Edinburgh, Unfortunately, a financial crisis has arisen owing to the war, and an urgent appeal is being made for the £12,000 necessary for the completion of the building on a curtailed scale. About £50,000 has already been expended on the buildings.

WEST THURBOCK HOUSING SCHEME

WEST THURROCK HOUSING SCHEME. -The Rural District Council of Orsett has recently built on two and a-half acres of land recently built on two and a-half acres of land at West Thurrock fourteen cottages for the working classes, being half of a complete scheme of twenty-eight cottages, the building of the remaining half being postponed until the conclusion of the war. The accommodation in each case is as follows:—On the ground floor: Entrance lobby, out of which the stairs lead, living room, scullery, larder, coal store, and cupboard under stairs; on the first floor: Three bedrooms, with a cupcoal store, and cupboard under stairs; on the first floor: Three bedrooms, with a cupboard over stairs. The cottages are semidetached, each standing on a plot of land having a frontage of 26 ft, and a depth of 116 ft. The cost per cottage works out at about £173, including road, drains, and fences, but not land. After allowance for repayment of loan, insurance, repairs, empties, etc., in accordance with the Local Government Board's schedule, the cottages are self-supporting at a rental of 5s, 6d, per week each, including rates. Mr. F. J. Winter, M.S.A., of 2. Heygate Avenue, Southendon-Sea, was the architect, and Mr. F. C. Stark, of Morris Avenue, Manor Park, the builder. the builder.

#### -STATUES AND MEMORIALS.

MEDALLIONS IN WESTMINSTER ABBEY—In Westminster Abbey medallions have been uncovered to perpetuate the memory ABBEY—In Westminster Abbey medallions have been uncovered to perpetuate the memory of three famous scientists—Sir Joseph Hooker, Lord Lister, and Dr. Alfred Russel Wallace. The new memorials have been placed on the wall of the north aisle of the choir, beneath the organ, and the medallions which were already there have been rearranged. The bronze medallion of Charles Darwin is now at the end nearest to his last resting-place, and the fresh memorial to Dr. Russel Wallace, whose name is associated with that of Darwin in scientific work, has been placed next to it. The Wallace medallion is the work of Mr. A. Bruce Joy. Lord Lister's memorial, which is placed next to that of Dr. Wallace was executed by Sir Thomas Brock. Other than the name, it bears no inscription. The tublet to Sir Joseph Hooker is lower on the wall, near the tomb of Lord John Thyme, below the tablet to Sir George Gabriel Stokes. The inscription is:

—"Josephus Daitor, Hooker, 1317-1911. Herbarium Scientia Praestantissimas" This monument is the work of Mr. Frank Bowcher.

Mr. Dolan, assistant surveyor to the Ros-common Rural District Council, has resigned after fifty years' service.

## Om Office Cable,

An important loan exhibition of drawings, principally by artists of the British school, and almost entirely gathered from Yorkshire collections, is open at the present time in the Corporation Art Gallery, Bradford. Among the older British school, such men as Rowlandson, Romney, Gainsborough, Lawrence, Blake, Cotman, and Constable are represented. There is an even larger and more varied collection of modern work, which includes examples by Messix, John, Rothenstein, Bone, Cameron, Strang, Clausen, and many others. Drawings by such Victorians as Ruskin, Madox Brown, and Alfred Stevens, and a few studies by important French artists like Puvis de Chavannes and Danmier are also shown.

The urban district council of Frome received at their last meeting a suggestive report by Mr. F. W. Jones, their surveyor, on the question of true economy in road maintenance, which deserves a wider circulation than the governing body of that flourishing little Somersetshire town. Mr. Jones remarked that it was only fair to everyone concerned to realise that a wrong inter pretation might be put on the word economy Some people might think that a rigid cutting down of the stone allowance was economy, because, for the time, the stone bill was Such a policy, if carried too far, reduced. would only end in the ratepayers having to face a quadrupled expenditure. For if surface crusts were to be allowed to be worn through, the expense of renewing the substructure of the road must be enormously greater than the mere maintenance of the And it was not to be torgotten that for transit purposes the roads to-day were being increasingly used to relieve the con-gested state of the railways, and it was important that the main arteries, at least chould be kept up to bear this increased traffic.

The damage done to the Church of Santa Nazaret (commonly called the in "Church of the Scalzi"), in Venice, during the recent Austrian air raid appears to be irreparable. The architecture is of the Late Renaissance period. The chief artistic value of the church lay in the vault fresco by Tiepolo, which has been almost completely destroyed. The fresco was of the same period as the famous picture of the Carmine (1743-44). It represented the Virgin expelling the heresies from her house. about the Madonna, both above and below. were groups of angels. The fresco covered the entire vault of the nave. The bomb fell the entire vault of the nave. The bomb fell on the apex of the nave, bringing down almost the whole vault. Only fragments of the fresco remain on the parts of the vaulting which springs from the pillars. lies in fragments on the floor of the church. Experts who have visited the church say that there can be no question of restoring the fresco.

We heartily endorse the Bishop of Worcester's sensible remarks as to the extravagant size of many memorials in our churches, in the current number of the Worcester Diocesan Magazine. The Bishop thinks that, in view of the sad fact that the war is likely to add greatly to the number of our tributes to the dead, it would be well that the clergy should make an effort to get the size of tablets and brasses reduced. "A small memorial in a church," says the Bishop, "has in it a beautiful i-lea, but large and pretentious monuments, which tend to occupy wall space and exclude poorer neighbours, are not suitable for the House of God. If this were pointed out to the relatives of the dead I am sure they would see the force of it, but, failing that, it might be possible that faculties should insist upon tablets of smaller dimensions."

The number of dwelling-houses certified as fit for human habitation in Manchester for the year ending October 31 is 415. This compared with 748 last year, 997 in 1913. Statistically 1,283 in 1912, 1,578 in 1911, 2,254 in 1910, and 2,344 in 1909. Divided into districts out.

the returns for this year show that 214 houses have been built in the Withington district, fifty-nine in Moston, forty-five in Rusholme, twenty two in Levenshulme, twenty in Openshaw, sixteen in Crampsall, thirteen in Clayton, eight in Cheetham, six in Newton Heath, five in Blackley, and one each in Moss Side and Ancoats. For many years Withington has headed the list. During the last seven years no fewer than 3,360 houses have been built in that district, Rusholme, Moston, Blackley, Cheetham, and Openshaw, generally in the order named, come next, but all the c districts show a great falling off in the last two or three years.

Second Lieutenant Charles Emerson Clouting, A.R.I.B.A. (of Sevenoaks), 1st Bat. Buffs (East Kent Regiment) has been awarded (of Sevenoaks), 1st Bat. the Military Cross for conspicuous gallantry on the night of September 21, 1915, near Forward Cottage, when on patrol duty with Captain Colville, 1st Shropshire L.L. Capt. Colville was shot within fifteen yards of the German sap which they were reconnoitring. and, although Second Lieutenant Clouting en deayoured to drag him back, he was unable to do so. It was uncertain whether Captain Colville was still alive, and, after the return of the patrol, a rescue party was led back by Second Lieutenant Clouting. He found Captain Calville dead, and, recognising that numbers would be a source of danger, he sent all his party back except Sergeant These two crawled back under heavy fire, dragging the body with them. was bright moonlight at the time.

The general report of the Survey of India for the year comprised between October 1, 1913, and September 30, 1914, has just been published. For topographical work a programme had been drawn up in 1905, compris ing 1,821,600 square miles; of this, 366,244 square miles have been completed in the ten years, and 1.455,356 square miles remain to be completed. During the year under report 54,359 square miles have been completed at a cost of Rupees 14,48,508, being it an average rate of Rupees 26.6 per square mile. The work was done in three circles, designated respectively the Northern, Southern, and Eastern, and their rate costs, respectively, were Rupees 18'2. Rupees 27'2, and Rupees 59'5. Rate cost for the Eastern circle was naturally high as it included much inaccessible and otherwise difficult country in Assam and Burma. All the forest surveys were also carried out by topographical parties, the majority on a scale of two inches to the mile, some on the one inch scale, and forest boundaries on the scale of four inches to the mile. Captains Bailey and Morshend of the Survey of India, after a six months' exploration of the Upper Brahma six months exploration of the Upper brahma-putta, returned in November, 1913, confirm ing the belief that the Tsin-po and Brahma-putra are the same river. They have cor-rectly located the great southerly bend in the course of the river, placing it about sixty miles further east than it was supposed to be and also definitely establishing the fact suggested by Sir S. Burrard that the great Namcha Barwa Peak, 25,445 ft. high, lies in this bend. These two officers have succeeded in making a reconnaissance of 16,000 square miles of hitherto unknown country

The Wallpaper Manufacturers Company paid 8 per cent, per annum on its ordinary shares for the nine years to 1906-7, but after that the dividend dropped to 4 per cent. Then for five years it stood at 5 per cent, but for 1913-14 it fell to 2 per cent, which was an interim distribution. Now the ordinary dividend ceases for the time being, and the preference dividend can only be paid by reducing the balance forward. The company has a deferred share capital of £1,095,621, but as this only takes the residue when the ordinary shares have had 10 per cent, paid on them, apparently it has yielded nothing in all the years named.

The rural district council of Crowland are about to construct a new road across Crowland Common to connect the north end of Remow's Drive with the road to Littleworth Station. The necessary land has been given by the owners, and the route is now staked

#### CHIPS.

Mr. John E. Drower, M.R.S.A., has been elected Master of the Govers' Company.

#### TO CORRESPONDENTS.

We do not hold ourselves responsible for the opinions of our correspondents. All communications should be drawn up as briefly as possible, as there are many claimants upon the space allotted to correspondents

correspondents

It is particularly requested that all drawings and all communications respecting illustrations or interary matter, books for review, etc., should be addressed to the Editor of the Building News, Ellingham Honse, I, Arnndel Street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' risks, and the Editor will not undertake to pay for, or be hable for unsought contributions.

the Editor will not undertake to pay for, or be hable tor, unsought contributions.

\*\*brawings of selected competition designs, important public and private buildings, details of old and new work, and good sketches are always welcome, and for such no charge is made for insertion of more commonplace subjects, small churches, chapels, houses, etc.—we have usually far more sent than we can insert, but are glad to do so when space permits, on mutually advantageous terms, which may be ascertained on application.

When favouring us with drawings or photographs, architects are asked kindly to state how long the building has been erected. It does neither them nor us much good to illustrate buildings which have been some time executed, except under special circum trances.

As a result of the fire at the town-hall of As a result of the fire at the cown-half of Truro last year the clock tower and conneil chamber were destroyed. They have now been rebuilt from plans by Mr. F. A. Barnes, the city surveyor, at a cost of £1,900.

A Sunday school training college, three stories in height, has been built at Wesley Hill, near Selly Oak, Mr. W. A. Harvey, L.R.I.B.A., of Bennett's Hill, Birmingham, was the architect, and the builders were Messrs, J. Barnsley and Sons, also of Birmingham.

### ARCHITECTURE BY SYNTHESIS.

By the analytical method, we break down to elements; by synthesis, we build up from the same elemental parts. If architectural design is to be based on synthetic lines we must reconstruct from primordial atoms—of architecture. If we seek to evolve true grace and beauty we must break up the old, and from its ultimate, unchangeable parts produce anew by recombination. To attain success in design on these lines we need to establish a working hypothesis.

Ordinarily, we do not proceed on synthetic lines in design. The truth seems to be that fitness, while an obvious essential, assists us not one whit in evolving beauty or in adding novelty and interest to architectural composition. The problem is to discover, in architectural design, how this attribute of fitness for duty helps to produce elegant variety. What, then, are the true elemental parts? On superficial consideration we might consider them to be such entities as columns, string-courses, fluted pilasters, pillared doors, and arched windows. Are

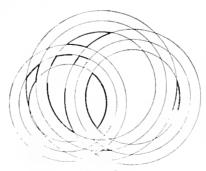

not such rather comparable to elementary molecules? A column is a composition of head, body, and base; a cornice is the massing of many unit parts into one feature. If we break up whole columns we find cylinders, or truncated cones, cubes, rectangular solids, and curvilinear and angular bodies. Now the square is an unchangeable; the cube was, is, and an unchangeaute; the cube was, is, and will remain a cube to all time. In designing a "rusticated" column, fitness, if a guide, is all against us. If we fall back on precedent we cease to operate as this large and prove the cube was, is, and will remain a cube was to be a superior to the cube was, is, and will remain a cube was, is, and will remain a cube was, is, and will remain a cube was, is, and will remain a cube was, is, and will remain a cube was, is, and will remain a cube was, is, and will remain a cube to all time. In designing a "rusticated" column, fitness, and will remain a cube to all time. In designing a "rusticated" column, fitness, and will remain a cube to all time. In designing a "rusticated" column, fitness, if a guide, is all against us. thinkers, and must open our formal copy-books for examples. We need sound theory respecting the elemental, which in architecture is plain rectangular, angular, or curvilinear form. We must cast all styles into the fining pot, taking therefrom the indestructible and unalterable components of building mass. These, common to all true styles, may be termed the atoms of architecture. It is evident that the cylinder and the truncated cone are such. The circle and part-circle are found profiling marble and stone in every country. Of all obvious facts the rectangle and rectangular mass are super-

basic in every mode of beautiful building. Equally, the juxtaposition of circle and rectangle is prime, elemental, and paramount in all refined and universallyesteemed architecture.

These considerations may suggest that the ultimate components of architectural

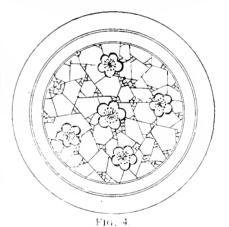

mass and form can be but few. Substantially, they are prime figures of solid geometry. Of such we must construct architecture by synthesis. These elemental, solid mass-forms should have the same significance for the architect that the square, circle, rectangle, angle and straight line have for the designer in the flat. Whereas, however, it really often seems to us that, in the view of the architect, perspective is something unnatural. Admitting that the reflection may seem strange, we yet record it, soberly.  $\Lambda$  Grecian Doric capital, on elevation, and the real feature as revealed in sun and shadow are two different affairs. Nevertheless, on plan, a certain parallel may

be instituted between the flat presentment and the actual effect in the solid;

Equally, in the plan of the Doric capital, the square abacus is revealed as contrasting pleasingly with the circular, or circleing preasingly with the circular, or circle-embraced, horizontal profile of the fluted column. So far as the plan goes, the correlation of elemental square to elemental circle presents, in a certain measure, a parallel to the true, perspective effect; but whereas in the case of the three carried at the true. the Doric capital all that we see is a pleasing pattern of a square enclosing a circle, in actual presentation we get the soft rotundity of the columns opposed harmoniously to the rectangular abacus; and since every rectangular mass presents to the eye one of its solid angles as acute, or virtually so, such correlation of rotundity and acuteness affords, according to universal judgment of the refined in all ages, a pleasing object to

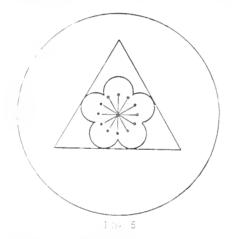

We have instanced simple forms that may be viewed as true, atomic parts of

architecture. Plainly, the Doric abacus is an elementary form-rectangular mass rendered the more nearly primordial because founded, in plan, upon the square, an obvicus, unchanging and unchangeable, fundamental and ultimate. No doubt we might be reasonably justified in viewing every rectangular mass, of whatever proportion, as atomic and elemental, or but little removed from such. The in cidence of its variability, so far as respects proportion, need not be considered an obstacle. Whatever its relative dimension, it is a plain rectangular figure; and if we desire to gain some insight into the effect of disposing, grouping and co-ordinating rectangular solids we must study such, under nutural aspect, in

by a revery rainy day in every process of the very circle is in hards at the very either circle. The circle is that the circle is the small, and every circle is the small, and every variety of the circle is the small circle is the circle is the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in the circle in

first 1 by choular intersection. 2 we have such a series of In I . reas as approximates to those formed Ly ranspash, or by a handful of pebbles cast in the point. At first glance we are present a with a consistently harmonious series of circles so bytonisly that the view may seem insipid and to lack foil but the ler inspection demonstrates that this is by no means the case. The very name given by geometers, "caustic signifies a mething sharply opposed to the Wherever suave nature of the circle. circle cars circle is formed a figure with r less sharp cutting edge, a verit The 15 able diagrammatic exposition of the philosophy if egg and torque-the smooth opposed to the spiny all produced from true circles solely. This is of practical interest to designers where a number of circular columns are grouped, as in a Goth e v.o.i. for, seen in perspective, at every tom where sincle sinkes circle a calistic is formed, more or less acute, according to the distance apart of the

a last mist show the less device, sketched in Fig. 4, represents such floral form on a backing of cracked to generate the right of the such floral form on a backing of cracked to generate the lamental life we study such an ornamental device, If we study such an ornamental device, and reduce the principle to an elementary diagram, as in Fig. 5, we shall see that it involves the enhancement of curve by straight line and angle. Our drawing is a matter of superficies; but, while regarding it, we may think of solid form, for we may equally employ the diagram to illustrate the perspective effect of the rectangular mass and the rotund in architecture, and see, in the upper, sharp angle, square building mass projected against spherical dome. The basis of ultimate eye-effect in the flat ornament and in the perspective of solids, is substantially identical. It is essentially the block, or rustication, projected against column drum. The rusticated column is a useful illustration, for it is obviously composed by alternating, ultimate, atomic parts of architecture—cylinder and cubic or quasi-cubic mass. If there be any true harmony in such rusticated columns, it is derived from the pleasing interplay of square and round; and whatever we may think of such column treatment, there is an undoubted eye-pleasing effect and certainly no obvious discord. The whole conception is too elemental in basic form to create positive offence, and above these considerations is the fact that anything tending to add emphasis to constructionalism, as the chief and most typical expression in architecture adds to interest, if not always to positive beauty

The synthetic method of design in architecture may not be attractive, but study on these lines would tend to ameliorate it to prevalent (vil the decorative treat ment of basically ungraceful mass. We are ensured of a correct base or foundation, of pure outline and simple mass formation, if our main lines of composition are arranged in accordance with some principle. If we can trace back such principle to nature, even by such humble means as rain-splash and brian thorn, we can feel confident that our work, if not super-excellent, can yet never offend

#### ---EMERGEN: Y MILITARY CONSTRUCTION HOSPITAL

WITH HALLSTRATIONS

A Chadwork public lecture on "Emergency Mulitary Hospital Construction" was delivered at the Royal Society of Medicare's premises Wimpole Street, W., on Wednesday after-noon, by Mr. Alfred Saxon Snell, F.R.I.B.A. The hall was crowded, the audience including Fig. 13. As a crowded, the address mending triny architects and medical men, and not a tex non-ses. Mr. John Slater, B.A., F.R.I.B.A., one of the Chadwick trustees, occupied the chair. The lecture was illustrated in the control of the chair. of the description of the locale was finely and the component hospital plans, elevations, and times, some of which are reproduced to is in this issue, and also by photographs of wards and grounds.

of wards and grounds. No cree could study the question of hospital design and construct on, observed the lecturer without resulting the far-sighted genus of Sir Edwin Chadwick, the idealism of Sir Benjamin Ward Richardson, and the proceed teaching and noble work of Florence Nightingale. In normal times they ad in England, in addition to the purely of an end indicator, exhibition to the purely core and mulitary establishments, a very tentumber of voluntary and public hospi-ater infirmaries. In view of the great imvenent in the zeneral health of the country country that the seneral health of the country caste years, those buildings had not been vive in full use. They might fairly, there may be expected to deal with the casualties re, he expected to dear went to successful it's tearrise at the first onset of an ordinary man it was obvious. that errors described in the first class war it was obvious, it is expected that errors described a consideration and thought of springs trained at an end of the end of springs trained at a sum obtained by rect of springs, trained at ways been contemplated by very favour terrors War Offices of all nations—even our own

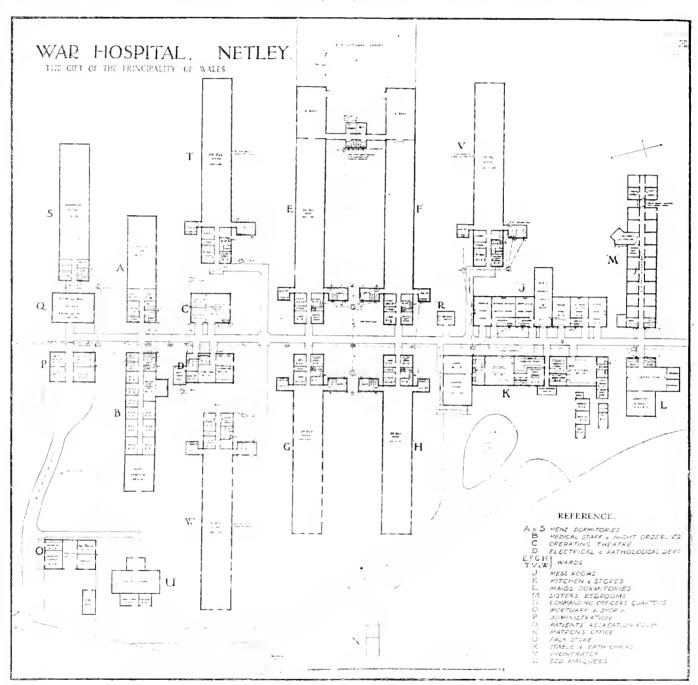

To meet such an emergency, all kinds of large buildings would be requisitioned for conversion as temporary hospitals. Indeed. in this country, a number of buildings had been scheduled for this purpose long before been scheduled for this purpose long before the present war broke out. Whether all the bindings thus scheduled were the best possible for the purpose was a matter of opinion; certainly there were grave objec-tion to the employment of schools as hospitals, and a church or mission-hall was at the best ill-adapted for its new purpose. In this, the greatest war with which the world had ever been cursed, private individuals had come forward, with unexampled generosity, offering their fine houses and resources for the benefit of the wounded. The conversion of part of Woburn Abbey for this purpose by the Duchess of Bedford was but one instance out of many he might cite. The Germans, with immense thoroughness, specially provided for the eventual occupation of all school buildings as emergency hospitals. had never gone so far, since we, unlike the Germans, regarded war as an occasional and disagreeable necessity. Our habit of facing mevitable difficulties with imperturbable good humour, trusting to get through somehow, really amounted in its resourcefulness to positive genius. Some weeks ago the lecturer inspected a small thirty-bed hospital at Willesden, improvised out of St. Matthew's Church Institute, where the main hall was utilised as a general ward, with three rows of heds, the platform, as an orderlies' retiring and general utility room, the committee room as an operating theatre, and other small apartments as kitchens, storerooms, and nurses quarters. In every part of the building all hospital rules were jubilantly ing all hospital rules were jubilantlignored, but goodwill and humour prevaile among workers and patients alike. In addi-tion to the conversion of existing buildings, War Office had also contemplated the erection of temporary emergency hospitals, and its stiff had long since prepared detailed plans for temporary buildings, which would be erected at short notice, quickly and at compara-tively small expense. The scale of the present war was, however, so vast that many civil architects had been called in to assist the War Office by preparing schemes both for the erection of temporary hospitals and for the conversion of existing buildings for that purpose. It was inevitable that many of plans so provided should been and plans so provided should have exhibited considerable variation from the War Office scale, both as regarded planning and construction, and these modifications were both instructive and interesting. The model plan issued by the War Office (shown at the foot of our double-page illustration in the centre of this issue) was, however, remarked Mr. Saxon Snell, very helpful; it provided a guide to the size, general arrangement, and relative p s tions of the various buildings required for a general hospital, and such information was obviously invaluable to an architect for a commencement of his work. Indeed, an architect might make the model plans the end as well as the beginning of his design, and it was conceivable that hard-worked officials at the War Office, to whom such plans had to be submitted, would welcome the civil architect's lack of imagination as relieving them from the necessity to criticise and analyse in a time of stress and hurry. But architects had not by any means confined themselves to adopting the model plans, but in most cases had introduced improvements and special modifications in their designs. The plans and designs he was exhibiting that evening showed quite a variety of solutions of the problem, all of which would repay close inspection and study. He was sure that these designs would influence those of all future hospitals, both temporary and permanent. One of the first of these hospitals, planned by an outside architect, was the \*First Eastern Military Hospital at Cambridge—one in which the promoters did not hesitate to act on their convictions, not counting the cost. This hospital represented an act of faith and counting on the part of these who constructed it, among whom he must mention Colonel

Described in detail in a lecture delivered by Dr. A. F. Shipley, Master of Christ's Hospital, Cambridge, before the London Architectural Association and fully reported in our last issue, p. 524.

and Professor G. Sims Woodhead, and its architect, Mr. Charles F. Skipper, of Cambridge, both of whom knew that their principles were sound. It ought to be borne in mind that open-air wards, for use both in winter and in summer, were by no means novelties in this country. For instance, Dr. Philip Boobbyer, medical officer of health for Nottingham, had had several in his extensive district for a number of years, and in these every kind of disease, not excluding pneumonia, had been treated under every variation of temperature and climate with the greatest success. The value, from a health

under these conditions they preferred it to any other. Reverting to temporary hospital planning and construction, the lecturer planning pointed out that the nucleus in most cases was an existing hospital or large house utilised as administrative offices and staff quarters. The temporary ward blocks were erected in adjoining fields or gardens. The War Office adjoining fields or gardens. The War Office model plans provided for a framing of timber,

out that we should not be critical as to the finishing, nor expect to find any meticulous care displayed in the provision of rounded internal angles, nor even in the avoidance of dust ledges. Aseptic surfaces were not to be expected; sinks and layatories were often supported on rough wooden frames, and fittings were not always fixed clear of the walls. They must not think lightly of architects ined on the inside with boarding or plaster, and on the outside with corrugated iron. The locause such commonplace rules of hygienic roofs were also finished with corrugated iron. Such buildings were no doubt quickly erected, but aesthetically they left much to be with refinement in detail. Ore matter he

from designs by Mr. R. J. Allison, A.R.I.B.A. by Messis. Perry and Co., of Bow: it covers an area of about 525 ft. by 190 it., with a floor area on eight stories of 48 1960 sq. ft., and had been adapted for use as a hospital from plans by Mr. Edwin T. Hall, F.R.I.B.A., carried out by Mr. H. B. Measures, M.V.O., F.R.I.B.A., the Director of Barrack Construction. Theoretically, it was a most unsuitable building, as most of the wards were lighted only from small enclosed areas: but the exceptional position, close to Waterloo Terminus, rendered it of special value for the reception of wounded military men. The whole building was well finished and fitted. The wards were divided off by hight concrete partitions, and everything had been done to secure whatever ventilation was possible. It provided beds for 1,700 men. The lecturer exhibited a general plan for an isolation hospital, designed by Mr. Charles Skipper, and estimated to cost about £80 per bed; Mr. J. H. Fry's slation of the problem as to how to adapt St. Matthew's Church Institute, Willesden, for use as a hospital; and the plans of the Moabit War Hospital at Berlin, erected forty years ago during the Franco-Prussian campaign, and still in occupation, although in parts consisting of temporary buildings, some of which were now being reconstructed.

Col. Hodgetts, of the Canadian Duchess of Connaught's Hospital at Taplow, in opening a discussion on the lecture, said the special advantage of the batterfly plan of hospital construction was to secure the utmost amount of sunlight on every ward. They believed that the wind screens would provide abundance of air without draughts or dirt. At the Eastern Hospital at Cambridge he found that, in spite of the closely-drawn blinds, over the open south fronts the rain blew into the wards, and even on to the patients' beds in the south row in each ward. At Taplow, half the patients slept out of doors on the verificals in summer time, at which season they were able practically to double their sleeping accommodation. Other buildings were yet to be added to the hospital, in which they hoped to avail themselves of the latest improvements. The question of cost had not been a vital matter at Taplow, but it was southt to secure the utmost comfort that could be provided for the patients.

Dr. W. Scott Tebb, as a medical officer, could not agree with the last speaker. Economy of construction and alministration was a very important point, and ought to be closely studied in planning and maintaining military hospitals. He endorsed all that Al. Saxon Snell had said as to the enduring value of fresh air in treating disease or wounds. Fresh air and sunlight were more efficacions than any doctor or nurse. He would enter a plea for the beneficial effect, too, of aesthetic considerations. Pleasant surroundings and flowers in the wards contributed much to the cheerfulness and recuperative powers of patients.

8 r Henry C. Burdett said the site selected for a hospital building was of first importance. The temporary wards at St. Thomas's furnished a peteworthy instance where a naturally poor site became of the utmost value, because the structures so quickly built upon it were administered from a well-organised hospital. The aim of those premoting a temporary hospital should be not to employ an architect hospital should be not to employ an architect hospital should be not to employ an architect hospital should be an architect hospital should be able to the skilled expert who had already devoted much study and attention to the subject, and who knew the latest views upon the question, and was able to improve upon what had already been done. The attempt to idapt schools and mission-halls as hospitals was boand to be a failure, and to inflict neclasses risks and inconveniences on staffs and patients abile. The provision of ample air and see light and of wide spaces around the wards had its reward in the economy of time strent in hospital by patients, and in diviating the necessity to send them on to convalescent homes. It was clear that the expenditure per bed on temporary hospitals would tend to fall.

Mr. Moon remarked that a century ago the freedom from hospital fever of those who were treated on the field of battle was recognised by Crevy and other leading masters.

Miss Richardson held that the time had by for great metropolitan hospitals in led districts. The aim would be to scenre crowded districts. sites in rural districts affording plentiful fresh air and sunlight.

The Chairman remarked that much had been done, at very short notice, to provide temporary hospital accommodation for our wounded soldiers and sailors. It would be wise in future years to look ahead and provide temporary buildings in open spaces rather than to hastily adapt inappropriate buildings

in the heart of London.

Mr. Saxon Snell, in acknowledging the vote of thanks, which was carried by acclama-tion, said he had not been convinced by Col. Hodgetts as to the merits of the butterfly

form of ward planning.

## "SPRAOLITE" AND THE MASCON HEALTH SPRAYER.

The necessity for the constant use of a powerful antiseptic to destroy the many germs which are always surrounding us is universally admitted, as it is well known that they

become particularly harmful in a vitiated atmosphere. We have therefore much pleasure in drawing attention to "Spraolite," ing attention to "Spraolite,' which is non-poisonous and leaves no stains and which clears the air of all harmful germs and smells, leaving a retreshing scent behind. This preparation, which is far more active than carbolic acid when tested against the typhoid germ, is made in eleven odours, pink may, pink carnation, jonquils, lavender, blush rose, pine violet, eau de cologne rose, pine violet, eau de cologne, magnolia, sweet pea, spinol, and sweet briar, all having antiseptic value of a high order. It can also be supplied odourless if desired. The best means of using "Spraolite" is by means of the Mascon Health Sprayer, which is illustrated herewith. This is illustrated and neutable and light, strong, and portable, and gives a continuous, mist-like spray, consisting of air and liquid, readily floating through the atmosphere absorbing the dust, killing germs, and rendering the air pure and health-giving. "Spraolite" and

the Mascon Health Sprayer are used in a very large number of the principal colleges, schools Government offices, hospitals, sanatoriums, drill halls, sick rooms, factories, theatres country mansions, banks, high-class cinemas. clubs, dance halls, infirmaries. In fact, in any place where the air is likely to get vitiated "Spraolite" will give instant relief. "Spraolite" will give instant relief. It clears away all smoke and unpleasant odonrs, and leaves the air pure and invigorating. A well-known bacteriologist revigorating. A well-known bacteriologist reports: "I have tested 'Spraolite' for its germicidal efficiency in aqueous solution by the Rideal-Walker or drop method. I find that it has a carbolic acid co-efficient of 4-5 which indicates that under the conditions of the test 'Spraolite' has a germicidal efficiency four and a half times that of carbolic acid." 'Spraolite' which ' certificate of the Institute of Hygiene, is on the market by Messrs, B. Maslin Bros., Sgray House, 34. Clerkenwell Road, London, E.C., and should be in use in all institutions where the air is likely to become polluted from crowds or other causes

Mr. William James Harding, a local sanitary engineer and builder, has been elected Mayor of Banbury. A sewage-disposal scheme the borough, costing £40,000, is at present being carried out.

Mrs. Solomon D. Sassoon laid the foundation store on Sunday afternoon of the new London Jewish Hospital, which is being erected on Stepney Green at a cost of £33,000. It will be the second Jewish hospital in England, there being one at Manchester.

Mr. John Evans, for the past twenty-seyears sanitary inspector under the Stafford Corporation, and previously for eight years a member of that body, died on Wednesday las in his seventy-fifth year. He took a prominent part in the work of the Sanitary Inspectors' part in the Association.

THE OLD CHURCHES OF YORK "The Old Churches of York" theme of a lantern lecture delivered by Mr Berson before the members of the York Philosophical Society in the Tempest Anderson Hail on Monday evening in last week. Alderman Sir Joseph Sykes Rymer presided The first church built in York, according to reliable data was, said the lecturer, tounded in 627, when King Edwin, having embraced Christianity, erected a church in the street adjoining his palace, within the old Roman willed-in camp, which was the beginning of York Minster. Some five years later the King decided to carry out Gregory's project of an Archbishopric at York, and began to build a stone church—the earlier one being of wood-suitable for the needs of the province Before the stone church was completed King Edwin fell in battle, and York was occupied by the pagan Cadwallon, who was eventually defeated by Oswald. King Oswald founded t new see on the isle of Lindisfarme, but he completed, however, at York the stone Minster which was now subject to Lindis-faine. It was not until 735 that York was faine. made an Archbishopric, and the stone Minster became the mother-church of the province. About half a century later a new cathedral was built, the concrete foundation of which was laid bare during the last century. The second Church of York was probably built by the Archbishop in his own shire, the edifice now known as St. Mary's, Bishophill Junior. A portion of the west wall still existed and A portion of the west wall still existed and its thickness, materials, and workmanship proved its great antiquity. Three or four other churches apparently arose in York during the Anglian period. Some were probably built of timber and covered with thatch, and in the churchyards were stone sculptured slubs and crosses. York fell to heathen Danes in 867, but Christianity revived under the glorious King Athelstan, revived unit.

Another revival took place under Edward the Confessor, when a tower was added to the Church of St. Mary Bishophill Junior, which the blackest tower in York. In the Thurch of St. Mary rosnopana was the oldest tower in York. In the Anglo-Danish period there were built to Mary Castlegate; St. Mary, Bishopshill Senior: Christ or Holy Trinity, Micklegate: and St. Gregory; and on the other side of the river Holy Cross During the interval of seventeen years between the great fire of 1069 and the Domes day Survey, the churches of St. Crux and St. Mary's, Castlegate, had been rebuilt, and new churches were crected to St. Andrew. St. Michael (Spurriergate)—where the curfew bell is still rung every night at eight-and to St. Andrew, St. Saviour, St. Martin to St. Andrew, St. Saviour, St. Martin (Coney Street), All Saints', Pavement, and St. Cuthbert, St. Olave's Church was unin-jured by the fire. Other churches built by he Normans were St. Helen, Stonegate: All the Aormans were St. Helen, Stonegate: All Saints', Fishergate: St. Andrew's, Fisher-gate: St. Stephen, Walmgate: St. Michael (le-Belirey), St. Denis and St. Nicholas, whilst St. Clement's Church agose on the Archbishop's land across the Guse. Mr. Ben-son gave un interesting survey of the archi-tectival in the street of the region of the property tectural features of the various old churches, Norman, Transitional, Early English, Per-pendicular, and Georgian, as well as refer ring to the churches which were destroyed during the 14th, 15th, and 16th centuries. The two edifices of St. Andrew and Christ Church were now disused as churches. nave of the former had been used as a school-furniture warehouse, and was now a mission room, while the chancel was now a a dwelling-house. St Helen's, the only surviving church in York of the four dedicated to the mother of Constantine the Great was occasionally used for service. The churches of St. Maurice and St. Lawrence, except the tower, had been removed and new ones built, and that of St. Crux was a mission room. There were twenty-two ancient churches York. They had a character peculiarly their own, being mostly small and of no great height, but each was worthy of careful study. The most conspicuous tower was that of All

were renowned for their painted Mediaval Many of the York churches had been mutilated for so-called street improvements. Churchyards had been added to the streets, and the adjoining church walls shorn of their buttresses, whilst chancels had been shortened or swept away. This damage to the ancient works of art in our streets was to be deplored, since the street improvement could have been as easily achieved by the setting back of inferior buildings on the opposite side of the road. The churches stood for lofty ideals, and as we passed them in our busy streets they silently reminded us of our duty to one another, and thus made their preservation the more desirable.

#### WAR RISKS TO PROPERTY

On Thursday Mr. Sydney A. Smith (Messrs, Weatherall and Green; read a paper at the Auctioneers' and Estate Agents. Institute on

war risks to property. The lecturer remarked that he had not yet met with any ante-war insurance lease which provided in express terms for the contingency of war damage, although in the case of a property in the City of London which was let to a German firm in 1912 for a term of 21 years a request was made by the lessee during the negotiations that the leases should be determinable at three months' notice in the event of war with his country, which at the time was regarded as so absurd a suggestion that it was not given serious consideration. After refering to the terms of insurance offered by underwriters and by the Government, Mr. Smith went on to say that all difficulties which the fire offices experienced were referred to the War Risk Insurance Committee, and he be-heved that about 150 rulings had been given. In the settlement of claims the practice adopted under fire policies had been followed. No new principles of valuation of loss had arisen for consideration. If the loss could not be agreed with the loss surveyor or the Government, it was uncertain what remedy the insured would possess. The term in the policy his Majesty's tovernment was a vague description, and a lawyer would be in doubt whom to sue. Possibly some plat of the Atorney-General or petition of right from the King might be needed. The author discussed the responsibility as between landlord and tenant for the reinstatement of aircraft or other war damage. Express covenants to repair and to maintain the property and so de-liver it up would, it was thought, include this responsibility. Many lessees would resist the liability very strongly on the ground that the risk was never forescen when the lease was made, but the action of the King's enemics would not override that which was a matter of positive contract. If the lessee wer terms excused from "inevitable accident was perhaps likely that a bomb risk would fall within the exception, and such claus, operate to excuse him. Tenants who are not under covenants for the maintenance of the property still found the position unsatisfactory, as it was generally assumed that any tenant would in law be liable to continue to pay rent, even though the premises were rendered uninhabitable by enemy damage. The cost of insuring rent would be so small that it should never be neglected by tenants. There was an old law case dating back to 1647. Jardine v. Jane, in which it was held that a tenant was not excused from paying rent by the fact that he had been empelled from occupation by Prince Rupert's army. Under Mark v. Cooper (1727) a tenant was liable to pay the rent although the prearmy. Under Mark v. Cooper (1727) a tenant was liable to pay the rent although the pire mises had been burned. Where mortgages were in existence before the war many mort was a liable to be a likely mortgagers with regagees had served their mortgagers with requests to effect insurance. Where a lease was near its end, particularly 99 years' lease, it seemed unfair that tenants s'ould have to insure, the effect of which might be to present to the freeholders a new house at the end of the term. It would be very satisfactory if a record were to be kept of the damage which occurred from aircraft, with a view of presenting a bill to Gormany at the end of the war. ---

Saints', Pavement, which had been copied from the tower of St. Dunstan's, in Fleet Street, London. The finest of the York churches was that of St. Mary's, Castlegate, with its lofty spire. Many of the churches, estimated cost of the buildings is \$400,000.

Data Partie Coast Matine transparence 150 ft

Partie Coast forests, and are unsurpassed tor pulp manutacture, and Norway pine, all grow in Canada is well as the United States), the first three in British Columbia, the latter two in Eastern Canada. The Douglas fir and western hemlock specimens used in the test came from the Partie Coast forests, and are identical with Partie Coast forests, and are identical with Partie Coast forests. The longleaf. British Columbia timbers. The longleaf, shortleaf, and loblolly pines, which are mixed and sold together in the market under various names, such as longleaf, southern, yellow or pitch pine, are confined to the south-eastern part of the United States.

Examination of the table shows that Douglas fir and western hemlock, each com-laming the qualities of light weight and great strength, are among the world's best struc-tural timbers. In two of the most important tural timbers. In two of the most important directions of strength—namely, resistance to cross-bending and resistance to crushing—Douglas fir heads the list, while western hemlock in all cases ranks high. For its weight, Douglas fir is the strongest of all the woods, with western Lemlock second.

In the tests quoted here the longlest pine timbers tested were partially seas red, and consequently the strength values given greater than would be found in the roughly green wood. The test material from all other species was thereaghly green. This explains in part the apparently greater strength of long-bad pure in one or two directions as com-

I. Strongest .- Douglas fir, longleaf pine. Size for size, these two average about equal in strength; weight for weight. Douglas fir is considerably stronger, because it is about 20 per cent lighter than longleaf pine.

Intermediate.-Western hemlock, western larch, loblolly pine, shortleaf pine,

#### 3. Weakest.—Norway pine, tamarac. DIMENSION TIMBER AND BOARDS.

Owing to its great strength, durability, lightness, cheapness, and the fact that it can be obtained in any size, Douglas fir is pre-eminently suited for all dimension material. beams, joists, scantling planks and boards needed for any purpose in any kind of build-

ing, whether exposed or not to the weather.
Western hemlock, because of its strength, lightness, and ease of working, is also excel lent for dimension stuff and boards, though less durable than Douglas fir when exposed to the weather. Spruce hoards are very suitable for inside uses where great great strength is not required, being light, soft, and easy to handle. Western red cedar is not so generally used for common dimension material and boards, because Douglas fir and material and boards, because boughs in and western hemlock are harder, stronger and cheaper. Cedar is, however, very useful in construction work wherever durability or light weight is the main consideration, as, for example, where wood is to be used in contact with the soil.

#### SHINGLES.

The western red cedar shingle is unexcelled as a roofing material. Nothing else compares with it for durability, cheapness, comfort and beauty.

Many instances are found in which the red cedar shakes (shingles split by hand), with which the early buildings in this province were covered, are in an excellent state of preservation after having been in service since the early "forties" and vice since the early "
"fifties." In other instance In other instances shingles have remained in use after thirty to thirty-five years' service. Sawn cedar shingles, with-out paint or treatment, last from twenty to thirty years, according to the situation in which they are used, the general reason for repairs being the rusting-out of wire nails used in roofing. The use of zanc. copper, galvanised, or cut iron nails overcomes this difficulty and greatly lengthens the life of the roof. Zmc or zinc-clad nails are perhaps the best, price and durability considered.

Shingles sawn edge (or "vertical") grain will lie flat, and will not warp or twist even after years of exposure to the elements. British Columbia edge-grain shingles are the highest quality of slungle sold, and practically the entire output of the province is

edge-grain material.

Dry light wood is almost a non-conductor of heat or cold. Western red cedar is one of the best natural non-conductors known. or commercially available, because it is unusually light, is by nature a dry wood containing no pitch, and is impervious to rain or wind. A western red cedar roof is cool in summer and warm in winter.

Very attractive architectural effects can be secured by the use of red cedar shingles. This is particularly to be noticed on the Pacific Coast, where the shingle is not only the predominating roofing material, but is used with charming effect as an outside

wall covering.

The remarkable durability of red cedar makes preservative treatment of the shingles unnecessary, but if desired, they can be aumecessary, but if desired, they can be easily stained or painted in any shade or calour, and beautiful colour schemes may be obtained in this way. Stains or paints can be applied with a brush to dry shingles after laying, by which means a superficial covering of the exposed part of the shingle may be obtained. Shingles can be more thoroughly treated by immersing in crossote at about the temperature of boiling water. Dry shingles should remain in this for about thirty minutes, but in the case of green material the time should be extended to an hour or more Any of the common colours, ground in all, can be mixed with the creosote.

British Columbia red cedar, in the form of bevelled siding, shingles, and trim, is an wood is well adapted to panelling.

exceptionally good interior finish for walls of buildings. Besides its natural durability, cedar bevel siding holds its form, is well manufactured, and takes paints and stains very satisfactorily. It nails easily without splitting, and is free from pitch. For the foregoing reasons, and because it is easy to work, has a straight and even grain, and is particularly suitable for turning, western red cedar is superior to any other wood of North-Western America for columns, balusters, and turned novelties.

Sitka spruce makes excellent siding, being sift, light, easily worked, free from pitch, with attractive grain, and taking stain and paint readily.

Douglas fir and western hemlock are also both suitable for siding, and the former wood is very widely used for this purpose.

#### WINDOW SASHES AND DOORS.

Douglas fir is used to a greater extent than any other wood by the sash and door manufacturers of British Columbia. In fact, most doors used on the Pacific Coast of America are made from Douglas fir. It is easily worked, presents a hard surface, is strong and durable. Even the clear and No. I grades, which are used in this work, are inexpensive, and there need be little or no waste in cutting out material. Edgegrain stock, which is easily obtainable, is used for the frames.

#### FLOORING.

All Douglas fir flooring is sawn edge-grain, and the hardness, wear, resisting qualities and ease of working of the wood. combined with its beauty of grain and ability to take a high polish, have led to its extensive use. It is very popular as a house floor on account of its beauty and cleanliness; it is especially attractive in the form of a parquetry floor. It is equally popular and in general use for factories, warehouse. and other places where it is subject to hard usage, because of its great strength, resistance to wear, and cleanliness. Western hemlock, when out edge-grain, also makes an excellent flooring material. It finishes smoothly on account of the uniform texture of the wood, and it also wears evenly. It is not suitable for use in damp places on account of its tendency to warp under such conditions.

#### PANELLING FOR WALLS AND CEILING.

No form of interior finish compares with wood panelling for beauty, comfort, cleanliness and cherpness combined. It is gen-Northerally used all through the Pacific west, and is huding great tayour wherever introduced elsewhere. The old-fashioned painted door is being replaced by doors with panels of slash-grained Douglas fir or hemlock, finished in the natural wood so as to bring out the full effect of the beautiful forming out the run enect of the beauth of figuring. Plaster and paper-covered walls, partitions and ceilings are likewise giving way to wood panelling. The all-wood room gives the utmost in beauty and comfort. Unlike many other woods used for panelling. British Columbia woods, especially Douglas fir and western hemlock, can be finished in a great variety of ways. Many different coloured stains can be applied and dull or bright surface secured. Douglas fir is the favourite panel wood on account of its beautiful grain and figuring when slash-cut or veneer-cut, and because it takes stain so well.

Western hemlock makes a desirable interior finish, as it is easy to work, readily turned, and its straight, even grain makes it free from brashness and tendency to chip or splinter. It is one of the most orna-mental woods for office or home interiors, takes strin readily, and is not easily dented. Western red cedar makes a very desirable interior finish because of its ability to hold its shape and retain a smooth surface. In natural colour the wood somewhat sembles mahogany, although, of course, it is much softer and lighter. It has a distinc-tive silky finish and takes stain well. Slashcut sitka spruce has an attractive grain or figuring, and the soft, silvery, easily worked OTHER INTERIOR FINISH.

This includes all the minor kinds of interior finish, such as wainscotung, shelving, moulding, casing, baseboards, etc.

Douglas fir is in most general use because of its attractive grain, abundance, and cheap-ness. Western hemlock, sitka spruce, and western red cedar are all used, however, for different purposes in accordance with their respective qualities.

#### BRIDGE, TRUSS, AND TRESTLE TIMBERS.

Douglas fir is the standard timber for the construction of wooden bridges, trestles, etc., owing to its great strength and stiffness, bility, comparative lightness, the large dimenin which it can be obtained, and its abundance and cheapness.

Western hemlock is also very suitable for purposes where the maximum of strength is not required. It is not quite as strong as fir, but is lighter, and, therefore, easier to handle. It is obtainable in large dimensions.

Western red cedar, because of its remarkable durability, is sometimes used in positions where ordinary wood quickly rots, such as sills or foundation beams in contact with the soil. Fir, hemlock, and spruce treated with creosote or other preservative are also used under such conditions. Where a heavy load borne, Douglas fir and western hemlock are, of course, especially suitable because of their greater strength and resistance to compression.

#### PILING AND CRIBBING.

Douglas fir is most widely used for piling and cribbing. Its valuable qualities for these purposes are its very long, straight, slightly tapering trunk, its strength, resilience, and comparative durability. The wood is hard enough to penetrate most soils, and stands the hammering of the piledriver well. Only where hard subsoils are to be penetrated is it necessary to band the tops to prevent brooming and splitting.

Western hemlock, sitka spruce, and western red cedar also make good piling and cribbing. Hemlock is strong, and is durable if given preservative treatment. Sitka spruce is suitable for use where great strength s not required, and, like hemlock, is durable if treated. Western red cedur is naturally very durable, and is valued also for its light weight and excellent form, but its greater cost and lesser strength as compared with Douglas fir and hemtock restrict its use.

Teredos and other marine borers are the worst enemies of piling, and will attack nearly every wood that is not creosoted. Untreated piling lasts from three to six years. Cresosoted Douglas fir piling has remained sound for twenty to thirty years in salt water on both the Atlantic and Pacific coasts of North America. Piling intended for permanent work should always be treated with a preservative or protected in some other way against marine borers. Creosoted piling and cribbing of all kinds can be obtained in British Columbia.

POLES FOR TELEPHONE, TELEGRAPH, AND POWER TRANSMISSION LINES.

Western red cedar is more widely used, suitable, and popular for poles than any other wood used without preservative treat ment. This is because it best meets the requirements of great durability in contact with the soil, lightness, and suitable taper. Because of the great size to which the tree grows, poles can be obtained from it of greater length than in any other species of

equal durability.
Douglas fir, western hemlock, and sitka sprace, though naturally less durable in contact with the soil than red cedar, meet every other requirement for poles. Durability and long life can be ensured in these species by treating the butt ends of the poles with some preservative, as creosote. Douglas fir is especially suited for positions where great size or strength are required. The largest and best wooden flag-poles are obtained from the fir forests of the Pacific slope. will probably be the tallest pole in the world is the one to be presented by the lumber-men and Government of British Columbia to Kew Gardens. This flag-pole, which is now awaiting a ship capable of carrying it, is long, 33 in. in diameter at the butt, and 12 in. at the top.

## Our Illustrations.

N. 48ES LONDON HOSPITAL, WHITECHAPEL.

I sale daily, which provides additional as a quarters, is in course of erection in st. Maint Street, Whitechapel, Considerdiscrest it regard to it arises from the that her Mojesty Queen Alexandra, the s tent of the hospital, has desired Lord asford, the chairman of the hospital, to K Astord, the chairman of the hospital, to account the Edith Cavell Home "instead of dos guaring it the "Alexandra Home," as originally intended. The building has a frontage of about 130 ft. to East Mount Strict, with a return frontage of 47 ft. to Oxford Street, facing the Luckes Aursing II we. It consists of eight floors, including the bisement, and has accommodation in separate rooms for 110 murses, twelve sisters, i twelve servants. The basement, surrounded by wide areas, is well lighted, and evitains the heating chamber, the accumulate room, the coal cellars, servants' rooms, t cother with a servants' sitting room, sculbry, linen store, larders, bathrooms, and bryatory block detached. The ground floor entains, in addition to the sisters and curses rooms, a large nurses sitting-room and library, visitors' room, three bathrooms, and tearoom. The upper floors consist entirely of sisters' and nurses' bedrooms. Each i these rooms is provided with a litted ward robe, similar to the other nurses rooms in the hospital. Each floor is provided with a bar washing room fitted with a special electhe blower for the use of nurses in quickly bansing and drying the hair, as fitted up the older parts of the hospital. Each ase and large electric lift, also with a boot from, three bathrooms, and a detached lava-try block. There are also additional escape staircises provided at each end of the build Staticties provided at each end of the number 2. The attic floor is used as a box room but it also contains separate iron lockers for the use of each nurse. The premises 200 erally are constructed of non-combustible materials, the floors being composed of concrete carried by steel joists. The inside storeases are constructed of ferro-concrete covered with terrazzo mosaic, thus avoiding the use of hearthstone, which is found object coable in practice. Hot-water radiators are provided throughout, with coal stoves in the set no rooms, and the building is lighted by bestranty. The room floors are covered with colemn on a prepared cement surface; the the property of the whole of the main hospital built-the whole of the main hospital by means of a covered bridge across East Mount Street, so that the whole of the main hospital builtare approached without exposure to the resulter. Architecturally the design of the building is very simple, being somewhat Georgian in character. The ground floor willing is faced with red bricks, and above with 12 is laced with red bricks, and above that with mingled be else. A small quantity of artificial state is used for the dressings, and the roof is covered with green slates. To architects are Messis, Rowland Plumbe and Partners, and the work is being carried out by Messis, Perry and Co., the constitution or by

The paved path to the front door is some 70 ft, long, and the first part of the garden behind is land out with stone-paved paths and forms a small rose garden. The builders were Messrs. T. Rader and Son, of Southwark and Cluslehurst, and the drawings were hing in this year's Royal Academy. Mr. E. J. May, F.R.L.B.A., was the architect.

### MILITARY EMERGENCY HOSPITAL.

These plans, grouped on one of our double-page illustration sheets to day, together with the plan printed with our report of Mr. Alfred Saxon Snell's Chadwick slecture on "Military Emergency Hospital Construction," page 552 et seq., were chosen from the series of examples exhibited last Wednesday in Wimpole Street, W., at the Royal Society of Medicine on the occasion of this lecture. Mr. Snell alluded to all these hospitals, so there is nothing to add save to record their titles and architects names:—The Queen's Canadian Military Hospital, Beechborough Park, near Shorn-cliffe, Kent; Mr. W. Henry White, architect—plan, block plan, and section. The 5th Northern General Hospital, Leicester, openair wards; Messrs. Everard, Son, and Pick, architects—plan of one ward, block plan, and detailed section. The Military Emergency Hospital Ward Office model plan—block plan, plan of ward, a general section showing spacing and detail section. Norfolk and Norwich Hospital Military Emergency huts—plan of ward, block plan, and sections. War Hospital for Wales, Netley—general plan; Mr. Edwin T. Hall (Messrs, E. T. Hall and Son), hon, architect.

# IMPERIAL HOUSE, IN THE OCCUPATION OF THE WAR OFFICE, TOTHILL STREET, WESTMINSTER.

These premises have been recently completed, and are now occupied by the War Department The building was designed as a block of professional offices and for com-mercial business, but is devoted to a different purpose, and one for which the accommodation is well adapted. The work is of steel frame construction, the main elevation to Tothill Street being faced with stone. The Dartmouth Street front is 170 ft. long. design of the main front carries on the lines and general character of the adjoining build and general character of the adjoining building. Caxton House. A prominent feature is made of the entrance portico, with its very successful sculptured figures, by Mr. L. F. Roselieb, R.B.A. This portal is shown by a larger photograph, The architects are Messrs. Metculf and Greig, Kingsway Chambers, and the general contractors were Messrs. Lorden and Son, of Tooting, S.W. The lifts are by Messrs. Waygood-Otis, Limited. A photograph is given of the vesti-A photograph is given of the vesti bule. Below the general view of the building in Tothill Street we reproduce two plans showing the extent of the premises, which give an office area of 8,009 sq. ft. on the ground floor alone. The total area of the whole block, exclusive of corridors, is set down at 54,993 ft. super.

In view of present circumstances, the committee of the Surveyors' Institution have reluct antly decided that it will not be practicable to hold the usual Junior Meetings this session.

The alterations to the Grand Pump Room at Bath, which was re-opened on Monday in last week, have been carried out from plans by and under the direction of Mr. Alfred J. Taylor, M.S.A., of Bath, architect to the Baths Committee.

#### OBITUARY.

Mr. George Morgan, 24, King Street, Carmarthen, died on the 5th mst., within a few hours of completing his eighty-first year. Mr. Morgan was one of the oblest architects in South Wales, and during the last fifty years designed a great many buildings in nearly every county in Wales, including Monmouthshire. He acted as architect to over twenty-eight school boards, and designed no fewer than eighty schools, both secondary and elementary, in Carmarthenshire and the adjoining counties. He was responsible for the planning of numerous Nonconformist chapels, one of the largest being at Newtown, Montgomeryshire. During the last thirty years he was associated with his eldest son, Mr. J. Howard Morgan, F.R.I.B A., who continues the practice, and during that time many important commissions were undertaken, among them being Bush House, the Pembrokeshire seat of Colonel Sir Thomas Meyrick, C.B.; Penrallt, Cardiganshire, for the late Mr. W. G. Reddie; Rhosygilwen for the late Mr. J. V. Colby; Cilwendeg for the late Mrs. Sannders-Davies; and other country residences. Bank premises were erected in various towns for the London and Provincial, Lloyds, and the London, City and Midland hanking companies. Mr. Morgan is survived by three sons and four daughters.

The sanction of the Local Government Board has been given to loans to the Corporation of Derby of £1,927 for distributing mains and £2,043 for electric motors.

Sir H. A. Farrington will succeed Mr. C. E. Muriel as Conservator of Forests, Bengal, from January 3 next, when the latter proceeds on long leave preparatory to retirement.

The Kantuck Rural District Council have received the sanction of the Local Government Board for Ireland to the borrowing of £1,490 for the erection of labourers' cottages.

Mr. S. C. Brittingham, A.R.I.B.A., of Melbourne, has been promoted to the office of Acting Government Architect in the Public Works Department of Victoria. "Mr. Brittingham has been in the service of the State for many years, and his work has been characterised by marked ability," remarks the Journal of the Royal Victorian Institute of Architects in recording his promotion.

Architects in recording his promotion.

All points regarding the purchase by the Morpeth Town Council from the Countess of Carlisle of the town hall and other properties have been settled except the condition that no intoxicating liquor should be sold, distributed, or consumed on the premises. The council will take a plebiscite of the ratepayers on this point. The purchase money has been agreed at £4,500.

Mr. John Howard, of Brighton, has decided, as a memorial to Miss Cavell, the heroic murse, to build at Brighton and endow twenty-four cottages, at a cost of £30,000, for the free use of trained hospital nurses who are unable to follow their calling. The cottages are to be built on land adjoining the convalescent home built and endowed by Mr. Howard at a cost of £40,000, and now used as a military hospital.

At Matlock on Wednesday, Mr. H. S. Bidwell held an inquiry on behalf of the Local Government Board with regard to the request of the urban district council for further powers to raise loans to continue and complete the scherage scheme. By order of the Treasury the power to borrow a further £12,000 to go on with the scheme had been deferred pending a visit of an engineer to the works. It was explained that £45,000 was granted for the work, and £32,000 had been expended. A sum of £24,000 had been asked for, and the Local Government Board granted £12,000. If the scheme were stopped now it would mean losses all round.

The work of restoring Chiehele College, Higham Ferrers, is now finished, the benefactors being the late Dr. John Crew and his brother Mr. Josiah Crew. The style of the architecture as well as the badge of Henry IV., which appears in the cornice on the south side, give the approximate date of its erection (1390-1400). Its original purpose was that of a Chantry Chapel—probably it is the Jesus Chapel mentioned in the old records in connection with the church. It certainly was never a refectory. Portions of the piscina and of the rood staircase remain in the south wall. The college was founded by Archdeacon Chichele, who was a native of Higham Ferrers.

# Currente Calamo.

His own well deserved reputation, and that of his able father, doubtless sufficed to attract the crowded audience last Thursday at the rooms of the Royal Society of Medicine to profit by Mr. Alfred Saxon Snell's able Chadwick Lecture on Emergency Military Hospital Construction, which we are glad to be able to illustrate as fully as our space will permit. As in regard to other Departments of the Government, most of us, the War Office possibly excepted, have certainly been struck by the wide differences in cost of some of the hospitals built. We have come across no cases yet in which, as has been alleged with some of the huts, generous contributions to battalion funds are said to have been made by contractors, so that cannot account for it. Some of us also have wondered, perhaps, at the absence from the lists of architects employed of names of some who have been regarded as hospital specialists. Probably the War Office is unfamiliar with their existence. The whole subject is of the highest importance, and we incline to regret that the R.I.B.A., instead of closing down its meetings, did not secure temporary accommodation elsewhere, as the Chadwick Trustees had to, and fill the bill throughout the first half of the session with a series of papers thereon, in which fuller details still might have been rendered by the architects of the buildings concerned. They would have been appreciated. There were as many architects among Mr. Saxon Snell's hearers at Wimpole Street last Thursday as gathered to listen to their President at the R.I.B.A, meeting on Monday fortnight.

We have received from the Commonwealth of Australia a report by Mr. Walter Burnley Griffin, the selected architect and now "Federal Director of Design and Construction" of the proposed new capital, Canberra, accompanied by a preliminary plan. These were prepared two years ago, and readers are familiar therewith. We have also received a bulky budget of correspondence during the past two years between Mr. Griffin and the various officials of the Federal Government. from "Home Minister" downwards, from which it is evident that, as here at home, the traditions of the Circumlocution Office still prevail whenever an unfortunate architect is fair game for Jacks-in-office. Some of the letters are very funny, but Mr. Griffin seems to be holding his own so far as may be gathered from the following, dated June 18, 1915 :--

The Honourable the Minister for Home Affairs, Melbourne.

Sir,—I have had an opportunity of partially inspecting the file of correspondence laid upon the table of the House, and find that it largely comprises adverse representations and recommendations by dearthmental, officers, when his works with prises adverse representations and recommendations by departmental officers upon my work, with minutes by you, in relation to the whole of which I have had absolutely no previous knowledge. I am surprised that these should have been placed upon record without giving me the privilege of perusal, since you were entitled to know that there is an entirely different version.

Further, the file is incomplete. I could find none of the documents relating to the withdrawal of my chief assistant nor reference thereto.—Yours truly,

W. B. GRIFFIN.
Federal Capital Director of Design and Construction.
"Incomplete or not, the present batch of letters fills 133 pages, and has cost the Commonwealth £75 to print. By the time Canberra is built it strikes us as probable that some weary chronicler will wind up the record with some such words as conclude John xxi.

Up to June 30 of this year the expenditure which will pay them the rent owing, while that there was no evidence to show fer what on the building of Canberra amounted to Maple's have got their hired furniture back purpose Fergusson took the veronal. Up to June 30 of this year the expenditure

£691,201. This does not include the purchase of land. The heaviest outlay has been in connection with water supply, which has cost £196,000; on the power plant the expenditure has been £66,000; on buildings, £73,000; on roads and bridges, £91,000; and on the railway from Queanheyan to Canberra, £35,000. In all. 383,660 acres of land have been compulsorily acquired, the gross revenue derived from the land amounting to £16,458. Work in the permanent nursery is now in full swing, and re-afforestation is also in progress. The sewerage works are reported to be making excellent progress, and the Staffordshire kiln brickworks are approaching completion. A proclamation will shortly be issued, taking over sovereign rights over about 18,000 acres at Jervis Bay.

The committee of the Builders' Benevolent Institution has again decided to pass the annual dinner, which, in ordinary times, would have been held this month. sponsibility of providing the means to continue the payment of pensions devolves upon the treasurer, the president, Mr. George R. Holland (of Messrs. Holland and Hannen and Cubitts, Limited), being still away on his military duties. An earnest appeal to readers, therefore, is made to send a special donation to take the place of the amount they would have given at the annual dinner. The only reliable income of the institution amounts to £700 from investments, and an average of £300 from annual subscriptions. The yearly payments to pensioners are over £1.900. To make up this deficiency of £900, special effort is necessary, and donations should be sent at once to Mr. Frank May, the treasurer, at Messrs. Holland and Hannen and Cubitts, Limited, Hyde Street, Bloomsbury, W.C.

Builders often let, if they cannot sell, their new houses to newly married couples, who buy new furniture upon a hire-purchase agreement. Then there is the rent to be paid and the furniture instalments. When trouble comes the question is usually whether the landlord or the hire-purchase people shall first get the furnitme. The recent case of Bence and Johnson v. Maple and Co., Limited, though not an example of this newness all round, shows what may happen in this race for the furniture. The plaintiffs, as landlords of a house at Hampstead, sued the defendants. who had sold some furniture on hire-purchase to the tenants, for trespass. It was clearly quite a near thing during the run. plaintiffs, as landlords, had applied for leave to distrain, as is now necessary during the war, which the county court judge refused. Then they got a key, took possession of the house, and ended the tenancy, their smart agent carefully locking up the place, but leaving the furniture there and the front door on the latch. Thereupon Maple's people took their turn, got another key from the tenant by persuasion, went in, and cleared out all their hired furniture. There were some neat and knotty points of law in the case, one being as to whether the landlords could distrain after having put an end to the tenancy, as this would affect their damages. After a two days' hearing, with full arguments and summing-up, the jury found there had been a trespass, and gave £50 as damages. There were other findings, but the landlord's right to distrain was found too shadowy for argument, even by the lawyers. So the curtain fell on this comedy of errors. leaving the plaintiffs, as landlords, in possession of the house, with a judgment for £50, which will pay them the rent owing, while

to sell again, and such instalments as were paid before the crisis. Still, as the landlords have judgment, with the costs of the action. they seem to have come off best in this legal scriffle. The tenant, indeed, remains, a sad vague figure of failure, in the background. but she can always tell and re-tell her dramatic little story of "The Two Latchkeys," and what happened to the landlords and the lawvers!

The Public Authorities Protection Act. 1893, was plainly and primarily intended to protect those authorities in doing their public duties. But corporations, councils, and the rest are always seeking to extend the scope of that statute for purposes of what may be called their private protection. It is satisfactory to find that, in the recent case of "Bradford Corporation v. Myers." this attempt has entirely failed. The judgment of the House of Lords, laving down first principles, will become a leading precedent, and so is of much interest to all contractors. builders, and others who have to do business with these public authorities. The corporation made their own gas, and so they had to sell their own coke. The case began in October, 1912, when the servant of the corporation, while delivering a ton of coke through the plaintiff's coal-hole in the pavement, broke his shop window. Plaintiff sued in the county court for damages, but did not do so until more than six months later. Then the corporation set up the technical plea that, as the action had not been brought within six months, they were exempted from liability under the Public Authorities Act. They succeeded in the county court; a Divisional Court of two judges was divided in opinion; then the Court of Appeal held that the Act did not apply; and now five Law Lords have confirmed this decision in favour of the original plaintiff and his claim for £17 2s. against the corporation. It is all very well to protect public authorities in the execution of their public duties under statute or otherwise; but when they take to making gas and selling coke on their own account this is a carrying on of business and not the performance of a public duty. So they were held liable to this action for damages in the same way as would be any other trader whose servants were guilty of negligence. ->----

A new church hall at Bolsover, buil at the junction of the Mansfield and Creswell main roads at a cost of over £1,000, has beet formally opened. The architects were Messrs Rollinson and Sons, of Chesterfield.

Mr. P. M. Crosthwaite, an inspector under the Local Government Board, held an inquiry at Battle yesterday (Tuesday) into an applica-tion from the urban district council for sanc-tion to borrow £950 for works of sewage dis-

Mr. Cuthbert Rodham Morris, of North Curry, near Taunton, agent to the Duchy of Cornwall Estates and head of Morris, Soys, and Peard, surveyors and auctioneers, who died on July 6, aged eighty-three, left estate of the val e of £170,885.

The death was reported to the Metropolitan Water Board on Friday of Mr. W. Morris, for over fifty years engineer for the K at district under the Kent Waterworks Co. and the Board. is retirement in January, has been receiving a £1,215 8s. per annum.

An open verdict was returned at the resumed An open verdict was returned at the resumed inquest at St. Paneras on Saturday respecting the death of Norman Sunart Fergusson, agod twenty years, a cadet in the Inns of Court Officers. Training Corps, and formerly an architect's pupil residing at Cathedral R ad. Cardiff. Dr. Frederick Womack, toxicologist, of St. Bartholomew's Hospital, stated that the cause of death was vertical poisoning. The jury returned a verdict accordingly, but added

HOME COUNTIES ARCHEOLOGICAL SOCIETY.—On Saturday attenuon the Home Canties Archaeological Society, under the guidance of Mr. Charles Welch, F.S.A., visited Cutlers' Hall, where they were welcomed by Mr. William Beaumont. The hall itself is modern, but Mr. Beaumont stated that next year will bring the 500th anniverv of the incorporation of the company. Welch said that the Old Hall was opened on May Day, 1664, but a few days later than the birth of Shakespeare, and that its destruction in the Great Fire of 1666 involved the company in a debt that took a century to dis-charge. The company existed for centuries before its incorporation, while the earliest known Cutler, appropriately named Adam, lived in the time of Richard I.

1NSTITUTION OF WATER ENGINEERS

-The twentieth annual winter meeting of the Institution of Water Engineers will be the Institution of Water Engineers was no held at the Geological Society's apartments, Burlington House, W., on Friday, December 10, commencing at 2.30 p.m., when a discussion will be opened on the necessity for defining the terms "domestic purposes" in the december 1 water Acts. The elecgeneral and private water Acts. The election of the president and council for the year 1916-17 will also take place.

THE ARCHITECTURAL ASSOCIATION THE ARCHITECTURAL ASSOCIATION OF IRELAND—At the opening meeting of the mneteenth session of the Architectural Association of Ireland, held at 15, South Frederick Lang, Mr. H. G. Leask, the newly elected President, delivered his inauguraal address. Mr. Leask referred to the fact that a constant of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the cont axth of the members were now serving their King and country, a very creditable number out of such a small roll of membership, which he understood reached 119. Dealing with the subject of "Architecture After the War," from a professional standpoint, the President said after the war stringent economy and heavy tryation were bound to have their effect heavy tryanon were made to the progress ungit halt it must not stop. They would probably see less in practice and in would probably see less in practice and in the building papers of elaborate costly coun try and town mansions, and more schemes for the provision of modest homes, and the production of labour-saying appliances contrived with the object of economising energy and expense. The aspect of social progress which most nearly appealed to architects was that of the housing of the masses. When the waste, regular and daily, not spasmodic, of child life the cities and towns was thought of, due as was to conditions of lite, not the least of which was housing, it was unthinkable that progress in social anichoration should be allowed to stop whatever the cost of continuance.

LEGAL INTELLIGENCE.

CLAIM FOR COMPLETION OF PUR CHASE OF ESTATE—KECK v. FABER—In this action, heard by Mr. Muir Mackenzie at the Reyal Coarts of Justice, the decision of the Official Referee, in the form of a report to Mr. Justice Nextle, was field on Widnes developed at the Reyal Coarts of Justice, the decision of the Official Referee, in the form of a report to Mr. Justice Nextle, was field on Widnes developed as we stated a fortunalit ago tp. 510). Mr. T. C. I. Pewys Keck, of Palliser Road, Bavon's Coart, W., saed Colonel Walter V. Faber, M.P. for Andover, on a contract dated March, 1913, to purchase the estate of Stoughton Grange, in Leicestershire. The price was £251,760. The allegation was that as the defendant had not exceeded over three weeks, and judgment was reserved. The Official Referee now found to at the sum of £26,522 13s. 2d was due to the plantiff as damages on the breach of content that am including £22,657 for actual disease. # Building Intelligence.

BRISTOL.—The annual report of the Couneil of Bristol University states that tenders having been invited for the lower and main buildings, it was found possible to make a contract for their erection, Mr. George Wills and Mr. Henry Wills guaranteeing £40,000 beyond their previously promised benefactions, to meet the increased cost of the extions, to meet the increased cost of the ex-tended buildings. A contract was entered into in May last with Messrs. Henry Willcocks and Co., of Wolverhampton, for the sum of £187,000, subject to certain omissions and of £187,000, subject to certain omissions and alterations, which are expected to reduce this amount by about £100,000. The work of demolition of the old Blind Asylum was accordingly commenced, and the foundations of the new building are already proceeding. Messrs. Paul and James, of Bristol, are the problems. architects

KNEBWORTH, HERTS.—The completed portion of the new church of St. Martin's, Knebworth, the foundation-stone of which was laid in 1914 by the Countess of Lytton, on a site given by the Earl of Lytton, was conon a site given by the Eari of Lytion, was consecrated last week by the Bishop of St. Albans. The church is being erected from designs by Mr. Edwin Lutyens, A.R.A., brother-in-law to Lord Lytton. It is in the Renaissance style, in red brick and stone. The portion which has been completed consists of chancel, c'ergy, and choir vestries, north and south transepts, and a portion of the nave, and has cost £4,000.

TILBURY.—In view of the great pressure of work in Tilbury, and of the increasing demand for houses for the housing of transport workers and others, the urban district council have decided to adopt an extended to account the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of th and continuous housing policy. At a special meeting on the 8th inst, the council appointed Messis. Pepler and Alleu, F.S.L., F.R.L.B.A. of Howard Honse, Arundel Street, Strand, as of Howard House, Arundel Street, Strand, as consulting architects, and Messrs, F. J. Winter, M.S.A., of 2, Heygate Avenue, Southend on Sea, and W. J. Wadman, of 71, Jerningham Road, New Cross, S.E., as acting architects, to act in conjunction with Mr. S. A. Hill-Willis, Assoc.M. hist, C.E.L., engineer and surveyor to the council, in preparing a scheme for the value pressure of the council, in preparing a scheme for the council of the council. ing a scheme for the erection of further houses up to the number of 500, in addition to the 150 now in course of erection, and arrangements are being made for the town planning of the whole district with a view to its deve-lopment on healthy and progressive lines. The houses being mainly required for transport workers, whose services are essential in connection with the war, it is probable that a Government grant will be applied for towards the cost of construction, such as has been granted in other districts where a large number of war workers are employed. We illustrated Messrs. Pepler and Allen's plans and elevations of some of the honses to be erected under the scheme in our issue of the 9th April last.

ARCHITECTS' WAR SERVICE. To the Editor of The Building News.

Sin.—It would no doubt add to the success of the R.I.B.A. War Committee's appeal if it was assured to all rejected candidates that some badge was awarded for their patriotic offer. Although physically fit many of us may be debarred by an age limit, and some recompense for our disappointment would be found in an armlet or a badge.—I am, etc.,

John Leeming. Westminster and Bromley, Kent, November 13, 1915. ---

The death of Mr Edwin Joseph Simpson took place at North Walsham on Saturday after a long illness, following an operation. The deceased held the positions of surveyor and inspector to the North Walsham Urban District Council for thirty one years, from which position he retired in 1912, and rate collector to the same hody for thirty-seven years, and assistant overseer and collector thirty-nine years.

LEEDS JOINERS' BONUS.—Sir George Askwith has presided over an important con-ference, held at the Board of Trade Offices, between seven representatives of the Leeds Joint Committee of the Carpenters and Joiners' Society and six representatives of the Leeds Master Builders' Association. The subject under discussion was the claim for a war ject under discussion was the ciaim for a war bonus made by the Leeds joiners, who number approximately 900. They have not yet been conceded any war bonus, and they have agitated for one during the last six months. Mr. Tom Heale, the senior Leeds society's delegate to the conference, stated in an interminant that the during of the conference. delegate to the conference, stated in an interview that the decision of the conference was for a bonus of 2s. 6d. weekly, payable at the end of the first week after the close of the conference. This is the sum paid as a bonus for some months past to carpenters in the shop-fitting trade, and the men's representatives accepted the decision at once. The employers' representatives stated they would be compelled to submit the agreement to their association for approval association for approval.

#### TRADE NOTES.

Under the direction of Messrs. A. F. Scott and Son, architects, Norwich. Boyle's latest patent "Air-Pump" ventilator has been applied to the new Primitive Methodist church. Carcroft, near Doneaster.

In the construction

sideration is directed by the authorities towards the vital question of the health of the future inmates. Many old houses are condemned because the walls are saturated with water. We learn that a house wall situated next a river at Bingley (Yorks) has been made absolutely water-tight with a Pudlocd cement rendering

water-tight with a Pudlocd cement rendering Messrs. D. Anderson and Son. Ltd., the makers of Rok and other roofing, whose announcement appears on page svii., have a unique record in manufacturing and supplying roofing felts. They supplied roofing to the British War Office during the Crimean War, and from August, 1914, to the present time have supplied many thousands of rolls of different kinds of their roofing to the Government for use on huts, hangars, hospitals, muintion factories, etc. Messrs. Anderson have had over sixty years' experience in the manufacture of Messrs. Anderson have had over sixty years' experience in the manufacture of roofing, and when it is considered that the enormalist their works reaches the figure mous output of their works reaches the figure of 60,000 rolls a month, the reader will have some idea of the immense demand for their goods. Their new booklet is excellently illusgoods. Their new booklet is excellently illustrated with photographs of buildings erected throughout the British Empire, all of which are roofed with their famous Rok roofing. A copy will be sent to readers who apply by postcard to Messrs. Anderson and Son, Ltd., Lagan Felt Works, Belfast.

#### PARLIAMENTARY NOTES.

ROAD IMPROVEMENT GRANTS. ing the discussion in the Commons on Clause 41 of the Finance Act, which provides that the charge on the Consolidated Fund for road improvement grants shall cease. Mr. Molteno moved that instead of the grant being abolished it should be reduced to £300.000 per annum. Hitherto, he said, the payment had been from £1,500.000 to £1,750.000 per annum. been from £1,300,000 to £1,700,000 per annum. The money, which came from the petrol and motor-car taxes, was necessary for road maintenance, especially as heavy road motor traffe had so increased owing to military requirements and to the fact that the railways were overburdened with traffic. He paid high tribute to the work of the Board, without which the main thoroughfares of the country would not have stood the strain of the next. would not have stood the strain of the past twelve months. Owing to the congested state twelve months. Owing to the congested state of the railways it was absolutely necessary to maintain the roads in a good state of repair, otherwise the ordinary life of the country would be paralysed.—The Chancellor of the Excheque and that the Road Board's funds amounted at present to over £3,000,000. The average expenditure in grants was about £400,000 a year, so that the existing funds would at that rate suffice for seven or eight years. Was it conceivable that the charge on the Consolidated Fund should be continued at present when the money would not be used?

Sir R. Adkins pointed out that owing to the increased wear of roads the Road Board grants had grown to £800,000 per annum.— The amendment was negatived, and the clause was duly added to the Bill.

# Our Office Table.

A special company for training candidates for commissions in the Royal Engineers and other special branches of the Service has been formed by Colonel W. Shirley, of the 28th Battalion, The London Regiment ((Artists Rifles), O.T.C. All applicants filling in the forms we published last week and willing to receive preliminary training in this corps should mark their forms "Will undergo train ing course." During training pay will be at Army rates for privates, with separation allowances on the usual scale.

The Governors of the Glasgow School of Arts propose to hold an exhibition of ancient and modern needlework, chiefly British, at the School of  $\Lambda$ rt early next year.  $\Lambda$  committee of the Governors has been formed. and to this certain artists and connoisseurs have been co-opted. The scheme for the exhibition includes three divisions:-(1) Civil articles of domestic use; the decoration of the house and personal adornment; (2) militaryarms and accontrements; flags and banners; heraldry; and (3) ecclesiastical. The committee desire that as far as possible the exhibition be confined to British productions, and ask owners of interesting examples to forward particulars of such to Mr. John M. Ground water, the secretary, School of Art, 167, Ren frew Street, Glasgow.

The Brown Book of the Architectural Asse ciation of Ireland contains a portrait of the president, Mr. II. G. Leask, who delivered his opening address at the meeting of the association, held at 15, South Frederick Lane, Dublin, on the 4th inst. From the accompanying biographical note in the Brown Book we learn that the new president is three-and-thirty this month. He served his apprenticeship to his father, Mr. R. H. Leask, He served his M.I.C.E.I., after which a practical experience in Kearl's, a firm of Dublin iron founders, and a short period in the Waterford drawing office was followed by two years with a past-president of the association, Mr. G. P. Sheridan, A.R.I.B.A. Mr. Leask then joined his father in partnership, but afterwards obtained a position on permanent staff of the Office of Public Works, first as assistant surveyor and latterly as chief draughtsman. He was hon, secretary of the A.A.I. in 1905-6 and 1909-10, and their president in 1911-12. Mr. Leask is an expert photographer as well as a facile draughtsman.

The Streets and Buildings Committee of the Corporation of York have received a letter from Messrs. De Burgh Bros., enclosing plans of a five-roomed cottage proposed to be built in Carrington Avenue, Poppleton Road, which complied with the building by-laws except as to height of window lights in bedrooms which, in this case, they asked should be allowed to be 6 ft. 6 ins., as against 7 ft. 6 in. required by the by-laws. They stated that if the concession were granted, their client proposed to build fifty cottages in the street. The committee decided that application be made to the Local Government Board for an amended by-law whereby the minimum height required for at least one of the windows in a habitable room shall be 6 ft. 6 in., instead of 7 ft, 6 in., as at present, where the width of the street from building line to building line is not less than 50 ft.

At the installation meeting of the "Canter bury 'Lodge of Freemasons, No. 1635, held at the Monico Restaurant on November 9, Mr. F. J. Lennox Robertson, who is well known Claridge's Asphalte Co., Limited, was inducted in the master's chair by Mr. George Frederick Ridley, the outgoing master. He ifterwards invested his officers as follows afterwards invested in someers as ionicers. The Rev. Arthur George Lennox Roberts in. P. ward Hall and Edward William Mitchell. Stewards: and J. H. McNaughton, Tyler Amongst those present to witness the cere mony were Messrs, F. E. Bristowe, Grand Junior Deacon of England, F. W. Rogers, Chas, E. B. Kibblewhite, and L. E. Ellison. the last-mentioned being amongst the latest recruits to the British Army. A penticularly pleasing teature of the evening was the fact that in the Senior Warden and the Junior Deacon of the Lodge the Master was invest ing his father and brother respectively

The Covernment of India have decided to establish a permanent commercial museum in India. The museum will be located in Calcutta, and will be attached to and form part of the Department of Commercial Intelligence. The development of the museum must neces sarily be gradual. It is intended that the museum should contain samples of the principle. cipal manufactures imported into India tron all foreign countries with which there is existing or prospective Indian competition, and also representative samples of the corre sponding Indian manufactures. It will also contain samples of goods marketed in foreign countries which India might be in a position to supply. The samples exhibited will be supplemented by catalogues and price lists. which will be kept continuously up to date by printed statistics wherever possible

"Valves and Valve Gears, Vol. 11." by Prof. Franklin De Ronde Firman, M.E. (London: Chapman and Hall, Ltd., 3s. 6d., deals with gasoline, gas, and oil engines on similar lines to those of Vol. 1., in which steam-engines and steam turbines were treated.

"Mathematics for Machinists," by R. W. Burnham, M.A. (London: Chapman and Hall. Ltd., 3s.), is a simple and practical Beginning with fractions, it gives in elementary form an explanation of the calculations most frequently occurring in the machine shop, discouraging as far as no sible the pracice of using a formula mechanically, with no thought for its meaning. It will be of service to the majority of mechanics who have for-gotten most of what they learned of mat's matics at school or in a technical class

A new church is to be built at Wallasey from olans by Messrs, Langford and McGovern, of North John Street, Liverpool,

The new municipal buildings at Maester have been formally opened. Mr W Gaylard, of Bridgend, was the contractor. The cost was £4,350.

A hall is about to be built in connection with the purish church of Scoue, near Porth as a memorial to the late Captain Machaff, of the 1st Camerons, Mr. Mackenzie, of Inverness, is preparing the plans.

The estimate of Messrs, W. F. Spencer The estimate of Messrs, W. F. Spencer, Cress Bank Works, Oldham, amounting to \$42° has been accepted for the heating and hot wave-supply in the new offices of the Bayer Ce Ltd., now being erected from the plan and under the sinervision of Messrs, Maxwell and Take, architects, 25, Brazennose Street, Man-chester

Bedford County Conacil have unanimously romoted the deputy county surveyor. ? X. Smart, to succeed the late Mr. W. H. as country surveyor. Mr Smart will receive a commencing salary of £400, rising by annual increments of £20 to £500 a year, with an allowance of £150 in respect of traveling experience within a penses within the county

At the meeting on Friday of the Metr poli-tan Water Board it was reported that the arbitrator's award in the proceedings between with Board and the Corporation of Hertford with reference to the Hertford sewage works amounted to £25,000. Incidentally, it provides for the conveyance by the Board of twelve acres for the conveyance by the Board of twelve acres of land at a price of £4,300. It was or anged by the Board to defer payment until six near the after peace is declared. Meanwhile, 2 preent, interest will be paid. On the recent mendation of Mr. II. Austen H. 'I, the acchinect for the new head offices in Resolution Avenue, it was acreed to expend an estimated additional sum of £850 in continuation of the filter heal retaining wall adjoining the sale of the offices, so as to allow access to be obtained

---Mr. Lloyd George as Minister of Munitions has appointed Mr. Henry Holloway, the managing director of the well-known building lirm of Messis, Holloway Brothers, to be Director of Honsing Construction, with special reference to the provision of temporary accommodation for munition workers. It is amounted that Mr. Holloway has placed his services at the disposal of the Ministry in a voluntary capacity.

Mr. John Henrier, J.P. E.S.L. for any contraction of the management of the services at the disposal of the Ministry in a voluntary capacity.

Mr. John Hepper, J.P., F.S.I., for sixty-one vears the principal of the firm of Hepper and Sons, auctioneers, of East Parade, Leeds, died from pheamonia on Sanday at his residence, Millbrook, Ilkley, in his eighty-first year. The business was founded by his father in 1830, and is being carried on by his son.

T. H. Hepper.

Messis, Willeox and Raikes, of Birmingham, Messis, Willow and Raikes, of Briningham, have been instructed by the Urban District Council of Bishop Anckland to prepare plans and estimates for the intercepting sewer from Raby Cross to Wear Chare with a view to obtaining sanction to proceed with that portion of the scheme between Raby Cross and Cradock Street. Application will be made to the Local Government Board to sanction a learn of \$10.000. loan of £10,000.

loan of £10,000.

In an address given before the Delphian Coterie at the Cannon Street Hotel on Monday right, Mr. E. G. Culpin dion, secretary, Begram Town Planning Committeer said that the reconstruction of Belgiam after the war must be carried out by Belgiams for Belgians. The Begian Minister of Agriculture and Pahas Works had approved the suggestion for it town should be built or reconstructed so ely by international funds, to stand as a memorial to the respect of the nations for the part play I by Belgiam in the war.

The death occurred at Aslaver, Derbyshire

The death occurred at Aslover, Derhysime at Monday, at the advanced age of 95, of Mr. John Surrees, at one time a well-known lardscape artist. For over twenty years Mr. 8 aboves had been blind, but prior to that he could do the Road Academy and elsewich and held exhibitions of his own at Cartes. Mr. Surrees' work is well represented in natively county collection, his associates and held exhibitions of his own at Cartes. Mr. Surrees' work is well represented in natively county collection, his associates at 2 with Newtonian and Edward Road and Edward Mr. Surrees' where the county of Mr. Surrees' with the county of Mr. Surrees' with the county of Mr. Surrees' with the county of Mr. Surrees' as a few of £2.7% of the whigh the county of £2.7% of the whigh the county of £2.7% of the whigh the county of £2.7% of the whigh the county of £2.7% of the whigh the county of £2.7% of the whigh the county of £2.7% of the whigh the county of £2.7% of the county of £2.7% of the county of £2.7% of the county of £2.7% of the county of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7% of £2.7%

Modern building operations constantly involve a concentration of heavy loads at points, especially in steel-framed construction; and inasmuch as it can be shown that the stability of such resides, primarily, in the security of its foundations, every care is needed to secure unyielding support for stanchions. In such a steel-framed building as is indicated in Fig. 1 any failure at any one point necessarily entails the setting up of injurious stresses in the whole framing; for secondary only to sure foundation, in steel building, is the matter of tie-joint connections-throughout the construction. If every post and beam is securely riveted and bolted, the whole work becomes homogeneons. Under these circumstances it is not possible to lower the level of any given point in any one vertical member without throwing abnormal stress upon the jointing. These considerations do not

apply to ordinary mixed building con struction, the stability of which depends largely on strong brick walls and cross walls. Settlements will cause unsightly cracks; but where such are slight they do not indicate serious danger, which, as a rule, only subvenes in cases of really untrustworthy foundations. Moreover, since the strength of steel framing, given secure foundations, is a matter of wellmade connections, it results that economy of material succeeds upon good design and workmanship, for where this condition is observed lighter sections of steel can be employed and the total weight of the construction reduced. We cannot do this unless the points of support are rigid. and unyielding.

It is important, therefore, to secure the stanchion base, in the sense that it may remain immovable in its designed position. In steel construction all the weight is concentrated and brought down to

FOUNDATIONS FOR CONCENTRATED this is so in spite of heavy walling, which LOADS. this is merely screen-work. True steel framing is a structure complete in itself, and although stanchions well enclosed in strong brick walls receive undoubtedly a measure of support from such walls, all such extraneous support is discounted in calculations. Our ordinary method of building with a self-contained, self-sup porting steel skeleton is certainly not noteworthy for economy, where brickwork and masonry of quite sufficient strength to support all the free ends of girders and joists is arranged. Such construction has superfluous strength; but where we require the benefits of fireproof building, together with massive, ornate. and deeply-cut architecture, we have no recourse under present by-laws than to make practically a dual construction.

It follows that every fireproof floor, in construction such as Fig. 1, represents a surface that should by a perfect plane, normal in every direction to stanchion axis. The accuracy and constancy of such plane depends on unvarying conditions in the substructure. This we have shown to be a matter attendant upon foundation and tie, first upon the one, secondly upon the other. It is well recognised that that construction which is accurately aligned and riveted and securely holted can be put up at less cost than one of apparently greater strength, having deeper girders and heavier structions. In an extensive building, of a great number of stories, the amount of steel that can be saved by intelligent design and the best connections is considerable. Thus security and economy attend upon sure foundation, for it is this, and this alone, that enables the lighter section of steel to be employed in post and beam.

In the earlier days of steel joistingthe cast-iron column era-we depended upon solid concrete, brick base, and stone template, much as shown in Fig 2; but the increase in loads, the finer concentration of weight on points, and tall build ings with floors and superimposed loads bearing only here and there, has caused this type of foundation to be, to a great extent, discarded, and introduced a kind of reinforced concrete foundation, in substance if not in design. It is plainly an advantage, and in many soils a vital neces sity, not to carry foundations too low. We cannot, economically, greatly broaden concrete bases; that is to say, the method of spreading out for distributed load over a wider area is not consistent with the type of construction. The use of steel, in the form of H section, permits a great load to be spread over an area sufficiently large to come within the safe margin for

London district is not large. If we have to arrange to distribute 250 tons on soil bearing only 1 ton per foot, according to the views of authorities and enforced by law, we need an area of 250 super, fect. If we decide to make the foundation of simple concrete, we cannot put down a mass of 15 ft. by 15 ft. only a yard deep, but we can do something similar by embut we can do something similar by employing the grillage system. This is the true apology for grill-type foundation. Let us take Fig. 2, and assume 300 tons upon the column base. To design a snitable depth of concrete is a more or less ephemeral, rule-of-thumb, practised-eye-satisfying matter. Take what data we may, the point is one demanding experience and judgment, as it has ever been with architects and engineers in dealing with foundation problems. But we have to take account of certain conditions and

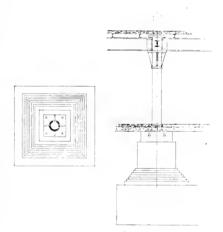

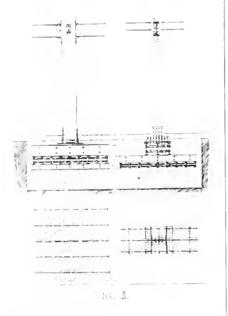

FIG. 2.

circumstances. First, the less the depth the less the cost, and the less the brickwork base of such a foundation mass, as indicated in Fig. 2. It may be that we could just comfortably arrange for legal loading of foundations by putting a broad footing immediately beneath the basement floor indicated. As drawn, we run down to a better bottom, assumed, but this not being always the result of deeper digging, indeed often leading from bad to worse, we may gain by maintaining a higher foundation level, both economy and safety, and be within the by-low at the same time. We might assume 3 tons per foot super, as a possible safe load for the level of foundation as drawn, requiring 100 super, feet of concrete and ten feet square for the mass shown. Assuming so much, let us further suppose that at the level of the top of the is concentrated and brought down to soils. It must be remembered that the brick base the soil will bear one ton: we foundation by isolated stanchions, and maximum loads on soil permitted in the require 300 super, feet, or, say, 18 it.

are time cantilevers. Where the foundation is spread out and relatively shallow in depth, the practice seems more reasonable. The data required for the design of gir lage foundation are the weight on stanchion, the area of base-plate, and the I of bearing power of soil. At least two rows of R > J 's are required to properly carry out the principles of design, be cause, plainly, to have only one row limits the over-all area of such joisting to on one direction, that of the width of the stanchion base-plate. A grillage foundation should, then, consist of at least two tiers of steel joists. Examining, generally, these conditions, we can see that the uppermest tier requires to be fairly deep, because the stanchion load, bearing directly in the centre, the number of steel joists is limited by the practical necessity of baying sufficient space between them for the engly samming the concretehence it is not generally possible to get more than three or four joists on the uppermost tier, excepting in the case of very tall buildings with very wide and heavy base-plates. The beneficial result of multiplying the tiers of joists can be easily understood. In one style of design the appearant tier of joists is shortened leading to a more generally pyramidal mass of steel. The load is, as it were. stepped off or taken up in grades, and the weight more gradually brought down upon the final substratum of concrete, which forms the connection between artificial and natural foundation.

# SOME CONCLUSIONS ON HOUSING OUR WORKERS!

#### B. W. E. RILEY, FRIBA, MICE. B.B.A

My first duty in addressing you this even ing is to acknowledge my appreciation of the privilege of participating in the work of the Chadwick Trust in London. For this distinction the sixteen years which I have devoted with the London County Council to housing and town planning problems, and the designing of accommodation for nearly 51,000 persons of the working-class workers, is probubly responsible. I hope to give some conclusions which have resulted from this ex-perience and which may be of benefit to my

It will be necessary to indicate shortly the principles which govern such operations in argo towns. First, there are statutory obligations on local authorities to re-house when st and the larger foundation, any area is condemned as inhealthy or whom so with 1.2.7 the excavation is any area is condemned as inhealthy or whom any area is condemned as inhealthy or whom each place of the procedure of reagultude involving displacements as curried out. In the second place, there is the larger phase of the questions are consistent as which I is been classified as more or less to the placements.

costerm augers, porcers, waterside labourers, lightermen, etc., who are forced by the nature of their occupation to live in the immediate proximity of their employment, but statistics show that the percentage ranges only from 21 to 40.

#### NOTHING TO LEARN FROM GERMANY.

The war has, however, produced a new set of circumstances. To meet the national emergency, it became necessary immediately to augment the staffs of some works and to create others. From their nature these must be situate in more or less sparsely populated he strate in more or less sparsely populated districts, and the question of housing thousands of workers, for whom it is a vital necessity that they should live close to their employment, is of paramount importance. This could be accomplished by the erection either of blocks of dwellings or of cottages, and it is satisfactory to find that the German method of building huge, airless, sunless blocks of tenement dwellings has not been followed by the Government. Town-planners in this country have for some time bidden us lift our eyes to Germany as the source of knowledge, but it may be confidently asserted that in the planning of homes for the worker this country has nothing to learn from the Tenton. As showing the effect of the blockdwelling system in Germany, where it is most rue, interesting figures have been recently published by a well-known authority on housing, Mr. T. C. Horsfall. In London the average number of inhabitants per house is about eight, and in Manchester a little over five. In Berlin the average number per house was, in 1740, seventeen; in 1840, forty-three; and now seventy-seven. There are houses which contain 250 families each. Berlin has 32.000 inhabitants to the square kilometre, while London has only 15.000. In German towns, including Berlin, the price of land is eight or ten times as high as that of land in corresponding positions in English towns, and as a consequence, in 1900, 45 per cent, of all Berlin households occupied dwellings of only one room, and 70 per cent, of the honseholds had dwellings of not more than two rooms, yet rent absorbed one-fifth to one-fourth of the income of working people. In 197,394 dwellings, each of which had only one room and a kitchen, there were 726,725 inhabitants, and in addition 42,599 lodgers. In 1910, 45 per cent, of all Berlin dwellings were back dwel-The result of this overcrowding and of the darkness and bad ventilation of dwellings is that in Berlin the percentage of deaths from tuberculosis is half as great again as in London, and London has about 30 per cent. less deaths of persons of from 15 to 25 years of age than has Berlin. The effect of crowded dwellings on sexual morality is necessarily extremely bad.

#### BOURNVILLE AND PORT SUNLIGHT.

Near provincial centres in England important efforts were made between fifteen and twenty years ago to give a large-hearted trend to this great social question of housing the workers. Port Sunlight, near Liverpool, and Bourneville, near Birmingham, are notable instances. The removal of large manufacturing concerns from busy and highly expensive centres much required for retail distribution was, I submit a root cause of these and other similar establishments: the problem of housing those required to do the manual labour in the works needed a solution on which the practicability of the main idea depended.

Taking Bournville first, Mr. Cadbury had moved his great cocoa works from Birming ham, and wanted a nucleus of labour at Dournville. He obtained the best of advice and laid out 570 acres adjoining the factory in a renerous way, and in a similar spirit built houses rented at 4s. 6d. and 5s. 6d. per week. The idea was to provide each cottage with about 600 square yards of land, supple The idea was to provide each cottage mented by all timents, and to give a staff of guideners to advise and encourage profitable gardeners to advise and encourage profitable cultivation. The planning of the houses aimed at a practical solution of the workman wants, and a hying room of over 250 tt. supe was the central feature. The outlay in the early stages amounted to £171,000. The freedom allowed under the original scheme. by which tenants could purchase their house

on easy terms led to abuses, and as artisans not employed at the Cadbury works were eligible as tenants, Mr. Cadbury founded a trust to take the concern over and use the income for further development, making the enterprise a question of supply and demand. The trust was enjoined to suppress all political and sectarian bias, and to allow intoxicants to be sold only where their suppression might create greater evils. When I was there the efforts were concentrated on getting some thing cheap and good enough to fulfil the terms of the trust, and the remarkable variety in the appearance of the early buildings was endangered, as the drift was then towards a rather dull exterior. The scheme at Cress-well mining village, Thornton Hough, and that at Port Sunlight were founded on the same idea of housing the worker in more cheerful and elevating conditions where the work in a central factory provided a fairly secure employment. The 140 acres of land, which were exclusive of the Sunlight soap factory, were purchased at about £240 an acre, and laid out with great skill. No road is less than 40 ft. wide, the main avenues have a width of 60 ft., and the natural formation is utilised in an artistic and effective manner. There were 25 acres which were overflowed each tide. These areas were dammed off, two bridges constructed to carry through important roads and avenues, and an excellent town-planning scheme designed and carried through. recreative needs as well as the housing accommodation proceeded simultaneously. Schools, church, village halls, inn. dininghalls, institutes, and gymnasium, swimming bath, open air theatre, etc., were put in hand as the want was felt. When I visited the area, there were about 570 houses built and in occupation, and the cost had then reached the gigantic sum of £370,000. It is wonderful evidence of broad-minded spirit that Messrs. Lever Brothers have never received or ever expected any direct return whatever from the sinking of this huge capital. The tenants were paying as rent the rates and taxes and the bare cost of maintenance of the houses. With triffing exceptions there are only two types of cottages:
(a) what would be classified in London as a 4-room cottage, and (b) a 6-room (or locally called, parlour) house. Class (a) has a living room on an average about 15 ft. by 14 ft in., and a scullery and bath on the ground floor, and 3 bedrooms on the first floor, the smallest being generally without a fire-place and between 60 and 70 sq. ft. in area. The (b) class has on the ground floor a par lour ranging from 13 ft. 6 in. square lour in, square by 14 ft. 6 in , a kitchen about to 18 ft. 13 ft. square, and a spacious scullery and bath. On the first floor are four bedrooms Class (a) were costing in 1902 I. and class (b) £550. It will of good size £330 to build, and class (b) £550. be seen that none but merchant princes could earry through great and generous enterprises such as these.

### WELL HALL.

Turning from private to public enterprise, the most recent large scheme is that of the Government at Well Hall. Approximately, the areas covered and to be built upon are 70 acres on the east and 30 on the west of Well Hall Road. The tramway to Woolwich bisects them, the southern corner being 300 yards from Well Hall station, which should be a valuable asset when the houses are no longer required for the Arsenal workers The areas are laid out with streets of 40 ft. and 30 ft. between the forecourt fences. The latter width is in contravention of the pro-visions of the Building Act, which prescribes a minimum width of 40 ft. It is curious that this somewhat retrograde step should have heer taken by a Government Department, thus traversing an Act of Parliament which has regulated every new building scheme within the county for the past twenty years The immense outlay which the ratepayers of London have met to improve the width of streets for the requirements of increased traffic and to open up closely-built areas would, it is thought, have given pause to such scheme, and the number of houses to the acre (approximately twelve) did not compel the resort to such a policy. It should be noted

that the plea of Defence of the Realm obviates any challenge, but the provision of legalised space about buildings ought not to have been aside by the creation of narrow streets hout convincing reasons. There are on the without convincing reasons. without convincing reasons.

Ance are on the cast side sixty-five houses of the first class, 249 of the second class, 411 of the third class, and 212 of the fourth clase; the latter are flats of the maisonette type. The first class living-room, paraccommodation consists of lour, spare bedroom or duning-room, with scullery on the ground floor, and three bed rooms on the first floor, with the usual offices, and bathroom with hot and cold water. Class II. houses contain living-room, parlour, scullery, three bedrooms, and the usual offices, with bathroom. Class III, houses contain living-room, scullery, three bedrooms, and the usual offices, with bath. Class IV, are flats arranged in two-story houses, each flat consist ing of living-room, scullery, two bedrooms and the usual offices, with bath. The eleva tions are treated with skill, and great variety has resulted. The frontages are generous, as also is the provision for gardens. The construction and the materials employed are of the first class, but here again it is to be regretted that Parliamentary enactments on the employment of building materials should not have been observed. The adoption of weather boarding in instances where it has been used as an external covering to a building will, I submit, be conceded as obsolcte. When timber of every kind was at a high price, it seems to require much weighty reason to have so employed this material, especially having regard to the heavy bill for maintenance which will be involved in the future. As a lesson to those who have to comply with trict financial equilibrium in all voluntary housing schemes, it is to be regretted that the financial phase of the problem cannot be made known and compared with the operations of other authorities, trusts, and companies.

#### COTTAGE HOUSING BEST.

Hitherto it has been contended that, except in the case of a minority before mentioned, the most rational method of housing where travelling facilities are available was to provide cottage accommodation. This to provide cottage accommodation. This should be far enough from the business centre to ensure that by reason of cheapness of site it would be possible without incurring financiai loss to afford a reasonable amount of open space and sufficiency of accommodation, with he privacy which is probably the greatest asset in a home. With adequate transit to convey the worker cheaply and quickly to his employment, there can be little doubt of the superiority of the cottage over the block dwelling. Fresh air, change of scene, and easy access to the country must brighten the lives of the occupants of the cottages, and the removal of many sordid influences in-separable from town life cannot fail to produce a good effect not only on the health, on the efficiency of the worker. The condi-tions under which accommodation has been recently required by the State are so exceptional as scarcely to constitute a fair test. The urgency of the need allows little time, and the state of the market for labour and materials almost eliminates consideration of cost. It is inevitable that cottages built in such circumstances should cost more, but one result of these conditions is that any doubt as to the relation of rent to capital cost might he disregarded. Such schemes in themselves are unconcerned with the problem which has troubled housing reformers for many years viz.. whether it is financially possible to house the worker on a rent which he can afford to pay, having regard to his income, and whether the State should subsidise those cases where. owing to lowness of wages, adequate accommodation cannot be provided on a sound financial basis. Where the Government provide the site and buildings and the worker also earns a wage considerably in excess of what he receives in peace time, these questions do not arise; but the reflection cannot be ignored as to what is to happen to such estates after the war, in the event of large numbers of men being no longer required for such work. The State may not need the estates, and it is to be doubted whether any purchaser at anything like the original price could make a sound investment of them. THE BOUNDARY STREET SCHEME.

Economic considerations must be dominant in all normal bousing operations. whether private or municipal, and the essence of the question is, how to build work ing class habitations which will pay their way, at a rent within the means of the occupant. My own experience is that the crux of the problem is the cost of the site, and thus the difficulty is most acute with housing in central districts. Cleared sites in such localities are seldom obtainable, and where sites have to be cleared to enable the population to be rehoused, the value of the has had to be considerably written down m estimating the financial result of such schemes. Previously to the passing of the Housing Act in 1890, the late Metropolitan Board of Works sold land carrying a housing obligation to companies or trusts, all of which received a subsidy in the form of a " writing down' to "housing" v from the commercial value value at which it was charged to purchasers. In the case of 30 such sites, the commercial value of which estimated at £727,535, no less than £397,613. or nearly 55 per cent., was written off. Part I, of the Housing Act placed on local authorities the duty of preparing and carry ing into effect schemes for the rearrangement and reconstruction of the streets and houses within unhealthy areas. The clearance of the notorious Boundary Street area, about 15 acres in extent, was the first scheme undertaken by the London County Council under these powers, and in this case the commercial value of the land was written down from £131.670 to £62,010. With a population of about 5,700, the death rate was over 40 per thousand in 1889, or nearly double that the whole of Bethnal Green. The widest street was barely 28 ft. wide: no house possessed a front door; no repairs were e carried out, and the neighbourhood was described as tenanted by heathens. Under the scheme formulated by the Council. area is now approached by an avenue 60 ft. wide, leading to a central open space with a band stand. Tree-planted streets, 50 ft, wide, radiate from this centre to the limits of the area, and these are connected with the streets bounding the area by branch streets 40 ft. wide. Five thousand five hundred and eighty-four persons were rehoused in 1,069 tenements, 23 blocks of tenement dwellings being erected, and a smaller number of cottage dwellings half a mile away.

The gross rental of the estate for the year ended March 31, 1915, was £23,486, and the accounts show that after paying all maintenance and debt charges, sinking fund, etc., there is a surplus balance on the year of £1,405. The buildings are well occupied, the emptics for the same period amounting to only £274, or 1.17 per cent, of the gross rental. The cost of the scheme and buildings was £337,535.

#### THE TABARD STREET SCHEME

The largest area of clearance ever undertaken under the Housing Act is that which is now proceeding at the Tabard Street, Grotto Place, and Crosby Row areas, Southwark and Bermondsey. The total extent is 17 acres, and the number of persons of the working class to be displaced is 4.552. It will be noticed that the number of persons is smaller than in the Boundary Street area, but the insanitary condition of most of the property rendered it impossible to effect any real improvement by dealing with in hyidial properties. The death-rate from 19048 was properties. The death-rate from 19048 was 36.8 per thousand, or more than twice that of Southwark (18.2), which again exceeded that for the whole of London—viz., 14.9. The number of vacant houses and tenements within a radius of one mile enabled provision to be made for supplying an urgent need for additional open space in the neighbourhood. eonfirmed by the Local confirmed by the Local March, 1912, accom-By the scheme Government Board in March. modation is arranged on the area for only 2,580 persons, and the central portion, about five acres in extent, will be laid out as an open space. Rehousing accommodation will be provided in five-story balcony block dwel-lings, overlooking the open space, and twenty-five cottages will be erected on a detached

#### SELE CONTAINED DWELLINGS THE MOST Distribute.

It is not, however, on account of financial a salegations, alone, that every endeavour s' ald be made to draw the industrial popur lation from crowded centres to the spacious advant Prent or when centres to the spacinas and I cal'ther suburbs. A recent Departmental Committee has said that public option now recognises and demands that every working class family should be proside I with a self-contained dwelling of suffic.e.t size to prevent overcrowding, and which admits of the separation of the sexes. Vself-contained dwelling is defined as one which provides living accommodation with scullery and water closet accommodation for the sole and water closet accommodation for the site use of each family. Some of the difficulties which beset the provision of such accommoda-tion to central districts have been indicated. It addition, there is the growing importance which is given to abundance of light and air, and there are signs that demands will be made for more hydienic construction in our building. The effect of the sun's rays in distroying injerches is admitted, and it is c'a med that buildings should be so designed that the direct rays of the sun should pene-trate through every part of all living rooms. I am strongly of minion that an effort should ic made in every case in which block dwellings are erected to dispose the blocks on the site in such a way that the maximum of sunlight would reach the haldtable rooms This might operate disadvantageously on the a ommodation, but considering the limited such by operticularly in winter in this coun essential that as much as possible should find its way into the living rooms

#### French Unities of English " Model DWELLINGS.

At the Housing and City Development Congress held in Ghent in 1915, a French housing expert showed plans of dwellings which are described as model in various parts of England, and produced statistics to show that they are planned against many ele-mentary principles in hygiene. The criticisus were levelled at the practice of enclos ing common staircases and the exclusion of the very limited sunlight which this latitude affends in the darker portions of the year, but principally in connection with the want of cross ventilation in the tenements. There will much reason in these criticisms, as there are numerous dwellings in London where it is a possible to ge inrough ventilation between from and back rooms, the cross wall in many cases obstructing the passage of air. This matter is referred to in the London County Council's housing handbook in 1915, where it Estate Holo Is stated that, although the rection of Asy in Town Planning Act declares the erection of is stated that, although the Housing and look to back houses to be unlawful, it does not probably the erection or use of a tenement onse in which the tenements are placed back touse it which the tenements are placed back to back, if the medical officer for the district certifies that the tenements are so constructed and arranged as to se are effective ventilation of all habitable rooms in every tenement. The Housing Acts give no definition of back-to tack houses, but a reasonable definition would thear to be a house or letting having one one if side only, with ventilation open to the external air. It states that the Council 1991 I di before it plans of a group of is 1941 for before it plans of a group of a stable lines proposed to be erected by the tracter of a philaminopic fund. On the bases of a philaminopic fund. On the bases of the above definition a large number of the ten ments were back to back, and in any case the Correll felt that the general profision of through ventilation to the intermediate tenements was unsatisfactory. The mediate tenement in the district issued the ceruit that the extraction is the Act and the Conneil to the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the as regards, which the particular officer for the district issued the certification in the particular officer for the particular officer for the particular officer for the particular officer for the particular officer for the control of the certification of the particular officer for the control of the certification of the particular officer for the certification of the particular of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of the certification of t

sides back to front of the block, to afford efficient ventilation. Where balconies are employed they should in no case overshadow habitable rooms. I am bound to admit that in London there is always oppo-sition to leaving the staircases open, but I am convinced that it is a correct and hygrenic method of dealing with the ventila tion of these buildings.

### THE L.C.C. COTTAGE HOMES.

Financial and hygienic difficulties such as have been indicated do not arise in the construction of cottage homes, so many of which are being developed on the outskirts of our large towns. It may be interesting to com-pute the cost of a cottage at the County Counerl's White Hart Lane Estate, Tottenham, containing living-room, bedroom, scullery, and offices, with the same accommodation in block dwellings at the Bourne Estate, Holborn. White Hart Lane the cost of land was £11 16s, roads and sewers £24 4s., and buildings £180, or a total of £216. At the Bourne Estate, the cost of land was £337 and the buildings £286 10s., or a total of £673 10s It will thus be seen that a family could be housed at White Hart Lane for considerably ess than the cost of land alone at the Bourne Estate. The nunicipal development of cottage estates on the outskirts of London has been carried out under Part III, of the Housing Act, which has been regarded as voluntary The land charge is taken into account at purchase price, and the scheme must show financial equilibrium after bearing all capital charnes.

Time will not permit a lengthy description, but it may be of interest to refer briefly to the development of these estates. The cottages are two-story buildings arranged in they are almost invariably set back 5 to 15 ft, from the forecourt fence. The schemes for development have been largely influenced by the following considerations-

(I) Economy of land area and road con

struction in proportion to building.

2) The avoidance, as far as practicable, of deep external back projections in close juxtaposition, which tend to cause insanitary pockets and prevent the freer circulation of air currents along the backs of terraces of houses. The wholesale erection of insanitary projections in close proximity to each other in many suburban estates is a reproach to the law which permits it.

#### TOTTERDOWN FIELDS ESTATE, TOOTING.

The first large scheme undertaken in London was the development of the Totterdown Fields Estate, Tooting, about six miles from Charing Cross and about three-quarters of a mile within the county boundary, on the main tramway route between Tooting and the central area. The estate, which is about 38 acres in extent, was purchased in 1900 for £44 238, the price being £1.150 per acre, a comparatively high figure for land for working-class cottages. The development of estate has been completed, and in all 1,229 cottages and four shops have been built, with accommodation for 8,768 persons. The principal streets are 45 ft. wide, lined with plane trees, the other streets being 40 ft, wide.

#### THE NORBURY ESTATE.

The purchase of estates outside the county boundary is permissible under the Housing Acts, and the first to be acquired was Norbury Estate, situate about two miles from Croydon and about seven miles from Charing About 17 acres have been developed, Cross. providing accommodation for 3,638 persons in 498 cottages, and the scheme approved for development of the remaining II acres of the estate provides for the accommodation of 1.869 persons in 264 cottages and two shops. The strain of finance during the war has so fur prevented the completion of the last sec tion of this estate.

#### WHITE HART LANE ESTATE.

The largest estate purchased for housing purposes by the Council is situate in Totten han, Wood Green, and Edmonton. It is five miles north of the county boundary, about six and a half miles from Charing Cross, one mile from Wood Green station, and half a mile from Bruce Grove station. The estate

consists of two sections quarter of a mile apart. the northern section containing 49 acres and the southern 177 acres. The purchase price The purchase price for the property was £90,225, or at the rate of £400 per acre, the owner requiring that both sections should be taken. As the northern section would be difficult to develop for building purposes, the Local Government Board in 1911 consented to it being sold, but it has not yet been disposed of. Development of the estate has up to the present been con fined to a wide strip of the southern portion where roads and sewers have been constructed sufficient to enable about 48 acres to be covered, and on about 40 acres (including  $3_3^4$  acres laid out as a public garden), 963 cottages have been erected, providing accommodation for 7.524 persons. The Local Government Board has consented to the provision of fourteen shops on the estate, and five have been erected on the Lordship Lane frontage. Administrative buildings have also been erected. The roads have been so planned that the majority of the blocks of cottages run north and south, and each frontage of the buildings therefore receives direct sun light. At the junction of Awlfield and Risley Avenues the cottages have been arranged in angle blocks, with open spaces in front, and in other cases the arrangement is in shallow quadrangles, with open spaces bordering on the road. The estate garden is turfed for tennis and bowls and surrounded by raised terraces and flower gardens.

#### OLD OAK ESTATE, HAMMERSMITH.

The estate at Old Oak Common Lane, Hammersmith, is the most recent, and being per haps on that account more interesting, may merit a more detailed description. situate about five miles from Charing Cross, and is bounded on the north by Wormwood Scrubs, an open space of about 215 acres. As the ground rises towards the west, extensive views can be obtained. The estate origin ally contained about 54½ acres, the purchase price being £29.858 (about £550 per acre), but the Great Western Railway Company subsequently obtained running powers for a new railway to cross the estate diagonally, and ac for a new quired nearly eight acres for this purpose, paying the Council £10,500 in respect of the land and the damage sustained by the estate. Development of the section west of the rail-way is now completed, except for a site tem-porarily occupied by a school. This section is about fourteen acres in extent. Five shops and 319 cottages and cottage flats have been provided, accommodating 2.231 persons. Of the cottages, 65 contain five rooms, scullery and bath, let at 11s, 6d, to 13s, per week; 105 have four rooms, scullery and bath, let at 19s. to 11s. per week: 106 have three rooms and scullery, at 6s. 6d. to 9s. 6d. per week: 27 are two-room flats, let at 4s. 6d. and 5s. a week; and 16 are one-room flats, let at 4s. a week. The Old Oak estate may be regarded as embodying the most recent developments in cottage housing in London, and in framing the scheme the policy adopted was to endeavour to meet the demands for smaller cottages. which can be let at rents within the reach of those earning 25s, to 30s, a week. It was thought that only a small number of the larger type of cottage, for which a rent of Hs. 6d. to 13s, a week is charged, should be erected, and that about one-third of the total number should be three-roomed cottages, to be let at The rents are inclusive of rates, taxes, and water supply. The needs of smaller families water supply. The needs of smaller families of the poorer classes requiring only one or two rooms were also considered, and as an experiment a limited number of tenements of one, two, and three rooms, at low rents, are The smallest type of one-room cottage flat, with a separate scullery and water closet, is let at a rent of 4s. a week. It is not thought that these one-room tenements are adapted to the requirements of married couples with young children, and therefore their occupation is restricted to old married couples or to two persons of the same sex. One person living alone or an adult with one young child are, of course, eligible as tenants. The scheme for the section east of the railway provides for the erection of 721 cottages and two shops the local authority have failed to exercise (one designed for a baker and to be fitted with a modern hakehouse). This section will accommodate 5,330 persons. A school will be authority have so failed, the Board must take the rebuilding as two-storied cottages of

reserved for the erection of a church by the Ecclesiastical Commissioners. It may be stated that up to now the development of this estate has met with the greatest success, a list having to be kept of prospective tenants want ing for the erection of the cottages. Some of the cottag's have been allocated as the subject of an experiment for enabling the tenants to purchase leases of their houses.

The following table shows the result of the

provided on the estate, and a site has been into consideration the necessity for further accommodation for the housing of the working classes in the district, the probability that the required accommodation will not be otherwise provided, any other circumstances of the case, and whether, having regard to the liability which will be incurred, it is prudent for the authority to undertake the provision of such accommodation. If, after holding a public inquiry, the board are satisfied of failure on the part of the local authority, the board may working of these estates for the year ended make an order directing the authority to carry March 31, 1915:out works to remedy the default. That these

\* Including char, es for reads and sewage. It cluding new cettages h n'ed over on completion.

#### MAXIMUM WIDTH FOR ALL STREETS.

In the development of these estates every endeavour has been made to combine conmer cial and architectural success, and variety in planning and in treatment of the tions has been consistently aimed at. I should wish to take this opportunity of emphasising one point in particular-that in no case has any street on the County Council's estate been constructed of less than the minimum width required by the local building act or by-laws, and in many cases the width has been voluntarily made considerably greater. One hears it persistently argued that by-laws are too arbitrary and extravagant, and that in streets which are not intended for heavy traffic, the minimum width required by the by-laws might be reduced. I am not of that opinion, as I! consider that narrow streets become alleys where the free circulation of air is, to say the least, impeded. I venture to submit that the same criticism might be applied to some designs for laying out estates, which have been influenced by a praiseworthy desire to escape from the old-fashioned rectangular gridiron plan of the speculative builder. To secure a more artistic grouping of buildings, however, streets are formed of snake-like curvature and with squares or enclosed places to which one outlet only is provided. The comparatively direct street can be treated without monotony and if a liberal width is assigned to it the avoidance of traffic difficulties which may hereafter arise is ensured. A plentiful supply of fresh air will probably prove more bene-ficial to the working man than a vista, and it should not be impossible to combine the two.

#### EVERY COTTAGE HAS ITS OWN GARDEN.

A feature of the County Council's estates is that each cottage has its own plot of ground at the rear. It may be a matter for argument whether the provision of an open space—of which examples may be found near Londonfor the common use of the tenants surrounding it is preferable to the backyard or warden. The latter may present problems in neatness and orderly appearance, and may not offer a view from the house windows equal to that of a well-kept open space, but the privacy of a back garden is undoubtedly regarded as a great asset by the tenants on the Council's estate.

#### NEGLECT OF LOCAL AUTHORITIES PROVIDED for by the Housing $\Lambda c\tau$ .

provision of accommodation under III. of the Housing Act, 1890, has usually been looked upon as entirely optional or voluntary on the part of the local authority. The Housing and Town Planning Act of 1909, however, provided for cases of default where four inhabitant householders of an area complained to the Local Government Board that

powers have been of considerable assistance in securing the provision and improvement of cottage homes throughout the country can be seen from the last report of the Local Govern-ment Board, who have also shown much activity in the collection of general information as to housing conditions in England and Wales. Three years ago, in many rural districts, notifications were posted of public inquiries into the sufficiency of housing in the district. I am not aware of the official result of such inquiries, but in the same part of the country which I recently visited, and where I had noted the announcement of official inquiries, I was invited to make an inspection of an estate which is being built by a local landowner. This not only embraced the provision of first-class houses, orchards, a suitable area of ground for cultivation, with piggeries and poultry accommodation of the most modern type to each cottage, but the whole project was laid out in a workmanlike manner, on sound principles of town-planning. The estate was being dealt with in a completely voluntary spirit and for the workers' benefit, and this exemplifies one of the useful effects of that Act.

#### THE INEVITABLE CONCLUSION.

What inevitably must the conclusion be? I am sanguine enough to think that when you compare the value given from either an educational, a social, or an independent aspect, the proper way to house the workers. wherever it is practicable, is at the out-skirts of the city or town, where con-venient transit should be made a part of the scheme. I am aware that many will talk of the loss of time and expense in travelling, etc. I am going to add my opinion that the public would be healthier and better if they walked more. Apart from the question of land value, on which the accommodation is built, there is on the fringe of the county the further marked economy of the building works. Having the environment in mind and the physical and moral advantage to the family, which method do you think the great sanitary reformer Chadwick would have chosen? I have long ago concluded in my own mind that the weight of opinion must go with the suburban cottage, and I think I would have had his endorsement.

Mr. C. T. Adshead, F.R.I.B.A., inquired whether all the estates of the London County Council, and in particular the Caledonian Estate, Liverpool Road, were self-supporting, Mr. Riley replied that they all paid a return

on the capital outlay, varying last year from 2.58 per cent. on the Norbury Estate, which was only partially developed, to 7.14 per cent, at Totterdown Fields, where the land was completely covered.

Mr. Adshead said this was highly satis-

as rot subsidised.
Lar result of the capita.

Section 23 of L.C.C. General Powers Act, 1909, with regard to the construction of buildings wholly or partly of reinforced concrete and with respect to the use and composition of reinforced concrete in such construction have been allowed by the Local Government Board, and will come into operation on January 1 next. The committee added:—The question now arises as to the steps to be taken to comply with Section 23 (5) of the Act as to the publication of the \*regulations in the London Gazette after they are allowed. We are advised that the regulations must be published in full. publication will serve no useful purpose, and in view of the expense involved, which estimated at £180, we have asked the Local Government Board whether in its opinion it would not be sufficient to adver tise the fact that the regulations have been made and allowed, and that copies may be purchased at the Council's publishers. In reply, the Board states that it does not differ from the Council in regard to the utility of publication in extenso, but that, having re gard to the language of the Act, it is unable to escape from the conclusion that such publication is obligatory upon the Council and is a condition precedent to the coming into operation of the regulations upon such day as the Board may fix. We have also suggested to the publishers of the London Gazette that they should utilise the type which is at present standing, the Council paying to the publishers any profits which would have been made by them had the profits which regulations been published in the Gazette in the ordinary way, and in reply a letter has been received from H.M. Stationery Office regretting that the proposal cannot be enter tained. It appears, therefore, that the regu-lations must be published in the ordinary

There is a provision of £40 in the votes the current financial for the current financial year, and a supplemental estimate of £140 is therefore necessary. We recommend-

That the supplemental estimate (No. 154) of expenditure on maintenance account of £140 submitted by the Finance Committee in respect of publishing in the London Gazette the regulations made by the Council on July 6, 1915, under Section 23 of the London County Council (General Powers) Act. 1909, as to reinforced concrete, he approved as an estimate of cost, debt, or hability under Section 89 (3) of the Local Government Act, 1888.

The Finance Committee, having considered in its financial bearings the above-mentioned estimate, submit the same as chargeable to maintenance account. The total expenditure The total expenditure involved in the publication, in the London Gazette, of the Council's regulations as to reinferced concrete is £180. The type of the regulations is standing, and at quest of the Finance Committee the Building Acts Committee endeavoured, but without success, to make arrangements whereby this type could be used, the regulations being issued as a supplement to the Gazette. Finance Committee are strongly of opinion that the proposed expenditure, which both the Local Government Board and the Buildboth ing Acts Committee admit will serve no useful purpose, is most difficult, in present circumstances, to justify, but in view of the legal necessity for advertising the regulations, and the failure of the efforts made to reduce the expenditure thereon, there appears to be no alternative but to submit the

 $\begin{array}{cccc} {\rm CASE} & {\rm LAW} & {\rm UNDER} & {\rm THE} & {\rm FINANCE} \\ & {\rm ACT.}^* \end{array}$ 

By E. M. Konstam (Visitor), Barrister-at-Law.

Before attempting to summarise the cases decided under the Finance Act of 1910, it may be as well to enquire for a moment what principles our Courts apply in interpreting statutes. It is not too much to say that most statutes are obscure. But the Courts, unless absolutely driven to it, are loth to think that they are meaningless, that they are passed in ignorance of previously existing law, that they are intended to disregard the practical realities of life, or that they are enacted for the purpose of committing injustice. there is a rule that a statute must be construed according to what it says itself, and not by what was said about it in Parliament, Anybody who has ever had to wade through Hausard and read the Debates on a Bill, will at once appreciate the necessity for this rule. For all these reasons there has been invented an imaginary person called the "draftsman," who takes the blame of all the defects of the Act, but who is by courtesy supposed to know the facts concerning the subject in hand, to have just intentions, to be aware of the law as it stood before the Act was passed, and even (though this is a large assumption) to remember what was enacted in the last section but one, and in the definition clause.

When in the face of the language of the Act these flattering suppositions can no longer be made, when it becomes quite clear that the section is hopelessly unpractical or has been passed in order to work injustice, the "drafts man " is dropped out, and judge and counsel prefer to speak of "the Legislature in its wisdom"—a phrase which. I fear, is sometimes not meant to be taken literally. We shall find instances of all kinds in the cases decided under the Finance Act; some sections drawn with knowledge of practical realities, others in complete ignorance of facts, some drawn with a just intention, some clearly intended to be unjust, others "willing to wound and yet afraid to strike," in which the desire to commit injustice has not been expressed with precision.

Let us now examine the decided cases.

It will be convenient to take the principal cases decided under Part I, of the Act in the order of the Act itself; and in this way we may begin with the name of Lumsden, so inseparably connected with the increment value duty. I am quite ignorant of the motives which induced Mr. Lumsden to fight the case up to the highest Court in the country, but if his object was to show the inherent injustice of this duty, that object has certainly been attained, and radical alterations in its nature have been promised in consequence of the decision in this case. Perhaps if it had not been for the war, those promises might even have been fulfilled! But let us leave the region of speculation and come to facts. The case, which is reported (1913) 1 K. B., 346; 3 K. B., 809 (1914), A. C., 877, arose upon Section 2 (2) of the Act. Land with a building upon it was given in the provisional valuation an original site value, as on April 30, 1909, of £105. The property was sold in August, 1910, for £750, subject to a tithe of £33 capital value. It was found in the case stated by the Referee that if a fresh valuation of gross value was to be made as at the time of the sale that gross value would be £658 The full site value on the earlier date was £228,

The appellant contended that, for the purpose of calculating the deductions to be made from the consideration or purchase price, which is set up by Section 2 (2) (9) as the standard from which the site value on the occasion of sale is to be ascertained, the price realised plus the capital value of the tithe must be taken to be the gross value as at the time of the sale. The Revenue contended that for this purpose the true gross value must be ascertained by valuation. If Mr. Lunisden was right, there would be no increment value; if the Revenue were right, the duty was leviable on an increment value of

Taking all the Courts together, four of the judges were in favour of the Crown's contention and three in favour of Mr. Lumsden's The result was that increment value duty is leviable upon the increase in value of a composite property consisting of land and buildings instead of on the increase in the value of the site alone; and as it has been agreed that this is a bad result from the point of view of public policy, there is little now to be gained by a discussion of the judgments delivered. But if those of the dissentient judges are read, it is difficult to avoid the conclusion that they were actuated by a desire to believe that the Legislature had not intended to enact the injustice of taxing man on the increase in value of property due to his own exertions, and that its sole intention was to tax-justly, as some think-the unearned increment in the value of bare land The majority of the judges, on the other hand, thought—(1914) A. C., 895—"that Parliathought—(1914) A. C., 895 - that Parliament must, on the literal construction of its language, be taken to have contemplated the possible taxation of either something more or something less than site value, strictly

called."

The House of Lords, in "Inland Revenue to Walker" (1915) A. C., 509, followed their former decision, although the special case as stated by the Referee was, perhaps, rather more favourable to the appellant than that the control of the special case. The problem have were in Lunisden's case. The purchase here made by a sitting tenant, and their lordships held, further, that an additional sum of £180 included in the purchase-money could not be excepted in arriving at the consideration for the purposes of the calculation under Section 2 (2) (a). The Referee inferred that this extra sum had been paid by the pur-chaser to avoid being disturbed in his occups tion of the premises; and although it is true that the House thought there was not sufficient evidence to support this inference, only one of the Lords appears to have decided against the deduction of this sum of £180, on the ground that even if the reason of being paid had been established in fact, it was madmissible in law. Unless, therefore, this point is concluded by Clay's case, with which I shall lead later, it appears to be still open.

In the case of "Hayllar r. Inland Revenue" (1914), 1 K.B., 528, Parliament was held, in Section 2 (3), though it had purported to provide for a substituted site-value in the case of a decline in value after a mortgage, to have enacted what was "almost illusory as a benefit to the owner." "It seems to me irrational and absurd, but the language is too strong, said the Master of the Rolls, and proceeded to hold that the amount of the actual mortgage debt must be taken as the gross value for the purpose of calculating the site-value as at the time of the mortgage, and of substituting that site-value for the site-value ascertained as on April 30, 1909. The true gross value at the date of the mortgage was, as everybody with experience of the management of land knows, probably about half as much again as the amount advanced on mortgage; and if a sitevalue based on the true gross value could have been substituted, the owner of the land might derive some real benefit from the provisions of Section 2 (3), which are supposed to protect him from paying an excessive increment duty in addition to suffering a depreciation of his property. As it is, the benefit enacted "merely illusory." Did the "draftsman intend that, or had he so little experience of transactions in land as to imagine that "the amount secured by the mortgage" generally represents the full market value? Neither alternative is creditable to "the Legislature in its wisdom."

The next duty in the order of the Act is the Reversion Duty, and the leading case upon it is that of Inland Revenue v. Marquess Camden (1914) 1 K. B., 641; (1915) A. C., 241. In this case the Courts strained the presumption of good intention almost to breaking point in favour of the "draftsman." They held, in short, that Parliament, if it was ignorant of the practice in connection with leases of land, or, if knowing that practice, it desired to enact a grave injustice, had not reversion duty are as follows:—The "value expressed that ignorance or that intention in sufficiently clear words to be effective. Laid down in Section 13 (2) ("Ramsden v.

The material passage from Section 13 is as follows:-" The total value of the land at the time of the original grant of the lease, to be ascertained on the basis of the rent reserved and payments made in consideration of the lease (including, in cases where a nominal rent only has been reserved, the value of any covenant or undertaking to erect buildings or to expend any sums upon the property). Applying to these words a usual canon of interpretation, that the specific mention of one alternative implies the definite exclusion of the other, it might be thought that the value of such a covenant or undertaking was intended to be excluded in every ease where the rent reserved was more than nominal. And if anyone were to infer, say, from the curious drafting of Section ? (3), remarked upon by the Court of Appeal in Hayllar's case, that the hand that drafted Section 13 was the hand of one who was not perfectly familiar with the course of transactions in land, such a captious critic might suppose that the draftsman when he was penning this section had recalled some iscence of a thing sometimes paid by vague remmiscence thing called perpercorn. people who built buildings, and had proudly put his dangerous little piece of knowledge into a parenthesis.

But the Courts have fortunately taken a more serious, and no doubt a juster, view. They have held that the draftsman could not have been ignorant of the fact that in countless cases building agreements are entere into in the first instance, sums large or small are then expended on construction, and leases at rents by no means nominal are granted after the buildings have been erected; and they have held that the Legislature could not intentionally have committed such an ineptitude as to inflict a heavy penalty of additional reversion duty in such cases. Accordingly they have held that sums expended under a building agreement are "payments made in consideration of a lease" subsequently granted, even though the rent erved in that lease is not nominal. When it is remembered that a building agreement is usually an agreement for a lease, and that by the definition in Section 41 "lease" includes an agreement for a lease, this result

becomes somewhat remarkable.

Seven judges were unanimous in arriving at the conclusion just summarised; four out of the seven deemed it best to ignore altogether the existence of the parenthesis; while those who assigned a meaning to it at all said that it applies only where there is an agreement to spend money after the granting of the lease itself, and not where money has been spent beforehand. But this interpreta-tion itself still leaves the parenthesis un-disturbed where it does apply: thus where there is no building agreement, but only a lease with a covenant to erect buildings or incur expenditure in the future, that covenant will ant will not be taken into account except where the rent reserved is a nominal rent. Certain dicta of their Lordships, however, leave it open to be contended that almost any rent below a rack-rent is a "nominal rent"; and more may be heard of that point in times to come.

One practical result of this case will be that it will in future be to the interest of the lessor, where the lessee contemplates erecting buildings or incurring expenditure, to grant an agreement for a lease in the first instance; and this not only in the case of ordinary house-building operations, but in the case of companies or firms about to erect large works; in fact, in the case of all new or expanding undertakings which are not upon freehold sites. Where there is likely to be further expansion, or a subsequent renewal of the lease, this course will be to the lessee's interest also. Industry will thus be penalised by having (often quite unnecessarily except for the reversion duty) to have to go through the cumbrous and expensive process of nego-tiating an agreement with the landowners twice instead of once. But perhaps I ought not to complain, for the profit will be to the

Other points decided in connection with

fuland Revenue " (1913), 3 K.B., in ascertaining that value no deduction i to be made because the lease is surrendered "Inland Revenue v. Marquess of Anglesey (1913), 3 K.B., 62); nor because it was granted upon the surrender of a previous lease ("Inland Revenue v. St. John's College, Oxford ' ' (1915), 2 K.B., 621); the total value on the determination of a lease includes the licence value of a public-house ("Earl Fitzwilliam v. Inland Revenue" (1914), A.C., 753); a marriage settlement does not exempt from the payment of reversion duty under Section 14 (1) ("Inland Revenue v. Gribble" (1913), 1 K.B., 220).

The decision in "Inhand Revenue v. St. John's College, Oxford," just referred to, is important with regard to the assessment of reversion duty where the lease is one of those periodically granted, according to the practice of many corporate bodies, upon surrender and the payment of a fine. that case, when the previous lease was surrendered in 1896, it had twenty-six years unexpired. The lease surrendered in 1910 had been granted in 1896, at the rent reserved in the previous lease for a term of payment of a fine of £95 8s. forty years on What was in effect granted was an additional fourteen years' lease at the expiry of the original term. The fine had been calculated, putting the two guineas rent on one side, at wo years' purchase of the annual value of the property; and two years is practically (according to Willick's Tables) the present value of a lease for fourteen years deferred twenty-six years. The Crown contended that the sum of £95 8s, was to be taken as a premium for a forty years' lease (as it nominally was) and reduced to an annual sum as if the property had been in hand when the lease was granted, which was not the case. Mr. Justice Rowlatt held that that contention was wrong, and that the College was right in saying that the total value at the grant of the lease in 1896 was to be calculated on a basis of adding to the rent reserved of £2 2s, the additional anunal value of £47 14s. (half the fine which represented two years' purchase), these being in truth the payments made in consideration of the The learned judge said that be had to apply the words of the statute "perfectly strictly, but so as to make them operate in a sensible way by reading 'payment' with regard to that for which the payment was made, and not by taking the payment as being made for the same thing in the case of an immediate term granted, and in the case of a deferred term granted upon the surrender of an existing lease. No one who understands these matters will be inclined to differ from that conclusion.

The cases as yet decided by the Courts in regard to the undeveloped land duty have been comparatively few. Among these that of "Southend-on-Sea Estates Company, Limited" (1915), A.C., 429, is, I think, the most recent and probably the most far-reaching. Section 17 (5) prevents the duty from being levied where agricultural land is held under a tenancy originally created Lefore April 30, 1909; but if the landlord has power to determine, the duty becomes leviable as soon as he can exercise the power, whether he, in fact, does so or not. In numerous cases the Inland Revenue attempted to levy the duty where there was power to determine in case the land should be required for purposes of building, and so on, sought to say that it was immaterial whether the land was really required for those pur-poses; if the power exists, they said in effect, and the landlord is the sole person to decide whether he shall exercise it, then he can at any time determine the tenancy, and he is liable for the duty. The Court of Appeal and the House of Lords have rejected that contention, and have held, where the right reserved was "at any time to resume possession for building or other purposes" that "other purposes" meant purposes," that "other purposes" meant purposes of the same kind as building, and that if the landlord had no such purpose he had no power to determine, even he might have power to form the purpose. Technically, no doubt, this was merely a decision upon the particular form of words

The Court refused the contention of the Crown, and held that Form 4 was not the return referred to in Section 23 (2) because it was not a proper or intelligible mode of requiring a return of particulars respecting the numerals, and certainly did not treat them. as the Commissioners were bound to do, as a separate parcel of land." Mr. Justice a separate parcel of land." Mr. Justice loyce, in delivering the judgment of the Court, referred to Form 6 as being possibly, with some slight modifications, the form applicable; so that if there is any case which a proprietor, having a return called from him in Form 6, has assigned no value to the minerals, it is possible that the conse-quences aimed at by the Inland Revenne may ensue, but such cases must be very rare. The Commissioners have certainly been un-fortunate in their drafting of Form 4, both in regard to that ill-starred question in which they asked for the owner occupier's estimate of the annual value of his land, and in regard to the question concerning numerals. It is difficult to resist the conclusion that they were trying to trap the taxpayer into uncensciously making admissions damaging to himself, or to sympathise with them now that they have been hoist with their own petard.

Reference to the case of Form 4 (Dyson v.

Attorney General [1941] 1 K. B., 410) brings us to the other cases decided with regard to the general valuation. That case itself is now, perhaps, ancient history, and need not be dwelt on. But there have been several cases of great importance decided upon the cases of great importance decided upon the portentous Section 25. Everybody in this room is no doubt familiar with that section—if it is not presumptious to use the word familiarity in relation to such a Frankenstein's monster—and I do not propose to add to the length of this Paper by reading it; but it is comforting that even so perspice as a lade of the contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract of the second contract forting that even so perspicuous a judge as forting that even so perspicuous a judge as Lord Moulton was puzzled to know, as he said in Inland Revenue v. Herbert (1913), A. C., 325, at page 358, " for what reason the draftsman chose to express the definition (of full site value) in so peculiar a fashion. It is not too much to say that Clause 14, as it was when originally drafted, was a monument of illiteracy; and the draftsman who was brought in on the Report stage, like the second collaborator who is sometimes called in in the theatre to "pull the play together, 'seems to have re-written the section with some desire to give it a logical appearance: but the effect of his doing so has been, as decided by the House of Lords in the Scottish case just referred to, that in certain cases the assessable site value ascertained under Section 25 may be a minus quantity.

It was strennously argued that the value of bare site could never be less than nothing; and that Parliament must have legislated in view of that obvious fact. The effect of the decision it that Section 25, in its main lines, has little to do with real life, and merely mescribes the solution of an academic pro-

The success of the Crown in this case thus a much greater condemnation of the Act than its failure would have been. doubt the object of its contending for minus site-values was to increase the amount leviable as increment value duty in the cases concerned. But it has gained that tactical concerned. But it has gained that tactic victory at the cost of a strategical defeat.

Incidentally, two of the learned lords (pp. 355, 362) expressed views which are, at first sight, somewhat surprising as to the meaning of site value in Section 3 (5), which provides for a 10 per cent reduction upon the collection of increment value duty. These views, which were not a part of the decision of the House, and are not in complete agreement with each other, have not, as I gather, been acted upon by the Iuland Revenue, and I have not heard that my taxpayer has claimed the benefit of that my taypayer has craimed the records of them; they were negatived in the Revenue Bill of 1914, which did not pass into law; but they show how difficult it is to inter-rect the Act so as to arrive at a practical

The basis of the calculation directed by otherwise Sective 25 is the value of land "sold in the the sale or open market by a willing seller," and has marked at been discussed in the cases of "Inland Re-dictive the part of Cax and Buchanan" (1914), 3 K.B. 365, and of "Glassir, Inland Revenue"

(1915). S.S.C., 449. In the English case Lord Justice Pickford said, at pp. 478-9: in the open market means sold in such a way that anyone wishing to purchase was able to do so,  $\epsilon, g$ . by auction or by putting the house into the hands of an agent to sell; and I think a willing seller means one who is prepared to sell, provided a fair price is obtained under all the circumstances of the case. I do not think it means only a seller who is prepared to sell at any price and on any terms, and who is actually at the time wishing to sell. In other words, I do not think it means an anxious seller. The gross value is not to be measured necessarily by the price given by a bayer who is peculiarly in need of the particular piece of property, but it seems to me clear that the of there being such a person in the market must have an influence on the value in the open market. Upon these principles, which must commend themselves to all who bring any experience of sales or valuations of land to bear upon the question, the Courts have held that where the trustees of a nursing home desired to extend the home by acquiring the house next door, and where a water board desired to acquire lands within their catchment area, the value to the trustees and the board was the market value of the house or land, and that it was not true to say that the market value was the value to outside purchasers with a mere pound or two added to represent the extra bid of the nursing home trustees or the water board.

Tenant-right, i.e., the value or unexhausted manure or tillages, is included in gross value and total value, and is not to be deducted as a matter personal to the occupier ("Inland Revenue v. Smyth" [1914], 3 K.B., 406); neither is the value of the land laid down in grass. The same decision, however, directed the value attributable to grass to be included in gross value, but to be deducted in "divesting for arriving at full site-value.
The meaning of structure in the divesting clause was considered, and the road in that case was held, from its construction, to be a "structure." Sea-walls and drainage dykes "structure." Sea-walls and drainage dykes are not "buildings" or structures connected with buildings ("Waite's Executors v. Inland Revenue" [1914], 3 K.B., 196); nor are the dry stone walls which so familiarly re-North of England ("Morrison c. Inland Revenue [1915], 1 K.B., 716). The value of agricultural land for agricultural purposes does ont include its value for sporting purposes ("Inland Revenue v. Hunter" [1914], 3 K.B., 423). The cases of Smyth, Hunter, and Morrison are still under appeal to the Court of Appeal, and the effect of the various decisions just summarised appears to have been to delay indefinitely the valuation of agricultural land

A very similar effect has been produced upon the valuation of land developed by buildings by the decision in Inland Revenue v. Whidborne's Executors (1915), 2 K.B., 350, where deductions were allowed in respect of the appropriation of land for roads, and of the construction of roads in an ordinary building estate: and the deductions took the form of a single sum applying to each building plot, being the percentage of its total value attributable on April 30, 1909, to the dedi-cation and construction of the roads. In face of the language of sub-section (4) it is difficult to see what legal contention the Crown could put forward against the allowance on principle of the deduction; and perusal of the reported arguments of the Law Officers did not solve the doubt. That they felt the difficulty themselves is shown by the fact that their chief attack was directed against the form of the deduction. They failed both on the question of principle and on the question of form.

From this, I fear, somewhat dreary review of the cases decided under the Finance Act of 1910 a few salient points emerge: the increment value duty is, by the victory of the Crown in the Lumsden case, shown to the convincing of most parties to work in-justice in the case of the building industry. and thus to impose an additional fetter on the housing movement: the reversion duty is, by the refusal of the House of Lords in Lord Camden's case to believe in the unjust

intention which the language of Section 13 goes far to substantiate, much reduced in its possibility of yield; the increment value dnty as regards minerals is in a state of flux; last and by no means least, the national valuation—the new Domesday Book—the inaugurator of the millennium remains suspended because the Courts have held that certain sub-sections of Section 25 are capable of a practical application to agri cultural land and to land covered with bouses. The valuation machinery cannot proceed, because it has been held that the valuation must, in part at any rate, be made in the light of actual fact.—But a political truce now prevails in the country, and their will be no peroration to this paper.

CATHEDRAL CHURCH OF ALL SAINTS, KHARTOUM, SUDAN.

Towards the end of the year 1913 an ap peal was issued for funds to enable the committee to proceed with the crection of the tower, which still remains to be done in order to complete the building. A considerable sum had been guaranteed provided the remainder was forthcoming by October 1, 1914, but unfortunately the war came on, the flow of donations ceased, and the whole matter has been shelved for the time being. All the working drawings had heen prepared by the architect, Mr. Robert Schultz Weir, in anticipation of the work being shortly proceeded with, and we illus-Royal Academy drawing from this year's exhibition. The tower will be detached from the main structure, but connected with it by a covered passage leading from the narthex to the lower stage of the tower, which is intended to form the baptistery. Above this would come the ringing chamber, approached by a staircase entered from the outside at the ground level and going up in one angle (as shown in the plan). Still higher comes the clock chamber, and above that again the lantern, open on the four sides. From this high position a the four sides. From this high position a good view would be obtained of the city, the junction of the White and Blue Niles just below, and Omdurman beyond. Owing to the treacherous nature of the subsoil special precautions are necessary, and reinforced concrete foundation raft has therefore been provided for. The baptistery will be constructed internally of dressed coursed ashlar, and will be vaulted in stone. It will have an apse on the eastern side. The font will be placed central with the connecting passage, so that it can be seen from the narthex of the church, and open bronze grilles will be placed at the tower end of the connecting passage. The external face of the tower will be of random rubble, like the wall of the church, with dressed coursed corners and windows. These latter will be filled in with pierced stone slabs, glazed in the case of the bap-tistery and open above. The lantern will all be constructed of dressed stone. Access will be obtained to the storys above the ringing chamber by means of iron ladders going up through the openings left in floors for getting up the bells. These ladders will be easily removable. It is only proposed to have one large deep toned bell, but the space provided is sufficient for a peal, should a generous donor come forward pay for one. A clock is provided for with dial on each of the four faces. These to pay for one. dials would be illuminated at night by electrie lights at the end of long bars sticking below, and arranged so as to reflect the lights directly on to the dials. On the small pinnacles at the four corners of the top of the tower will be cut the sacred ciphers: IC-XC: YC-OY: ΦC-ZC: NI-KA ("Jesus Christ: Son of God: Light of the World: Conqueror"). We gave a general view of Khartoum Cathedral on January 5, 1912, from the source or In an early showing the building from west, but without the tower. issue we have arranged to publish the working details of this interesting piece of work, lent us by the architect for illustration.

PREMISES FOR THE GENERAL MEDI CAL COUNCIL, HALLAM STREET, W.

The building is erected on a site formerly occupied by small dwelling-houses of no par ticular interest. The structure is of brick and steel with reinforced hollow tile floors The front is faced with Portland stone. ground floor contains the general offices, cloak-The first floor is approached by rooms, etc. separate staircases for the public and for members, and contains the council room and three rooms for committees or for consulta The mezzanine floor gives access to the galleries at each end of the council room and to two committee rooms. The second floor contains the dining room, service room, lavatory, smoking room, and one committee room. The kitchens and caretaker's rooms are in the attic; the basement contains the storage rooms for registers and the heating cellars. The elevation to Hallam Street is developed from the plan, and shows a central feature of a from segmental bow carried up ground to the top of the second floor. large windows of the council room are divided by pilasters supporting figures representing the attributes to the functions of the council concerning the education and registration of the medical profession in Great Britain and Treland The emblem of medicine is carved in low relief above the centre window. The sculptured ornament above the entrance is replaced in execution by a relief representing the cult of Asklepios. The sculpture gene-rally is the work of Mr. F. Lessore and his assistants: it is distinguished by great delicacy and refinement in execution. general contractors are Messrs. Chinchen and Co., who have employed as sub-contractors Messrs, D. G. Somerville and Co., Limited, 120, Victoria Street, S.W., for the floors and reinforced concrete; Messrs, James Boyd and Sons, 196, Great Portland Street, W., for the heating; Messrs, Burn Bros., 3, Blackfriars Road, S.E., for the sanitary engineering; Messrs. Gent and Hurley, 24, Belvoir Street, Leicester, for the electrical work; and Messrs. Waygood-Otis, Limited, 3, Falmouth Road, S.E., for the lifts and vacuum cleaner. The building is creeted from the designs and under the superintendence of Mr. E. C. Frere, A.R.I.B.A. The illustration is from a drawing by the architect exhibited in the Royal Academy.

## SOANE MEDALLION AND TRAVELLING STUDENTSHIPS DRAWINGS IN ITALY.

THE CORTILE, PALAZZO FAVA, BOLUGNA, This palace, situate opposite the church of La Madonna di Galliera at Bologna, was built by Giov. Batt Jarri in 1689, and still remains unfinished. The cortile is very handsome, and is adorned with the works of Carracci. The great hall is decorated with scenes from the history of Jason, the first work in fresco by Agostino and Annibale. In the adjoining chamber the Voyage of Eneas is portrayed by Lodovico. Other rooms are enriched by other subjects, including the Rape of Europa. The Story of Eneas, painted in opposition to a frieze by Cesi in apartment, was, it is said, the turning point in the lustory of Carracci. Details of the arcade on brackets in this cortile were published in our issue of November 11, 1898,

CHURCH OF LA MADONNA DEI MIRACOLI, BRESCIA.

The rich einque cento portico of this church Vittorio Emanuele, and it is is in the Corso the richest building of its kind in Brescia. The date of its erection is set down as 1480. and Lod. Beretta carried out the decorations of its façade, which was designed by Gian of its façade, which was designed by Gian Gasparo Pedoni, of Cremona. Those of the interior are quite Venetian in character. The church contains some excellent paintings by Moretto. His beautiful picture of St. Nicholas presenting two school-boys to the Virgin is fully described by Mrs. Jameson in her "Sacred Art": "This is an application of the religious character of this saint to nortraiture and character of this saint to portraiture and common life which is highly beautiful and poetical. St. Nicholas is presenting the Virgin two orphans, while she looks down upon them from her throne with a benign air, pointing them out to the notice of the Infant Saviour, who is seated in her lap. The two boys,

orphans of noble family of Roncaglia, are richly dressed; one holds the mitre of the good bishop; the other the three balls." These drawings now reproduced on our plate form the series of sketches made during his Travelling Studentship tour by Mr. Alick G. Horsnell, Soane Medallist and Tite Prizeman. We illustrated, from a photograph, the main façade of the church in The Bulling News for August 20, 1897.

#### ENTRANCE LODGE, "BU FAIRFORD, GLOS. "BURDOCKS,"

We give the working drawings of this pretty and commodious lodge, built some short time since, at the same time that the house was being erected. The work was carried ont in local stone for the general walling and dressings, the stone slates being obtained from the Eyford Quarries, Stow-on-the-Wold. details will explain themselves, and an endeavour was made to treat the building symmetrically on all sides, as it is in a conspicuous A view of the house itself, with dan, will be found illustrated in the BUILDING News for June 23, 1911, from the architect's drawing. The estate is about a mile from Fairford. The builders of the lodge and stables and shell of the house were Messrs. Sells Bros., of Fairford, and the architect was Mr. E. Guy Dawber, F.R.I.B.A., of London.

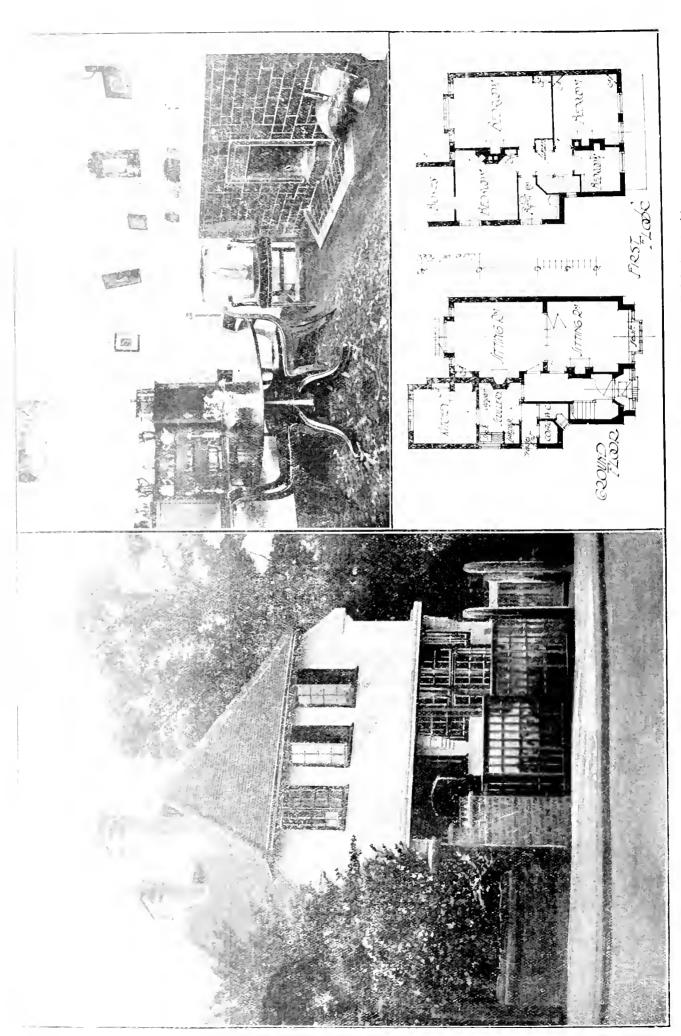

# AN ARCHITECT'S HOUSE, CHURCH END, FINCHLEY, N.

This cottage-like home has been built for the architect's own occupation at a cost of about £550 on rather a narrow plot of ground, and economy both as to planning and materials was a prime consideration. exterior walls are built of rough stones limewhitened, and the roof is covered with sandfaced tiles. The chinneys are of picked stock brickwork. The interior is very plainly treated, with no cornices, but a good effect is obtained by the use of heavy picture rails. The recessed fireplace in the parlour has a long expanse of vainable tiles and long shelves over for china, etc. Messrs, Maltock and Parsons, of Gray's 1nn Road, were the builders. All the chimney pieces, both wood and iron, were designed by the architect. Mr. II. S. East, A.R.I.B.A., of Gray's Inn. We give two photographs of the house and the pair of plans on one plate.

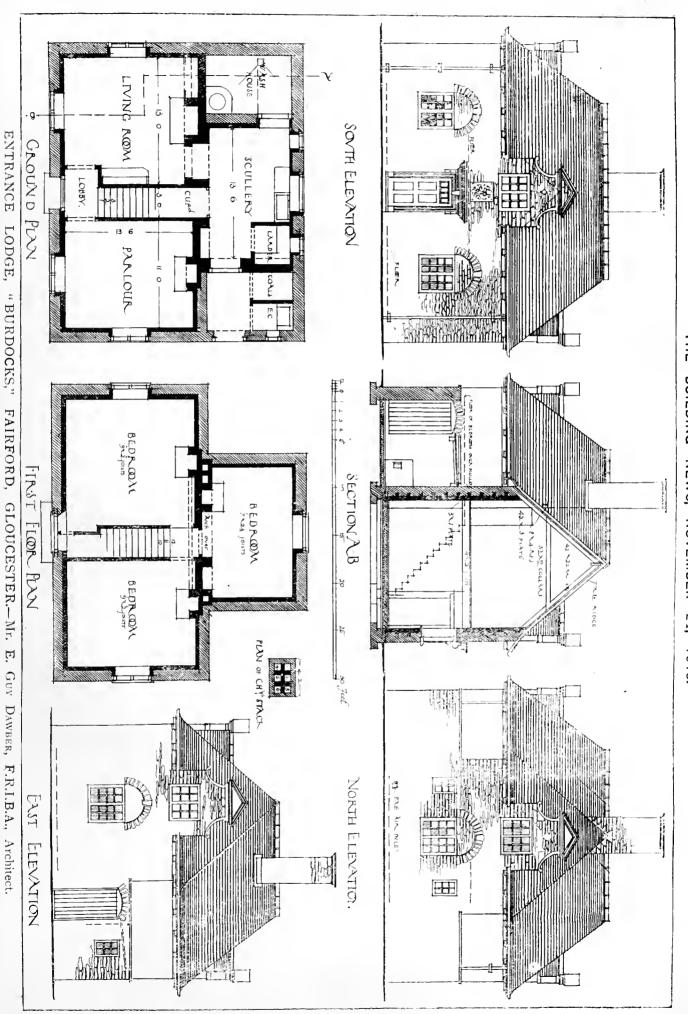

#### OBITUARY.

Sir James Stewart Davy, who was from 1905 to 1913 Assistant Secretary and Chief General Inspector of the Local Government Board, has died at his residence, Wintergreen Wood, Pyrford, in his sixty-eighth year. Sir James Davy was the son of Mr. John Davy, of Jamaica, and was educated at Uppingham School and at Balliol. In 1872, shortly after taking his degree, he entered the Poor Law service. In 1873 Mr. Davy was transferred to the Lancashire Poor Law district, and in 1876 he was appointed permanently as Assistant General Inspector. In 1878 he was appointed General Inspector for the East and West Riding of Yorkshire, and in 1886 was transferred to the Kent and Sussex district, where he remained until his appointment as Chief General Inspector in 1905. During these last nincteen years he was employed in many public inquiries. In 1905 he gave evidence before the Royal Commission on the Poor Laws, occupying six days, and though his suggestions were not all accepted, he was able to carry out many desirable reforms which they recommended. He was appointed a C.B. in 1902, and in 1911 he was created a. K.C.B.

Mr. Burkett J. Emery, a member of the Birmingham Architectural Association, and a licutenant in the Mid Birmingham Battalion. Warwicks, is reported " missing, believed killed." Reports from brother officers show that Lieut, Emery acquitted himself very gallantly, and, after being wounded, kept in charge of his section in the action. which occurred on or about October I2. Lieut. Emery's architectural works consisted of several factories and domestic buildings in the Midlands. He had been in practice at 109, Colmore Row. Birmingham, for about six or l seven years,

any street been made of less than the legal minimum width. It is discreditable that the Government has ignored this essential, and has set at naught the law on the Well Hall scheme, where the areas are laid out with streets of 40 ft, and 30 ft, widths, thus travers ing an Act of Parliament which has regulated every new building scheme within the county for the last twenty years. One result of this will be that when the war is over and half the houses are empty they will remain so unwel come testimonies to the unwisdom of the Government, which, in addition, setting at naught Parliamentary enactments, has used weather boarding as an external covering. with timber at its present rumous price, and the mevitable heavy cost in the future of maintenance of so obsolete a material!

Our report of the London County Council meeting this week furnishes another instance of Government "economy"! As readers know, new regulations have lately been made for buildings constructed with reinforced concrete, and the Council suggested that the Local Government Board should now excuse the full publication of the regulations in the "London Gazette," which will cost £180. The Council pointed out that it would do as well merely to advertise the fact that new regulations were in force, so that the few who wanted them could buy them at the Council's offices, adding that full publication in the "Gazette" would serve no useful purpose. But though the Local Government Board agrees with the Council that no useful purpose would be served, it insisted on publication. The Council then suggested that a few pounds could be saved if the "London Gazette " utilised the type which the Council already has, but H.M. Stationery Office declines, and so the L.C.C. is obliged in these hard times to spend £180 on what Whitehall agrees is no useful purpose. The new regulations, we may remind readers, were published in extenso in our issues of July 14. 21. and 28. and August 4 last.

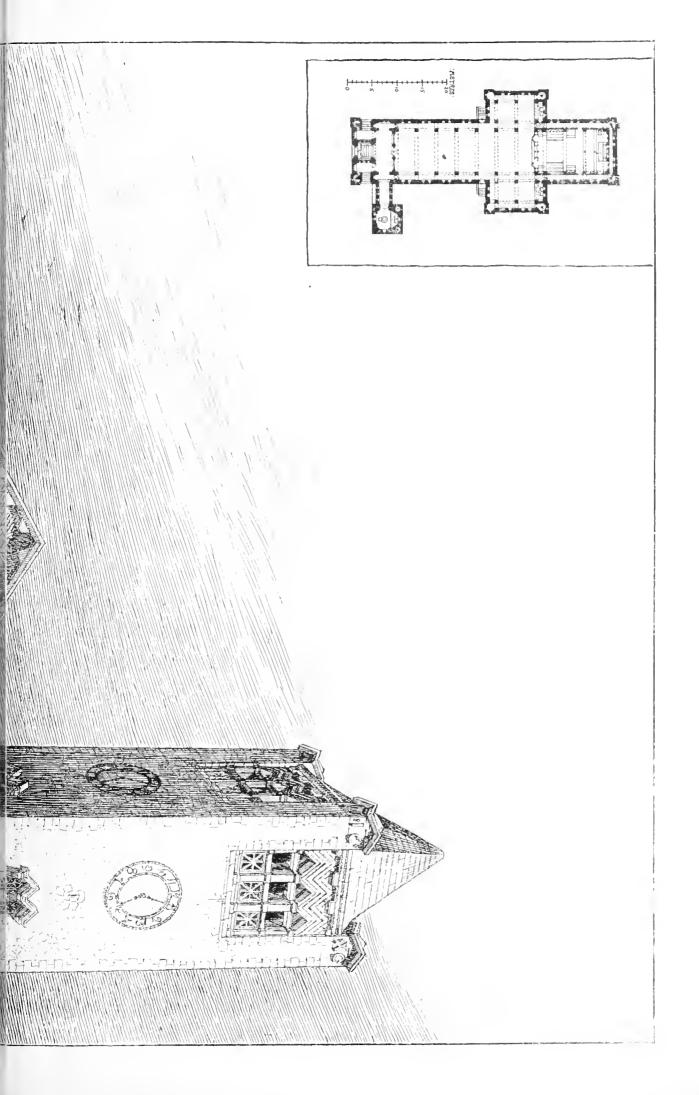

The valuable paper read by Mr. E. M. Konstam at the Surveyors' Institution on Monday is a melancholy testimony to the unwisdom of Mr. Lloyd George's finance and the disastrous consequences it is entailing on the nation. Second only to the burden of the war the economist beaeifter will rank the folly which crippled the second great group of industries in the realm and stopped the housing movement. For the present, as Mr. Konstam remarks, "a political truce prevails, and it seems impossible to get Munisters to open their eyes to the pernicious effects of the legislation for which they are responsible. We have so often deplored the disasters we are all feeling, directly or indirectly, that we can only once again record our regrets at the apparent hopelessness of the present situation and the blindness of tilese who have brought it about and have broken their subsequent pledges to retrace their steps.

The Committee on War Damage, which wish to serve will only accept as instituted only on the 28th ult., is making head to be the president, Dr. Gorder Minn. Lord Mayor of Norwich; the president of South Production; chairman of executive forces, but whose to small tee. Mr. Mark H. Judge, 7, Pall Mall. S. W.: heatorary secretary, Mr. W. H. Southon, 115 v. Chancery Lane, W.C. A memorial for presentation to the Prime Minister has been drawn up, from which we quote the following: "Although the Govern

ment scheme only came into force on July 19 last, immense loss and great hardships have been suffered in many districts, and it seems to your memorialists exceedingly unfair that these should not be borne by the nation; and notwithstanding the fact that the withdrawal of the scheme would now involve a considerable expense in the first instance, it is yet, for the reasons stated above, highly desirable that the Government should retrace their steps in the matter, repay the premiums already received, and, as trustees for the nation, proclaim their intention of giving fair compensation to the owners of property and goods that have already been, or may in future be, damaged or destroyed either by aircraft or bombardment. This, in the opinion of your memorialists, is the manifest duty of the Government, and one which they are bound by every consideration of justice, expediency, and public policy, to recognise and carry into effect." This memorial has already been approved by several corporate bodies, including the following, who have agreed to join in the presentation of the memorial :- The Municipal Corporations of Abingdon, Barrowin-Furness, Gateshead, Ilkeston, Kidderminster, King's Lynn, and Shrewsbury, and the Urban District Councils of Ashford (Kent), and Ilford (Essex).

The first meeting of the General Committee of the Engineering Institutions' Volunteer Engineer Corps, which took place last week, has attracted more attention in engineering circles than anything previously recorded as to the inception and progress of this corps. An executive committee was formed, consisting of Sir John Snell (retiring president of the Institution of Electrical Engineers) as chairman, Sir Maurice Fitzmaurice, C.M.G. (a vice-presi-Jent of the Institution of Civil Engineers), Colonel Le Rossignol, R.E., Lieut, Colonel C. B. Clay, Mr. L. B. Atkinson, hon. sceretary and treasurer; Mr. Fleming, and a representative of the Institution of Mechanical Engineers, to be nominated by the president. The report of the commandant as to the progress of the corps was most encouraging. this report he added that an arrangement had been made for sharing headquarters with the 4th Battalion City of London Regiment (Architects' Corps). The premises comprise a spacious drill hall, and above this are the necessary offices for providing for mess rooms, common room, orderly room, canteen, etc. Through the kindness of Mr. A. Campbell Swinton, F.R.S., the corps has received a present from Messrs. Crompton and Co. of a new Admiralty pattern searchlight, of which they are justifiably proud. This is being erected on the premises of the London Electrical Engineers (T.F.), where the necessary instruction will be given. Several men have already qualified in this branch, and parties are engaged each week-end on important work in connection with the defence of London. Under these auspicious circumstances, and with these comfortable and excellent premises for headquarters, the corps should prove attractive to all suitable men who wish to serve their country. The corps will only accept as new members those who are over military age, or disqualified by reasons of health, or who are engaged on war work, and who are not allowed by the Government on that account to enlist in the forces, but whose training in this corps would fit them to take part in the defence of the country in the event of a raid by the enemy, or any other emergency; and would also fit them to volunteer as trained men for service overseas if such a necessity arose at a later

HOUSING PROBLEMS IN BRISTOL.

A section of the annual report of the Medical Officer of Health for Bristol, just ssued, deals with work done under the Housing Acts in 1914, and Dr. D. S. Davies appears to him to be one of the causes of the large number of houses in Bristol letting at rentals not exceeding \$226 a year which are unfit for habitation

at the present time.

During the decades 1880 to 1900, he states, enterprise more than supplied the memand for houses for the working classes. The price of houses during these years was somewhat inflated. From 1904 onwards a slump set in, and house property has depre-ciated far below its real value; consequently no inducement is offered to undertake the repairs which are required to be done from time to time to keep the houses in a tenant able condition; hence the houses become so neglected that it requires a considerable ex penditure to put them in a thorough state of repair. Under the circumstances, the landford's only interest is to obtain as much cent as he can get for a house rapidly be-coming uninhabitable, and when pressed to carry out adequate repairs, he allows the mortgagees to take possession. Mortgagees mortgagees to take possession. n possession are at present selling houses for sums varying from £5 to £30 per house. The new landlord objects to spending a sum far in excess of the purchase money in re-pairs, to comply with the requirements of the Housing and Town Planning Act, 1909.

The construction of the older type of house for the working classes without any-or with an inefficient-damp-proof course, with its front parapet walls, and zinc gutters between the "M" roofs, and the flat nitch roofs has the "M" roofs, and the flat pitch roofs, has made it a very expensive building to keep in repair. In the poorer houses, the slightest defect in the zinc gutters or a heavy storm spoils the appearance of the ceilings and walls, as well as making unfit the room, er rooms, so affected. Owing to the absence of an efficient damp-proof course, the internal walls become insanitary, and also constant expense is involved by the frequent re-papering in order to keep the rooms decent and a presentable condition. The fixed top sash of the windows is another characteristic of this type of houses, and apart from the insufficient ventilation, it prevents the house-wife from cleaning the first-floor windows. An important defect also is the absence of ventilated larder accommodation, and the position of the larder under the stairs.

If landlords would reserve a portion of their rents for depreciation each year, and repair property more frequently, fewer houses be condemned as unfit for human says Dr. habitation. Davies. are hundreds of houses in Bristol to-day that could be saved if the roofs were stripped, parapet walls and zinc gutters abolished, and the traight or stable roof, with ridge parallel to front and back walls, eaves and rain-water shuting and down-pipes provided: efficient damp-proof courses inserted; if back-to-back houses were converted into single houses with through ventilation; if houses without through ventilation had it provided; if external walls were properly cemented or rough-casted with brown lime mortar; if lighting areas were increased and sashes made to open; plastering of internal walls made good; floors and other woodwork renewed; sink, water tap, and ventilated pantry provided. With and ventilated pantry provided. With these requirements effected there would be no cause left to condemn or demolish a house so improved. A tenant cannot reasonably be expected to take an interest in a dilapidated house; there is an inclination to let everything and thus the nucleus of a sum is formed.

There are many areas in Bristol which are very congested. The dwellings in these areas are small, and the majority of them are quite worn out; it is hopeless attempting to repair them. The only thing that can be done is to close and demolish them, or to prune liberally, thus providing more air-space and room for alterations and repairs to those allowed to remain. A very gratifying feature is the number of owners who visit Dr. Davies' office for advice as to repairs and the insertion of damp proof source. Davies' office for advice as to repairs and the insertion of damp-proof courses, thus proving have appointed Mr. J. Blakley as town surthat the work done under the Housing Acts veyor in place of the late Mr. W. Wilson.

is primarily of an educational character. No houses to let at 5s, 6d, or under per week have been built in Bristol during the years 1911, 1912, 1913, and 1914. The congestion is becoming very acute. During the year 3,875 houses were inspected, or which 2,903 were found defective, 1,455 were made habitable, and 508 were represented as unfit. summary of the work done under the Housing Act, 1909, up to the end of 1914 shows that total number of houses inspected was 6,832, of which 5,180 were found defective, was necessary. Of the remaining 4.662, 271 were closed under order, 405 closed voluntarily, 3.046 were made habitable, and 940 were in hand.

## MATHEW BOULTON'S HOUSE AT SOHO.

In the course of an address to the Birmingham Architectural Association the other evening on " Architecture in Birmingham and the Neighbourhood in the Last Half of the Eighteenth Century," Mr. Arthur T. Bolton, F.R.I.B.A., of London, suggested that the house of Mathew Boulton at Soho should be preserved as a memorial to the man who was one of the makers of Birmingham. Whether the interesting house at Soho was built in 1764, simultaneously with the factory, and perhaps from a design by Robert Adam, was a point, said Mr. Bolton, which, up to the present, he had been unable to ascertain. Smiles, in his life of Boulton and Watt, referred to a letter of 1770 from Boulton to Adam, which he hoped yet to trace, in which Boulton gave an account of his factory and the number of men employed. Unfortunately, that letter could not be traced, and the source from which Smiles appeared to be quoting was not known. Looking at the early date alleged for the house, and its selfevident architectural character, it seemed at least highly probable that it might have been based upon an Adam design. Adam visited Baskerville in Birmingham and Shenstone at Leasowes, and saw the new Hagley house in May, 1758. There was no doubt the Soho house was enlarged later, as there was a letter from Boulton to Watt dated August 20, 1789: The foundations of the new drawing and with-drawing room are began to be laid this day, the earth being dug out." That might be taken to refer to the wing on the one side of the house. There had been some controversy in connection with the idea that about the year 1791 photography was invented and first used at Soho. To establish that it had been sought to show that the house as seen now was recast at this period, and a new story added. It was traditional that Sheraton stayed with Boulton, and made the fine mahogany sideboards fitted in behind the columns. It became a great question, therefore, whether the 1764 house had not been It was traditional that Sheraton recast. Looking at it all round, the apparent unity of the design, which at first sight appeared in favour of the first period of 1764, gave place to doubts arising from unex-plained features of the planning and con-struction. He was inclined to think the balance of evidence was in favour of the design being by Wyatt rather than by Adam, and what was seen now must be regarded as a reconstruction subsequent to 1770, and possibly contemporaneous with the design of the facade of the Birmingham Theatre which was given by Wyatt in 1780. In concluding his sketch of Boulton's career the lecturer said his life deserved to be honoured and commemorated. No city could afford to live merely in the present, ignoring the salutary influence of its own past. It was to be hoped that the house of Mathew Boulton might yet escape destruction, and, reverently repaired, serve as a museum or library forming a centre of enlightenment and research. and an entirely suitable memorial of a great personality.

Mr. Bolton showed a number of views of Hagley and Croome Court, as well as of Boulton's house at Soho.

THE BROCH DWELLINGS OF SCOT LAND.

A Munro lecture in anthropology and prehistoric archaeology was delivered on Thursday, in the History Class room of Edinburgh University, by Mr. George Macdonald, F.B.A., LL.D., upon "Scotland During the Roman Period." The lecturer death of the with particular death. The lecturer dealt first houses. The character of with native earth houses. these structures was explained and illustrated, the main facts as to their geographical situation indicated, and their possible pose discussed. A certain number of them had apparently been inhabited, at all events occasionally, but there were circumstances, notably their frequent occurrence in connec tion with but circles, which suggested that the majority had been storehouses. The objects found in them were few, but they included implements of iron, rotary querns, and fragments of Samian ware, which furnished clear evidence as to their date. were not peculiarly Scottish, for analogies could be cited, not only from elsewhere in Britain, but also from various parts of Europe and Asia.

The broch, on the other hand, was the most characteristic, as it was the most re-markable, monument of prehistoric Scotland. The total number of authentic examples recorded within the Scottish area was now not far short of five hundred, while not one was known outs de of it. Obviously this architectural type must have played a very important part in the civilisation which pro-Its true home was the region north duced it. of the Great Glen, including the various groups of outlying islands, although examples occurred sporadically as far south as Berwick shire and Selkirkshire, and three had recently been recognised in Galloway. Its Celtic been recognised in origin was indisputable, and every fresh excavation added to the cumulative testimony which assigned it to the Roman period. The contents of the broch of Torwoodlee, in Sel kirkshire, for instance, included Roman pot pointing to an occupation that could not be much later than 150 a.p. On the other hand, so southerly an example could hardly come very early in the series to which it is seeing that the type would require time to spread downwards from the north. This seemed to throw the oldest of the broch-back to a date well before the first Roman spread downwards advance into Caledonia.

Nor must it be assumed that the type sprang full-fledged from the brain of some prehistoric Scottish architect. Minor variations in design showed that, even after it had been definitely evolved, development continued to They might be certain that the broch itself was the outcome of a long process of evolution. When the Royal Commission on evolution. When the Royal Commission of Ancient Monuments had completed its survey, material for tracing that process would probably be available. Meanwhile, it seemed fairly certain that the galleried "duns" of Argyllshire and the islands represented the immediately preceding stage. The crannogs of Scotland, with the scientific investigation of which Dr. Munro had been so prominently identified were another phase of the civilisa identified, were another phase of tion represented by the brochs. That is, they belonged to the early Iron Age, and were occupied during the Roman period, as well as possibly earlier and certainly later. The remarkable results of the recent excavations on Traprain Law were also referred to.

A large new consumptive sanatorium is to be built at Ryo Hill. Galway, from the design of Professor W. A. Scott, A.R.H.A., of Dublin and tenders for its erection are invited.

Captain Bernard Henry Holloway. 9th Sussex Regiment, of Burna Wood Granze Upper Tooting, Surrey, who was killed in France on September 27, aged 27, left property of the value of £10,540, with net personalty £9.050. Probate of the will, dated August 29 last, is granted to Henry Holloway, builder and contractor, father, and Roland Eveleigh Holloway and Herbert John builder and contractor, father than the builders and Herbert John Holloway, builders and contractors, brothers. The testator gives his shares in Holloways Properties, Limited, to his father and investments he had made in the War Loan to Misself Develop Characle. Louisa Douglas Chample.

### COMPETITIONS.

DUBLIX The Cleansing Committee of the Dublin Corporation recently advertised tor competitive designs for the laying out of the reclaimed slobland at Fairview as a public park. With the approval of the Municipal Council, premiums were offered of £50, £10, and £5 respectively for the first. were offered of £50, £10, and £5 respectively for the first, second, and third designs selected. The designs have been placed as follows: First, Messrs, William Power and Co., landscape gardeners, King Street, Waterford; second, Mr. Horace T. O'Rourke, Lytlehome, Cabra Road, Dublin; and third, Miss Henrietta C. Take, 8, Upper Fitzwilliam Street, Dublin. The assessors were Sir Frederick Moore, curator of the Botanic Gardens at Dublin, and M. C. J. MucCarthy, the city architect, Yne competiters sent in designs, -

# PROFESSIONAL AND TRADE

SOCIETIES.
NORTHERN ARCHITECTURAL ASSO (IATION —This association held its opening meeting of the session on Wednesday night at 6. Higham Place. Newcastle-on Tyne. The president. Mr. R. Burns Dick, F.R.L.B.A.. presided over a very good attendance.—In his address, the president said that and other societies throughout the Empire mourued the death in battle of some of their most promis ing and talented members, whilst thousands of architects and students of their art had taken up arms. After urging the need for national service, he indicated what might be the effect upon the construction of cities by the greater development of aircraft. Among the possible changes, he thought, would be a gradual increase in the proportion of open spaces; the general introduction of underground or double-decked roadways; tiled and sloping roots entirely abandoned in favour of very strong flat roofs, specially adapted for anti-aircraft appliances; picture galleries with suspended wall linings, on which the pictures would be fixed, and which could be swiftly dropped to their safety vaults below; museums with their cases of treasure, statuary, etc., arranged on continuous lift platform capable of being lowered by the pressing of a button; and schools and similar buildings so modified as to make them numediately avail buildings so able for the accommodation of the citizen-inarms at the signal of alarm. He could also imagine a network of subways linking up important centres, and permanently contracted and well-equipped trenches protecting the great industrial centres, and great electric generating stations entirely underground.

THE SHROPSHIRE CRADLE OF THE ROYAL STUARTS. The Rev. Professor Conjer. D.D., delivered a feeture, under the ruspices of the Scottish Ecclesiological Society, in St. Cuthbert's Lower Hall, King's Stables Road, Edinburgh, on "The Shropshite Cradle of the Royal Strarts." Bishop to the Royal Strarts of the Royal Strarts of the Royal Strarts. Campbell, Glasgow, occupied the chair tor the first time as president of the society. Professor Cooper said that, whatever might have been the remoter origin of the Royal Stunts and, as a matter of fact, they came from Brittany, where they had held the postton of stewards to the Bishops of Dor—it was in Shropshire that they laid the foundation of their fortunes on the soil of Great Parts. They was in the soil of Great Parts. Butain. They came over, not with the Conqueror, but with the ablest of his sons; they took root in Shropshire on the fall of the Norman Earls of Montgomery. In Shrop Norman Earls of Montgomery, In Shrop-shire were born to Henry's follower, Alan Etz Fland, the two sons William and Walter, Place descendants were to rise to such high d stinction From William Fitz Alan sprang of shiretion—From William Fitz Alan spraing to F tz Alan Howards. Dukes of Norfolk; from Walter the Royal Smarts. Both Wi iam and Walter showed their gratifude to Henry I by adhering to the cause of his daughter Mand against the usurping Stephen; ind it was this loyalty to the legitimate the ress that recommended Walter—the conservation of David 1. Section and led him to accompany that monarch to the north, where he was speedily appointed to the office which gave his descenappointed to the omee which gave his descendants their historic surname; and, receiving bands in Rentrewshire, became the founder of Paisley Abbey. Walter, the Steward, left England in early life Letore he had much to

give to the Church, but his father, Alan, was a conspicuous benefactor to the Abbey of Shrewsbury; his brother William was the founder of that of Haughmond; and to his sister-in-kaw, the rich wife of William, the great Priory of Wenlock was deeply indebted. For this priory Walter had a deep veneration, and when he was about to found Paisley he stipulated that its first inmates should come from Weulock, and associated the patron saint of that house, St. Milburgh, with St. James, and the local St. Mirren, as patrons of the new monastery. Naturally, monks from Wenlock would try to build at Paisley on the lines of the home which they had left and he had found among the carved and moulded ston's collected in the old cloister-garth at Wenlock several bearing distinct witness to the former existence there of cloister-areade very similar to that which Mr. cloister-areade very similar to that which and P. MacGregor Chalmers, acting on the evi-dence supplied by capitals and bases dug up at Patsley, had just reproduced in his beautiful restoration of that abbey. The lecture was illustrated with a series of views of the Shropshire churches and abbeys referred to by the lecturer.

THE THREATENED DEMOLITION OF GLASGOW TOLBOOTH STEEPLE. The proposed removal of the Tolbooth Steeple of Glasgow to a new site was referred to at the annual meeting on Thursday night of the Glasgow Archaeological Society. Mr. J. T. T. Brown presided. The council, in J. T. T. Brown presided. their report, stated that they had renewed the protest the Society made two years ago, when it was then proposed by the Town Council to remove the steeple. The President remarked that, notwithstanding all the protests they had received, the Town Council had gone on as if nothing had happened, and had decided that the steeple should be removed. Mr. Edwards moved that the Society promote a memorial to the Ancient Monuments Board, asking that body to move for a preservation order under the Ancient Monuments Protection Acts for the retention of the steeple on its present site, and that other local bodies be invited to support the Professor Cooper seconded the motion. motion, which was adopted.

TOWN PLANNING AFTER THE WAR. — The first national conference of housing societies and societies of public utility was held on Friday in London, under the auspices of the Garden Cities and Town Planning Association with the abject of practility for housing tion, with the object of providing for housing on town planning lines after the war. Mr. Cecil Harmsworth, M.P., presided, and representatives of sixty-one societies from all parts of England, Scotland, and Wales were represented. The questions discussed included the relations of housing societies to public money combines in the building industry, the co-operation between municipal to the co-operation of the co-operation of the co-operation of the co-operation between municipal control of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-operation of the co-op palities and public utility societies in future. and the amendment of the law to allow local authorities to invest in such societies. Stress was laid on the high price of money and material, and eventually it was agreed that the best time for taking action would be "so soon as the end of the war could be seen approaching". approaching." A committee was formed representing the whole of the groups interested in the scheme.

have been applied to the Baptist Schools, The Green, Twickenham.

Messrs F McNeill and Co., Limited, of Spencer House, 4, South Pluce, E.C., point out that they were the original patentees and manufacturers of asphalted roofing in the year 1833, and not only supplied practically the whole of the roofing felt required for the luts and hospitals of the British Army during the Crimean War, but supplied and applied the asphalte roofing felt on the whole of the military canns in this country at the time of the asphalte roofing felt on the whole of the military cannys in this country at the time of the Crimean War viz. Aldershot, Colchester, Shorneliffe, and Curragh, Co. Kildare, Some of these contracts were held for over fifty years, and during the present war McNeill's roofing felts have been simplied in very large quantities not only for the roofing of the luts in this country, but for export to the various bases alread abroad

# Om Office Table,

An inquiry has been held in the Merchants Hall, Glasgow, regarding an application by the District Committee of the Middle Ward of Lanarkshire for authority to prepare a town planning scheme for the Newton, Carmyle, and Baillieston area of the county. Mr. David Ronald, the commissioner appointed by the Local Government Board for Scotland, presided, Mr. W. E. Whyte, clerk of the committee, appeared for the applicants, while representatives were present on behalf of the representatives were present on behan of the Glasgow Town Council and landowners, who behad objections to the scheme. Mr. W. R. Young, the engineer, gave a detailed description of the area which it is proposed to deal with. He pointed out that a similar scheme was contemplated for the Cambuslang area, and that it was intended that the two schemes should be inter-related. Care would be taken to foster the proper development of the area and its mineral operations. It was in the interest of the local authority to see that the area was developed, and there was no disposition on their part to hamper the mineral industry. Dr. John F. Wilson, County Medical Officer, said that it was an area which had developed very considerably, and could be easily governed by a town-plaining scheme. The inquiry was concluded.

Under the title of "Expert Juggling," the Contract Record of Toronto publishes the following remarkable statement as to tendering tractices in Winnipeg:—"Investigation into the construction of the Law Courts and Cen-tral Power Station at Winnipeg reveals the fact that seven tenders for the were received on June 12, 1912. The three lowest were the National Construction Company at \$763,974. Thomas Kelly and Sons at pany at \$700,974. thomas Kerly and Company at \$887,500, and C. H. Simpson and Company at \$299,107. The National Construction Company, of which C. H. Simpson was president. were offered the contract, but they refused to sign, stating there had been an error in their tender. The Kelly firm were then offered the contract, but they replied that they had just received a large cut-stone job and could not undertake another contract in volving a large quantity of out stone. C. H. Simpson and Company then signed a contract with the Manitoba Government at \$890.107 On August 14 they sub-let the entire work by contract to the National Construction Com-pany at \$854,107. The National Construction Company later gave Thomas Kelly and Sons sub-contract for stone work in the building.

The annual report of the city engineer for Sheffield, Mr. Charles F. Wike, for the year ended March 25 last, has just been published, and states that on November 16, 1914, fifty years had been completed during which the by-laws relating to new buildings and streets had been in operation. During these fifty years, 57,904 houses were erected, being at the rate of 1,158 houses per twelve months: the greatest numbers were built in 1899 and 1990, 2,710 and 2.876 respectively, and the least number in 1913, when the total fell to 542 Last year the length of new streets formed, of sewers constructed, and of plans submitted showed in each case a marked falling off as compared with the preceding year and previous ones. During the latter half if 1914 great activity took place in the con-struction of huge works buildings for war munitions purposes, and this was greatly increased during the early part of the present year. Extensive additions or alterations have taken place, the number of plans approved being eighty-five in the last six months of 1914, and 142 in the first six months of 1915. The new buildings approved during the year included the Town Hall extension, eight picture palaces, additions to Jessop Hospital, and a new children's hospital. The schena approved by the Local Government Board in 1905 for the extension of the city sewage works, at a cost of £270,369, was completed during the year, and well within the estimate, the actual expenditure being £262,634. works consist of catchpits, continuous-flow beds, which can also be operated as contact beds, the whole being capable of dealing with 65,000,000 gallons per day. The reconstruc-

tion of High Bridge at Owlerton, at an estimated cost of £7,000, forme by the Sheffield Corporation and the West Riding County Council, has been allowed to proceed The bridge, which is on the Penistone main road and crosses the R ver Don, will in future he 50 ft. wide, and built of brick and concrete faced with stone. Several important work, estimated to cost in all £85,654, have been cancelled er suspended until after the war. Since January 1, 1915, the work an connection with the building department has been under the control of Mr. E. A. Green: the improve-ment, town-planning, parks and estates department under Mr. E. Partington; and the sewage disposal works under Mr. J. Haworth.

The ordinary general meeting or the British Fralite Company (1908). Ltd., was held at 85, Gresham Street, London, E.C., yesterday. During the year which end-d June 30, 1915. a profit has been made of £3.800 13s. 11d., which, together with the balance brought for ward from the previous year, amounting ward from the previous year, amounting 5. £181–88. So, gives a sum standing to the credit of profit and loss of £3,982–28. 7d. The directors were unable to recommend the arrangement of a field of the first the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the field of the fie payment of a dividend for the following reasons:—The items of buildings, patents. plant, machinery, and goodwll were taken over from the old company at an arbitrary figure, and from a valuation which the directors have had made, it would appear affectors have had made, it would appear that they stind in the company's balance-sheet at a price for in excess of their time value. The Board have, from time to time, approached some of the largest shareholders 'an arrangement with a view to coming to for a reduction of the capital in order to bring these assets down to their actual value, and pending a con prehensive scheme dealing with the matter, no depreciation has been written off the plant, buildings, etc., taken over from the old compary. The directors feel that before any dividend can be paid either a reduction of capital ico.t take place or the items in question written down out of profits. They have accordingly set aside the sum of £2.000 out of the profits of the past year, in depreciating the item of plant and machinery, and have placed to reserve account the sum of £1.500, carrying lorward the sum of £482 2s. 7d.

A second edition of "The Magnet of first published in October last. Commerce, first published in vectorer in a sissued by the Great Central Railway Com-It graphically describes the enormous capacity of the great Midland coalfield with which the Great Central Railway Company is principally identified, with its estimated contents of forty-nine thousand million tons contents of forty-mine thousand minion fons of coal, the cheaper and more efficient transport of which the Great Central has done so much to facilitate by its completion of the great docks at limmingham. The volume is lavishly illustrated, and the statistics and general informa tion given are of the highest every industry. It is obtainable at the Great Central Railway Publicity Department, 215, Marylebone Road, N.W. importance to

Lieut, Col. Charles Rosenthul, A.P.I B.A. of Pitt Street, Sylney, N.S.W., commanding the 3rd Field Artillery Brigade, Australian Imperial Force, has been mentioned in dis patches for distinguished services in the field during operations at the Dardauelles, and has been appointed a C.B. ((Military Division). Temporary Captain Matthew Houan, Ser vice Battalion, South Lancashire Regiment, has been specially mentioned in Sir Ian Hamilton's dispatch of September 22 for services during the Dardanelles operations.

The council of the Institution of Municipal and County Engineers have appointed Messrs, E. J. Elford, T. W. A. Hayward, and C. F. Wike to confer with three representatives of the Society of Engineers to consider the question of drawing up rules and scale of fees for salaried engineers.

The death has occurred at Walsall of Mr. C. W. Steoliens, who was eventy-seven years of age. He fought under Sir Bartle Frere with the old 44th Foot Regiment during the war in the Far East in 1860. On retiring from the Army he was appointed borough sanitary inspector at Walsall, a post which he held for over

# EMERGENCY CANTEENS.

The provision for our soldiers of some of refreshment subsidiary to regulation rations, and accommodation for reading, writing, and recreation, is one of the problems of the war. The practical points needing solution are rapid organisation and building equipment. porary structure, wherein refreshments can be obtained and accommodation for recreative purpose, satisfies all demands. The several buildings heretofore crected for this purpose by charitably minded institutions are of the same temporary nature. For emergency hospitals wooden framing and galvanised iron coverings have chiefly been employed. The stractural details tural details are often of the simplest kind. We give in this article some examples of buildings erected by those institutions which have thrown them-

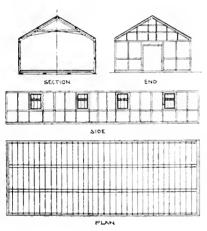

FIG. 1.

selves heartily into the work, and have erected many temporary hut-like buildings, with a large room as restaurant. another for recreative purposes, cards, games, etc., and occasionally special rooms for reading and writing. Of necessity such buildings, in planning, centre around a kitchen, or its virtual representative, where the meals, coffee. tea, etc., are prepared, a refreshment bar and room. For this, where possible, gas is employed; but naturally many regiments are quartered in outlying districts, and often in country towns and villages gas supply is not available. In the canteens built by the Salvation Army, under the immediate direction of Brigadier Rowe, good use is made of oil stoves, either of the blow-lamp or ordinary type. On the plans given the kitchens certainly bulk the fact that the dominant factor is the if, by good fortune, our present requirecooking apparatus. A stove and some-

thing in which to wash-up are the obvious ultimate elements in kitchen planning. The fundamental principle of cauteen

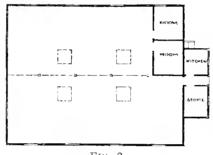

FIG. 2

arrangement is convenient service. The Salvation Army canteens are put in charge of a married couple, and so the rooms of a married couple, and so the reoms appearing in our sketch plans are for their accommodation. Necessarily, the refreshment takers wait upon themselves, so that the compact placing of the kitchen with respect to the bar and the best arrangement of bar across refreshmentroom are points to remember. And the plans, though so elementary, are useful just now when a wholesale provision of such buildings is wanted where munition and other war workers are engaged.

Where we are requested to plan some novel idea in architecture it is invaluable, however simple the requirements may be, to have before us the results of other brains. Handing to us the plans from which the accompanying sketches were made, Brigadier Rowe remarked that he "saw nothing in them"; but then every modest expert feels that his knowledge is more or less commonplace, and we know well that our soldiers have nothing but praise for what the Salvation Army has

As regards foundations, anything that, with economy of structure and expedition in erection, will satisfy the demands of reasonable stability is considered satisfac-

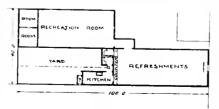

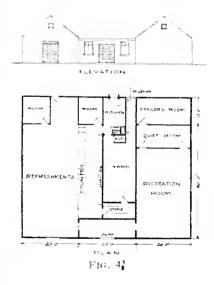

FIG. 3.

in sections, as 10 ft., and the idea is that if, by good fortune, our present requirements should cease, the huts would prove by side, as in Fig. 2. They are here ad-

useful for ordinary Salvation Army purposes. A general foundation consists of 9 m. by 3 in. plates, sanded and tarred, upon which as bed are constructed the temporary wooden posts and framing, quartering, etc. If necessary, short piers of brickwork are formed at suitable tances to hold up at a level the 9 in, by 3 in. bedplates, and also, if found necessary, concrete is put down under the brick piers. Quite the most elementary of the several emergency canteens are these buts. They are, we think, especially instructive on this account; for what we all, as architects, like to know under such circumstances is how far we can cut down and reduce recognised standard building practice.

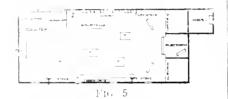

Fig. 1 shows the general arrangements made for construction, the three rows of

9 in. by 3 in. plates, so arranged as to take the place of the sleeper walls of ordinary building construction. The plan, therefore, is such that very light joisting is required. 4 in. by 2 in. being unnecessarily heavy in this case. The quarters are bedded on cills, which bear upon the 9 in, by 3 in, sole-plates, and, as the drawings indicate, are sectionalised in design. The quarters, 4 in. by 2 in. generally, are spaced conveniently for the receipt of galvanised iron enclosures, a head, as usual. being provided to the framing. A favourite arrangement is 6 in, by 2 in, for the rafters and collars shown. Light-framed windows are inserted, and the roofs covered by galvanised iron.

There is a refreshing, elemental sim-

Set it means more but the first (F.2.3) the site presents of the characters of the site presents of the control of the angle formed the control of the area arranged the kitchen of some and the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control

in additions. A useful yard is here each; as part if the site acquired. Entance is from the main road, at top of an There is all oby connecting the two idditions, and the counter at the junction of the two aid close to kitchen and store must be deemed a good and convenient disposition. The plan in Fig. 4 is on a rather ambitious scale, including a "quiet room, and efficers" room, and has a fine long counter, with good space and shelving at the back, the whole conjuctly grouped in one area of oo ft. by

Drainage is an evident problem. These hat canteens are connected up where possible to existing drains, as in Fig. 4, where an erdinary we is placed conveniently in the yard. Fig. 3 also includes we, and aramage as usual, but Fig. 2 is provided with earth closet, an arrangement that must often be necessary

.. cut pinz districts

In planning emergency einteens as in jaining other works, knewledge of retails gives a mastery in the conception of the winde. A study of hie with a canselon is nocessary to the architect engaged down new proposals. We give a sketch, Fig. 5, shewing roughly the airange thents inside a canteen. Among the verkers in this field is the Church Army. The sketch, shows a temp rary refreshmenter in for solders created in the Park, near the Murble Arch. The usists for shear the Murble Arch. Among the energetic workers in this field is the Y.M.C.A., which has built, and is building, many temporary canteens on a considerably more pretentious scale. Our rough diagram. Fig. 6, shows a temporary canteen erected by the society mear Waterloo Station. Beyond this building are sleeping accommodation. baths and lavatories. Some sixty or seventy beds, in two tiers, on the cabin model, are arranged in cubicles, and so successful has this dormitory accommoda tion proved that another 100 beds are immediately contemplated as an addition It must here be borne in mind that this particular building, at the London end of the South-Western Railway, is in a speci ally tayourable position for making sleep ing accommodation useful. The canteen arrangements comprise the large hall shown, entered by a porch. On the right is the refreshment bar, with counter and shelving. The Y.M.C.A. catering arrangements are on a considerably more extensive scale than in the case of other institutions whose buildings we have described. The kitchen in the Waterloo canteen comprises three powerful gas cooking stoves Naturally, the nature of the cooking apparatus greatly tells in the success of these buildings, and the several appliances need to be suited to the special duty. The hot and cold water arrangements are very complete. There is a cistern on an R.S.J. in in angle of the kitchen, and a hot-water cylinder in another angle. The sink and draining board are well planned, and a very necessary convenience-a large foodpreparation table—is included. The Y.M.C.A. provides substantial meals. Adjoining the kitchen is a small scullery. wherem vegetables may be prepared. Sanitary and lavatory accommodation is provided for those in attendance. In this case the working of the canteen is placed under the direction of a lady manager. who kindly explained to us the general arrangements. As the establishment is on a rather large scale, considerable

assistance is required, and this is a point met by voluntary lady helpers, who attend behind the bar.

We may mention, for the guidance of architects and others interested, that no makers of all constructional adjuncts are better able to co-operate in the building of canteens, huts, hospitals, and the like than Messrs, Haywards, Ltd., 187 to 201, Union Street, S.E., and certainly none have more generously offered to assist the authorities and others concerned to supidy at practically cost rates. In one or two instances within our knowledge we are surprised these offers have not been taken advantage of Messrs. Haywards, Ltd., have tendered for Admiralty and Army work, and they have carried out heating plants for Wellesley House, the Mobilisa tion Store, and the Soldiers' Institute at Allershot, with success and satisfaction,

reshing of these trage number of similar works are Mesrs. The diagonally of the positions Hill. Queen Victoria Street, E.C., who king and Queen, "have recently completed contracts at the signed "Francesco Bissolo," and we

Internment Camp, Stratford Hutments, Cambridge, and many other important Government buildings.

Messrs. Benham and Sons, Limited, of 66. Wigmore Street, W., have also done much work of the first class for the Admiralty and other departments, and large factories. A particularly well-appointed gas and steam kitchen for a staff of 1,200 which they have erected in London can be seen by appointment. They also specialise in cabinet hot closets and cupboards and in every form of heating and cooking apparatus, either by steam, gas, or coal.

Several inquirers will find their requirements in the way of kitchen and cooking apparatus, urns, coffee extractors, etc., heated by gas, steam, and electricity, well met by Messrs. Sumerling and Co., Ltd., 63. Bunhill Row, E.C., whose advertisement appears in this issue, and who will supply estimates and drawings free.

# PICTURES AND DECORATIVE FURNITURE AT THE BURLINGTON FINE ARTS CLUB.

A small but good and characteristically restful exhibition of pictures and decorative furniture at the Burlington Fine Arts Club is a welcome relief from present distractions. It will close about the end of February.

"The Virgin and Child" (1), a panel,

lent by Sir Francis B. Palmer, is attributed to Roger van der Weyden, of the Brabant school, c. 1400-1464. It may possibly be his, but is more likely a reproduction of the well-known repetition of the prototype in the Boston Museum, a well-known replica of which exists in the Gallery at Munich. Lord Lytton sends two panels, one. The Penitent Magdalen' (4), brought from a Peruvian convent, whither it had been conveyed by a party of Spanish Jesuits in the seventeenth century. It is stated to be a work by Fernando Gallegos, of the school of Castile, c. 1440---1507, but is evidently of later date, and more probably by the Flemish painter Jan Massys. The other, A Love Feast (5), also Flemish, is somewhat similar to Pieter Pourbus's picture in the Wallace collection. A good portrait of Colonel Francis James Scott (8), lent by Mrs. M. Trevelyan Martin, by Sir Henry Raeburn, was seen at the Burlington House Old Masters Exhibition in 1906 . The Concert " (13) is evidently a 1906 "The Concert" (15) is evidently a genuine canvas by Jan De Bray, c. 1627—1697. It is lent by Major-General Sir Coleridge Grove, K.C.B., and was formerly in the collection of Mr. Fiennes Dickinson at Syston Court. An "Heroic Landscape" (14), lent by Sir Frederick Cook, seems to have borne various titles. is ascribed to Francois Millet, 1642-1679. It was exhibited at Leeds in 1868 as Landscape, with Flight of Ahab," but no flight of Ahab is suggested, nor does there seem to be any flight of that monarch recorded. It is suggested in the catalogue that a more appropriate title might he The Destruction of the Cities of the Plain." Sir Henry Howorth lends a Virgin and Child" (15), probably by Plain. Galeazzo Campi, of the Cremona school. 1477-1536, and so signed, or rather Galeacius Campo.' There is a good deal about it after the style of Perugino, whose well-known altar piece of 1494 in the church of S. Agostino at Cremona was pretty well plagiarised by the painters of that city. "The Daughter of Herodias" (17), a panel lent by Mr. T. Humphry Ward, is said to be by Guiolamo Romano. c. 1485 - 1566. The Virgin and Child.

think genuine. It is lent by Mr. F. E. Sidney. "The Crucifixion" (20), lent by Mr. Herbert Cook, is by Cosimo Tura, c. 1430-1495. "Apollo Flaying Marsyas (22) is one of the many copies made by Teniers of an Italian picture in the Archduke Leopold William's collection at Brussels, of which Teniers was keeper; at any rate it is so included in the collection of engravings at Blenheim issued in 1660. It went with the rest in 1886 when the Duke of Marlborough sold his pictures, and is now owned by the Marquess of Clanricarde.

Among the furniture are a couple of very good long-case clocks, both of the seventeenth century. One is by Gaudron, of Paris, and is in a buhl case inlaid with a design of scrolls, amongst which are a morini and other figures, in white metal, the dial being supported by a figure of Time in ormolu. The other is English, by Jasper Taylor, of Gray's Inn. The case is of walnut with a domed hood, the whole front elaborately inlaid with a light-coloured wood in a geometrical design and floral scroll. A Northern French Credence cupboard of early sixteenth century date is of oak, the door carved with the Annunciation. A curious bureau lacquered in the Chinese style, acquired in Venice, shows strong Dutch influence. A couple of good mahogany barometers on either side of the alcove, one of Scotch and the other of London make, inspire the wish that present makers of these useful instruments could see their way to render them decorative. A good English carved oak settle of the first half of the seventeenth century is inlaid with holly and bog oak. The back is divided into six upright panels, with three oblong panels above, having carved borders and inlaid centres. Ön the front are four inlaid panels. There is also a desirable oak sideboard, the lower part five-sided with a splayed front and straight sides. The front is composed of six panels, three above and three below: two of the upper form cupboards and the two under them are drawers. The three chief panels are carved in relief with Renaissance ornament, consisting of figures, vases, dolphins, and arabesque foliage, the smaller panels having masks and foliage with interlaced cords. sides are decorated with interlaced ornament. The upper part has a raised tier enclosed by two sliding panels carved with interlaced strapwork. The back is an openwork screen of four panels, the uprights terminating with carved finials; the two lower panels are of Gothic tracery, and the two upper form a cresting carved with dolphins and fleur-de-lys surmounted by a band of twisted ribbons with beading. A few good chairs are also exhibited.

A few other works of art are to be seen. There is a good pair of majolica jars, with panels of St. Francis and St. John the Evangelist in landscapes on a yellow background, probably of Italian seven-teenth century work. A French thirteenth century of the Virgin and Child in carved oak was formerly painted and gilded. The Virgin, who is seated on a throne supported by four beasts—two lions and two griffins—holds the Christ with her left hand, His right hand raised in benediction. Her head is covered with a veil, which falls in stiff but not ungraceful folds on her shoulders, and is surmounted by a tall Gothic crown. Her robe reaches to just above her feet, and is partially covered by an ample mantle, the bordure of which, as well as the crown, has sunk spaces formerly filled with jewels. A pair of statuettes of Adam and Eve is carved in pearwood. In his left hand Adam holds a branch of the Tree of

Knowledge, his right arm held free from the side; his hair, which is thick and curly, falling over his shoulders. Eve holds a branch in her right hand, and with her left clasps an apple; her hair, which is wayy, falls over her shoulders as far as the warst. Both figures stand on rocky bases and have pedestals carved with grape vines. A quaint tambourin de Provence in straight-grained wood, probably walnut, is delicately carved in low relief with alternate waved and twisted lines divided by straight ones. These instruments were used by the criers in France to call the attention of the people in the same manner as the criers in England used bells. A flute and striker and a framed engraving of a crier with tambourin are shown with the instrument.

# ROYAL INSTITUTE OF BRITISH ARCHITECTS.

A business meeting of members of the Royal Institute of British Architects was held on Monday afternoon at 9. Conduit Street, W., the President, Mr. Ernest Newton, A.R.A. occupying the chair.

The following Fellows and Associates were

duly elected :-

As Fellows (12). John Gordon Allen (Asso As Fellows (12). John Gordon Allen (Associate 1910), 4, Tavistock Square, W.C.; 15, Holmdale Road, West Hampstead, N.W.; James Westbrook Farmer (Associate 1908), Cangallo 564, Buenos Aires, Argentina; Edgar Quiggin (Associate 1905), 67, Lord Street, Liverpool; Philip Appleby Robson (Associate 1897), St. Stephen's House, Victoria Embankarent, Westminster, S.W.; Rede Place, East Grinstead, tarether with the following License Grinstead; together with the following Licen tiates, who have passed the Examination qualifying for cand dature as Fellows:—Alfred Bar-ham Black, Gilbert Place, Adelaide; Stanley Street, North Adelaide; James Edwin Forbes 16, Old Square, Lincoln's Inn, W.C.: The Sheiling, Chalfont St. Giles: Willford Arthur Gagnon, 1,002 New Birks Building, Montreal. Canada; George Donaldson MacNiven, Local Government Brard for Scotland, 125, George Street, Edinburgh; 13, Cluny Drive, Edin-burgh; Charles Bulman Pearson, 18, Dalton Square, Lancaster; John Duncan Tate, 16, Old Square, Lincoln's Inn. W.C.: Lexden, Oval Way, Gerrard's Cross; Charles Clayton Thompson, The Market Place, Derby: 32, St. John Street, Lichfield; George Wittet, J.P. Public Works Secretariat, Bombay; Byculla Club, Bombay.

As Associates (23).—Percy Joyce Adams, Fairmead, Woodside Road, Woodford, Essex; Harry Andrew, 56. Whitefriargate, Hull; co Messrs. Lowther and Rigby, 77. Lowgate, Messrs. Lowther and Righy, 77, Lowgate, Hull; Pherozshah Fardoonji Balsara, Solakoti Building, Grant Road, Bombay; James Bennett, co Messrs. John Burnet and Son, 259, St. Vincent Street, Glasgow; Hillview, Saline. St. Vincent Street, Glasgow; Hillview, Saline, Fife; Reginald Bruce, P.A.S.I., 21, Holdenburst Avenue, North Finchley, N.; Edgar Gooding Catchpole, 46, Christchurch Street, Ipswich; Town Hall, Ipswich; Alexander MacLauchlan Duncan, Raboy, Lenzie, Dumbartonshire; c.o. R. J. Walker, 108, Douglas Street, Classon, Frie Conversion Franci, 11 Street, Glasgow: Eric Carwardine Francis, 14, St. Andrew's Mansions, Dorset Street, W.; St. Tewdric, near Chepstow: John Henry Horniman, c.o Messrs, Stevens and Gregson, 32, Victoria Street, S.W.; 68, Bolingbroke Grove, Wandsworth Common, S.W.; Sidney Harold Loweth, 67, Downs Park Road, Hackney Downs, N.: Trafalgar House, Trafalgar Square, S.W.: Cyril Hawthorn Mitchell, Wel lington, N.Z.; 8. Mecklenburgh Street, W.C. Ernest Paul Brander Musman, B.A.Lond., Ernest Paul Brander Musman, B.A. Lond., 27, Upper Phillimore Place, Kensington, W.; H.M. Office of Works, Storey's Gate, Westminster, S.W.; Charles Edwin Nichols, Rectory Farm, Eckington, Sheffield; Chesterfield; Charles Lancashire Pace, 28, St. George's Street, Primrose Hill, N.W.; H.M. Office of Works, Storey's Gate, Westminster, S.W.; Thomas Reive, Glencairn, Errwood Road, Levenshulme, Manchester; co Messrs, Bradshaw, Gass and Hope, 19, Silverwell Street, Bolton; Manning Durdin Robertson, 50, Nor-Bolton; Manning Durdin Robertson, 50, Nortolk Square, W.; Alfred Douglas Robinson, 45, Bishopsgate, E.C.; The Abbey, Thorpe-le-Soken, Essex; Harvey Robert Sayer, 3, Havelock Road, West Marlands, Southampton; 45, Choumert Road, Peckham, S.E.; Albert Isaac Choumert Road, Peckham, S.E.; Albert Isaac Turner, 65, Wilmington Gardens, New Bark-ing Essex; Harold Frederick Walker, 13, New Street, Dorset Square, N.W.; 19, Queen Anne's Gate, Westminster, S.W.; Enoch Wil-liams, "Norton," 50, Canada Road, Cardiff; Glamorgan County Council, Cardiff; Reginald Sharman Wilshere, 10, Trinity Road, Chelmsford; Architects' Department, Essex County Council, Chelmsford; William Cecil Young, 19, King's Drive, Heaton Moor, near Stockport; co Mr. Isaac Taylor, 17, St. Ann's Square, Manchester.

The following motion in the agenda for the alteration of the Regulations for Architectural Competitions, as printed in the Kalendar, was not proceeded with, owing to the absence of the quorum of members required under

By-Law 67:-

1. The second paragraph to read: "Members of the Royal Institute of British Architects and of its allied societies are only permitted to take part in competitions in accordance with these regulations, which are intended to apply to all competitions other than private competitions instituted by private individuals or firms."

2. The footnote at the bottom of the first

page to be omitted.

### NEW APPARATUS FOR DETERMINING FINENESS OF CEMENT.

Three years' experiments, intended to produce a means of determining the exact fineness of cement, have resulted, at the United States Bureau of Standards, in the developing of an apparatus which is effective for this purpose. In the manufacture of Portland cement, clay or shale and limestone are ground together and "burned" in rotary kilns. The cement comes from the kilns in the form of hard, black, semivitreous lumps, or "clinker." When pulverised, this clinker becomes a greyish powder, which is the familiar article of commerce employed for a great variety of purposes in practically every type of building construction

It has long been known that the fineness to which the cement is ground is one of its most important characteristics, and consequently specifications require that 75 per cent. commercial coment shall i moie of through a No. 200 sieve, which has 40,000 openings per square inch. This is the practical limit of mechanical sieves in respect to fineness.

It is very important to have some means of measuring directly the entire state of subdivision of cement; in other words, to discover just what percentage of the material is made up of particles of certain definite sizes. If such a division can be made, it should be possible not only to compare the efficiency of different grinders, but also to determine what degree of fineness must be attained before the cement becomes "hydraulically active that is, capable of combining with water to form the binding material in mortar and con-

The apparatus devised by the Bureau of Standards consists of a vertical brass pipe about 3 in. in diameter and 5 ft. long, at lower end of which is attached a glass bulb, in which the cement to be tested is placed. Air at constant pressure is blown into the cement through a glass tube or nozzle in the side of the bulb, and as the air can escape only through the vertical stack, it carries with it the cement dust, which is caught in a flannel hood surmounting the stack. air-flow in the stack is very uniform, and in a short time all the dust will be removed from the cement, leaving a granular residue in the glass bulb. This residue is weighed, and the amount of dust is determined by subtracting the weight of the residue from that of the original sample of cement. Different grades are obtained by using different-sized nozzles, and thus a number of separations can be made in the very fine portion of the cement. With the aid of the microscope the cement. With the aid of the microscope the size of the largest particles in any given separation can be readily determined, and in this manner the apparatus is standardised without reference to the size of the nozzles and other parts of the apparatus or the airpressure used.

purposes of this Act be deemed to be divisible at the amount of the loan to be apportioned between the property to which this Act appries and the other property in proportion to the respective ratefuld values thereof.

Standard rent "and "standard rate of interest "are defined as the amounts paid on August 5, 1914; in the case of subsequent letting the rent at which it was first let, and at later mortgages the original rate of interest. t later mortgages the original rate of interest. Rateable value "similarly is held to mean

Ratcable value similarly is held to mean that of August 3, 1914, or, in the case of a house assessed since that date, the value at which it was first assessed. The Bill does not apply to houses of a rateable value exceeding £40, but shall apply to any house or part of a house let as a separate dwelling where the rent does not exceed £50 in the Administrative County of London, and £21 elsewhere. There is a provision also that if any house be sub-let by the tenant the Bill shall continue to be operative.

# WAR WORKERS' AMENDMENTS.

The Workers' War Emergency Committee, at a conterence held at Cardiff on Saturday, unautmonsly adopted amendments drafted as to make the Bill applicable to the whole country, without the slow process of Orders in Council to particular centres.

TIVERPOOL PROPERTY OWNERS' SIX POINTS

The Liverpool and District Property Owners and Ratepayers Association have communicated with the local members of Parliament regarding the Rents and Mortgage Interest Bill, and have submitted the follow ing six points which, they state, should re ceive the attention of the House of Commons before the Bill becomes law:—(1) A definition of the £30 and £21 rentals is required. We suggest the gross assessment for income tax. Where, by Acts of Parliament, areas were absorbed in adjoining boroughs and the rates stereotyped for a period of years, which areas have recently fallen or are about to fall under the older and higher rates of the absorbing borough, powers should be given to property owners in such areas to raise rents accordingly. (3) What are pre-war rents? We suggest they should be the highest rent obtained within a period of ten years previous to August 4, 1914. (4) We consider that if there are to be pre-war rentals there ought to be pre war assessments, and poor law and district authorities should immediately reduce assessments accordingly. (5) The Act to apply equally to mortgages created before or after the Act. (6) We suggest that the promised restriction on toreclosure be sufficient protection against the memoring of costs which mortgagors always have to pay,

# THE ARCHITECTURE OF ANCIENT EGYPT.\*

->-

This volume, which reaches us rather late, we are told, an attempt to trace for the nicemation of unlearned or general readers the architectural tradition from its remote of 20 to the time when it generally became recognised as part of Roman civilisation. From k'y, we do not see that the excellent pur-pose which has inspired its author is much advanced, but as an effort to bring together not go to sted and historical form a certain amount of recent information, at present dispers d in other books and papers, it deserves and will doubtless obtain, recognition. The appending will be mainly interested; and others will welcome the translation given as at append to the paper by Lepsias, which was published in 1872, out of date as it is in view of the rescent discoveries. The illustrations are numerous but many are horrowed, and | tame ar to our coun readers.

The Architecture of Ancient Egypt. By Edward Br., M.A., F.S.A. London: G. Bell and Sons, Ltő,  $\mathfrak{g}_{(s)}$ 

PRELIMINARY TRAINING FOR

RECRUITS. Section "B." Arm Section "B." Army Reserve. The 4th Battalion Central London Volunteer Regiment (Architects' Corps) has offered through the Central Association of Volunteer Training Corps to train 500 recruits placed in the Army Reserve under Lord Derby's scheme. The offer has been approved by the War Office, and recruits can now commence their instruction at the Corps Headquarters, Chester House, Eccleston Place, close to Vic toria Stution.

A large drill hall, common room, canteen,

sergeants' mess, and lecture room are available, and instruction will be given by fully qualified N C.O.'s under the direction of the Corps officers, many of whom are old Terri-torial officers and N.C.O.'s of long experience, thoroughly equipped for the accomplishment of the task they have so patriotically under-

Recruits should present themselves at the Corps headquarters any evening between 6 and 9 p.m., when they will be formed into special squads for instruction under the conpany sergeant-major. Drill hours will be from 6.15 to 7.15 and 7.15 to 8.15 p.m., and on Drill Saturday afternoon. Instruction will be given in squad Irill, physical drill, musketry, bayonet fighting, signalling, and practical expersence can be gained in trench digging an:

Special squads can be formed composed or friends or one obers of firms joining together.

No entrance fee or subscription will b

charged, the only stipulation made is that recroits must regularly attend parades in order that training may be progressive and thorough.

This corps has already sent over 120 mem this coaps has already sent over 120 members to the Army, many with commissions in the Engineers and technical branches, and in conjunction with the Architects' War Service Bureau has recruited over 1,000 men direct into His Majesty's Forces.

THE GROWTH OF LONDON

An analysis of the census figures of 1911 relating to London has been made by the Clerk to the London County Council. The population of London reached its maximum in 1901 or 1905 and began to increase again between 1910 and 1911. There is still room for expansion in Wandsworth. Lowisham, Woodwich, and Hammersmith particularly, and in a less degree in Camberwell, Lambeth, Fulham, and Hampstead and Hackney. arrest in the growth of the population of London which has been disclosed by the 1911 census must not be confused with a condition of stagnation or sterility. The population of London is continually increasing, as is disclosed by the excess of births over deaths. The nominal decrease is merely the outcome of the growing inadequacy of the county boundary to represent the limits of what is popularly known as London. The City of London, Holborn, and Westminster actually showed a smaller population in 1911 than in 1801, 110 years before, the City being at its max mum a century and a decade and Holborn in 1851. Westminster ago, and Holborn in 1851. Westminster reached the maximum in 1861, with 260,000 and then its population fell as steadily as it rose until 1911, when it stood at exactly the same figure (160,000) as in 1801. Finsbury, same figure (160,000) as in 1801. Finsbury, Holborn, Maryleboae, and Shoreditch seem to be pursuing much the same course. The average density of population in London (60 per acre) is eight times as great as that in extra London (7.4). In Southwark (170), Shoreditch (169), Bethual Green (160), and Stepney (159, it is the highest, and the lowest in Woodwich (15). Hampstead and Wanderouth within 30 and 31 regions per lowest in Woolwich (15), Hampstead and Wandsworth giving 38 and 34 persons per acre. In extra London West Ham tops the table with 61.7, and Greenford figures at the bottom with .5. Some interesting figures are given with regard to the population occupying dwellings of various types. Of the total London population 75.5 per cent. was housed in ordinary dwelling-houses; 10.4 per cent. in fluts (including maisonettes); per cent. in flats (including maisonettes); 7.2 ner cent. in shops; and 5.8 per cent. in in-titutions; the percentages in other types of buildings being small. The 478.024 ordinary dwelling houses contained 305.967 separate occupiers, or an average of 1.69 per house.

# Our Illustrations.

STMINSTER R.C. CATHEDRAL: CHAPEL OF ST ANDREW AND WESTMINSTER THE SAINTS OF SCOTLAND.

The decoration of this chapel has now been completed, the curtains which have shut it off from the church for the last two years were yesterday removed, and solemn High Mass was celebrated in it vesterday Science Mass was celebrated in it yesterday—St. Andrew's Day. The Marquis of Bute, who had generously offered to bear the whole expense of the work, nominated as architect, with the consent of the cathedral authorities, Mr. Robert Schultz Weir, who, as is well known, has made a special study of Byzantine art. He has not only designed the whole

towards the aisle. The altar, which is constructed of Scottish granite, is raised on three steps, and is placed under a baldachino supported on pillars and pillasters of Verde Antico with bronze capitals and bases. The wall behind the altar has an inlaid cross of ancient Egyptian porphyry on which is placed a beaten copper figure of Our Lord. On either side are panels in low relief representing four of the principal Scottish saints; Ninian, Margaret, Bride and Columba. On the south side are two pairs of windows glazed with "crystal white" glass in leaded patterns, with the white cross of St. Andrew on a blue ground (azure, a saltire argent) in-Between the windows are two

faces of the east and west arches. The plain gold mosaic is executed in fan-shaped forms, which may be taken to signify golden clouds screening Paradise from earthly view. A row of seven inlaid chony stills fill in the recess of the west end of the chapel. The altar candlesticks and the reliquary, set into a niche at the base of the cross over the altar, are in bronze and enamel. Altar-cards have been specially engrossed and illuminated on vellum for the chapel. The marble work has been executed by the firm of Messrs. Farmer and Brindley, the metal screen by Mr. W. B. Reynolds, and the glazing by Messrs. Lowndes and Drury. Mr. Stirling Lee is responsible for the scalpture, Mr. Ernest detached pillars of Cippolino with carved detached supporting the arches over. In the tympana under these arches are low-relief figures of the archangels Gabriel and Michael. Ginson for the stalls, Mr. Harold Stabler for the reliquory and candlesticks, and Mr. Graily Hewitt for the altar-cards. The full-

LORD DIGBY'S SCHOOL, SHERBORNE, DORSET: FIRST AND GROUND FLOOR PLANS Mr. EDWARD C. H. MAIDMAN, Lie, R.I.B.A., Architect.

of the work, but has given his constant personal attention to the carrying out of his scheme, and in this he has been ably aided by the craftsmen whom he gathered round him to execute the various portions. The drawings which we illustrate show generally the designs for the east and west walls, but it is impossible to judge of the harmony of composition and colouring from a monotone reproduction. As the chapel is now accessible this can be best seen by a personal visit to the cathedral. Tall open-work screens of white metal separate the chapel from the south aisle. The pavement is of various coloured marbles and carries on the various coloured marbles and carries on the old tradition of a "pavement like the sea." The lower part of the walls is lined with marble; tall slabs of blue Hymettian below and panels of old Cippolino and Skyros above. Long, thin pilasters of porphyrycoloured Rosso Antico terminate the work

vaults of the roof are covered with mosaics, the designs of which deal with the subject of St. Andrew. On the west wall is a large-sized figure of the Saint in the attitude of prayer, apostrophising the cross on which he suffered martyrdom, and which is repre-sented on the opposite wall. On either side of the Saint are animals and trees, and on either side of the cross, representations of banners bearing in Latin and in English the text of the Saint's prayer or salutation to the cross. This comes in the "Office" for St. Andrew's Day in the Roman Breviary. The English translation is the one made by the late Marquis of Bute. On the lower parts of the vaults are views of cities connected with the story of the Saint, and this story is briefly told on the upper part of the west wall. Appropriate borders of a Celtic type frame the pictures and appear at the

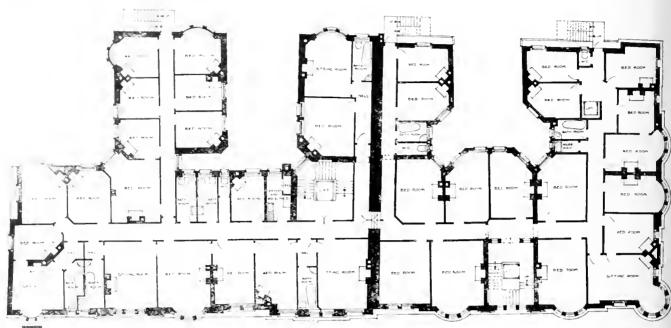

The upper part of the end walls and the by Mr. George Jack, and the mosaic work carried out by Mr. Debenham's group of mosaic workers, under the personal direction of Mr. Gaetano Meo, the friend and assistant of Rossetti, Burne-Jones, Richmond, and other artists. To his intimate knowledge of the selection and disposition of the material is due the most excellent effects of colour and texture which have been obtained in the work. With the exception of one Italian, who helped with the mosaics for a time, all the workmen employed were British. Round the upper part of the blue slabs forming the high dado have been incised the names Scottish saints arranged in chronological οĹ order according to centuries, thus emphasising the full dedication of the chapel, which is to "St. Andrew and the Saints of Scotland." The drawings now reproduced were shown at the Royal Academy this

the rearrance indicated by the being repeated, and a large tower with a dome is introduced as a central feature of the dining-room are panelled to the rearrance of the complete front to Bayswater Road. The front is faced with buff terracotta and red pressed bricks. The main entrance and staircase are located in the centre, and the several floors of the "Adam" Lounge is in fine-resisting doors of oak glazed with Luxfer glazing. The accommodation consists of 128 plaster, with coupled Ionic pilasters. glazing. The accommodation consists of 128

walls of the dining-room are panelled with Austrian oak, fumed and dull polished, the same material being used to case the steel columns as fluted Ionic columns. The decora-tion of the "Adam" Lounge is in fibrous plaster, with silk filling to the wall panels. The hall and staircase are paved with Sicilian marble, and the walls panelled in fibrous plaster, with coupled Ionic pilasters, dado,

etc. The building is heated by adopting an accelerated low pressure hot water scheme. A system of vacuum cleaning by hydraulic power is installed. Each room is provided with its own telephone. The general contractors for the work were Messrs, Perry and Co. (Bow), Ltd., and the building, steelwork, and decorations were carried out from the designs of Mr. Delissa Joseph, of 75, Basinghall Street, E.C., who was also the architect for the old portion. The heating and ventilation was carried out by Messrs. Burroughes and Sons, the constructional steelwork by Messrs. Redpath Brown and Co., the ornamental ironwork by Messrs, W. T. Allen and Co., the electric lifts and vacuum cleaning installation by Messrs. Waygood Otis, Ltd., the marble and mosaic and tile work by Messrs, Fenning, and the fibrons plaster by Mr. W. F. Robinson. The terracotta was supplied by Mr. J. C. Edwards, of Ruabon.

UNIVERSAL HOUSE, OXFORD ST., When the design of the front of this building

In the design of the front of this building the two main objects aimed at were the ad mission of the maximum amount of light, and generally a massive and dignified effect, which been obtained by the employment of simple Ionic columns on the second and third lloors, with a heavy cornice and entablature, and the Poric order on the fourth and fifth floors, and the deeply-recessed windows. two-storied iron window frames, with rather rich detail, form an important feature of the design. The basement and ground floors are occupied as shop premises, the first and upper floors being occupied by the Transatlantic Film Co., who have set the first floor apart as a private cinema for the exhibition of their a private cinema for the exhibition of their films. The building was carried out from the designs of Mr. Delissa Joseph; the general contractors were Messrs. Ford and Walton, Ltd., the electric lift by Messrs. Waygood-Otis, Ltd., the constructional steelwork by Messrs. Redpath Brown and Co., the iron by Messrs. window frames and casements by Messrs, W Allen and Co., the marble and nosaic by Messrs. Fenning, the carving by Mr. W. F. Robinson, and the heating by Messrs. Burroughes and Sons. The drawing here given was shown at the Royal Academy this year.

# BRIDLINGTON PRIORY CHURCH: THE NORTH PORCH.

The nave is the only portion of this church still standing, and this portion alone represents now the once-magnificent monastic church, which is a most imposing and beautiful example of English architecture. In its entirety the church consisted of nave, chancel, transepts, large square central tower and two western towers, though these were originally not completed. The most of the completed of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete of the complete o originally not completed. The western front is profusely decorated, and is an exquisite specimen of the florid Perpendicular English style of architecture. The lower part of the north-western tower, with the north and south sides of the church, belong to the semi-Norman and Early English periods. The north porch is a splendid specimen of the The foliage of the ornamental mould ings of the great western door is marvellously elegant, and rich with oak leaves and acorns. All the clerestory windows on the north and south sides are early specimens of Geometrical tracery, except the three most westerly on the south side, which are insertions of the Perpendicular style. Though only a fragment of the larger edifice, it is still remarkable for its great size, and is one of the finest of our parish churches. Mr. Gordon finest of our parish churches. Mr. Gordon Hemm has kindly placed his excellent measured drawings at our disposal, and we give to-day the smaller sheet of the beautiful north porch. Double pages of the nave elevations and sections will follow at an early date.

### OLD ENGLISH LIVING-RÖÖM FURNITURE.

Some of these pieces would look in place in almost any homely room, though they differ in many ways. Most historic furniture has essentially this adaptable quality, because it was for the greater part designed for use rather than mere display, and so possesses a human standard fit to to be lived with and used anywhere for everyday purposes. The individual choice decided on for preparing

this sheet of sketches was arrived at primarily, however, to justify the title em-The table, dresser, cabinet and chair, etc., are particularly suitable for a living-room where daily meals are taken. The word dining-room, or salle-a-manger, implies at least an occasional formal entertainment, and specially so abroad, in contradistinction to the ordinary routine en famille. In the more or less pretentions houses of the fairly wellto-do daily meals are relegated not incommonly to the so-called breakfast-room, answering, consequently, to the living-room, heretofore termed in some parts of the country the "keeping place." Though fashious change, and the fancy for old furniture is one just now in vogue, at least the vogue, when moderated by knowledge and governed by good taste, is in most respects admirably contributing to the amenities of life and the encouragement of an artistic sense of the fitness of things. Hence these examples are useful and timely. The Seventeenth Century oak table, lent by Miss E. P McGee to the Victoria and Albert Museum, is an exceptionally interesting and pretty example on the gate leg principle, with splat-shaped supports fitted with drawers. It cannot claim to be very convenient for meal use, and would be reserved more for occasional purposes. The oak dresser came from Fritwell Manor, Banbury, It is fitted with side cupboards, with panelled doors on either hand of the fixed shelves. There are two drawers below, and brass drop handles on turned front supports, and low stretcher rails 4 ft. 6 in, wide. The old walnut cabinet is beautifully veneered—It is 6 ft. high and 3 ft. Jin. wide, and fitted with drawers, the piece being Queen Anne in character. It was sketched at Croydon, like the Jacobean chest shown next to it. This is of about the chest shown next to it. This is of about the same width. The Early Eighteenth Century mirror is in walnut.

### XIV. HANOVER STREET, W

These premises were built for Messrs. Weeks and Co., music publishers, from the designs of Mr. Delissa Joseph, and have been united to No. 6. Pollen Street, the premises in the rear, also designed by the same architect. The basement and ground floors are eccupied by the shop and showrooms, some of the upper floors being used as practice portitions. In designing the front, advantage was taken of an existing area, giving the right to construct the large bay. The front is carried out in Portland stone. The general contractor was Mr. C. F. Kearley, the electric lift by Messrs, Waygood-Otis, Ltd

A block of buildings added to the Aberystwith County School, at a cost of ever £3,000, has been formally opened. The contract was carried out by Mr. E. Jenkins, of Aberystwith, from plans prepared by Mr. G. E. Dickens-Lewis, M.S.A., Pride Hill, Shtewsbury.

A church hall and institute at Willington, Co. Durham, built at a cost of £3.000, has been formally opened. The architect was Mr. W. A. Kellett, of the firm of Messrs, Kellett and Clayton, Bishop Auckland, and the contractors were Messrs, W. Hope and Son, Coundon,

The American Institute of Architects held
its annual convention on the Pacific Coast in
Getober, sessions being scheduled both at San
Francisco and Los Angeles. The members were
present in San Francisco during American
Builders' week, when an address was delivered
by Mr. R. Clipston Sturgis, president of the
institute, on the subject of "The American
Builder."

In the competition for the design of Carson College for Opphan Girls, to be built near Chestnut Hill, Pennsylvania, the design submitted by Mr. Albert Kelsey, of Philadelphia, has been selected. Under the terms of the will of Robert N. Carson, \$1,000,000 is now available for buildings. Should further buildings be required they are to be paid for from the income of \$5,000,000 left as an endowment.

With an injunction hanging over their heads, the Chertsey District Council have spent £3.694 on their sewage works out of the revenue, and now propose to further improve the works by loan, adding 50 per cent, to the efficiency of both the coarse and fine filter beds. The estimated cost is £8.030. The details were recently laid before Mr. P. M. Crosthwaite, M.Inst.C.E., of the Local Government Board, at a local inquire.

OBITUARY.

Mr. Wilm Knox, architect, of Cleveland, Ohio, who has died in that city, aged fifty-five years, after two years' illness, was born at Springburn, Scotland, January 20, 1858. He was educated at the University of Edinburgh and at various art schools in that city. He and a various air semons in that they. We had a successful architectural practice in Edinburgh, when in 1836 he suddenly made up his mind to see the world. He straightway took a ticket to Australia, via America, but on his way through Chicago he observed the opportunities for work in that city, and immediately entered the office of Messrs. Burnham and Root. It was there he met Mr. John H. Elliot. Later Messrs, Knox and Elliot formed a partnership and started business in Toronto, Canada, where they did some notable work, among which was the Confederation Life Building. In 1893 they opened an office in Cleveland, Ohio. The Rockefeller building, the Hippodrome building, the Brotherhood of Locomotive Engineers building, in Cleveland, the Hippodrome and Areade at Youngstown, O., the Mooseheart Industrial School and Administration buildings, in Illinois, are among their principal works. Mr. Knox was a many-sided man. He made a study of mushrooms and fungi of Ohio, and was one of the most important contributors to that science. He made a number of beautiful water-colour drawings illustrating his mycological studies, and started to issue an illustrated work on mushrooms, but had only completed three parts. During the last two years of his life, when his health was failing, he took up etching, and did some very fine work, largely in etching former water-colours or sketches of his own. He was well known as a lover of art and a collector of rare books and etchings.

The death occurred at Seraing, Belgium, on November 20, of Adolphe Greiner, directorgeneral of the John Cockerill Company and president of the Iron and Steel Institute. He was born in Brussels in 1843, the eldest son M. Gustave Greiner, private secretary to King Leopold, and educated at the University of Liege. In 1864 he joined, as engineer-chemist, the Société Anonyme John Cockerill, which had been the first company on the Contiment to adopt the Bessemer process in 1862. In 1859 Mr. Greiner was appointed manager of the steel works, and in 1887 he became director-general, and was responsible for the introduction into the Cockerill works of basic process for steel making, the utilisation of blast furnace and coke-oven gas, and the general employment of electric energy for the transmission of power to all parts of the works. He was elected President of the Iron and Steel Institute in May, 1914, having been, for many years, a member of the council and Vice-President. In 1915 he was awarded the Bessemer Gold Medal. At the Leeds the Bessemer Gold Medal. At the Leads meeting of the Institute in 1912 the University of Leeds conferred upon him the honorary degree of Doctor of Science.

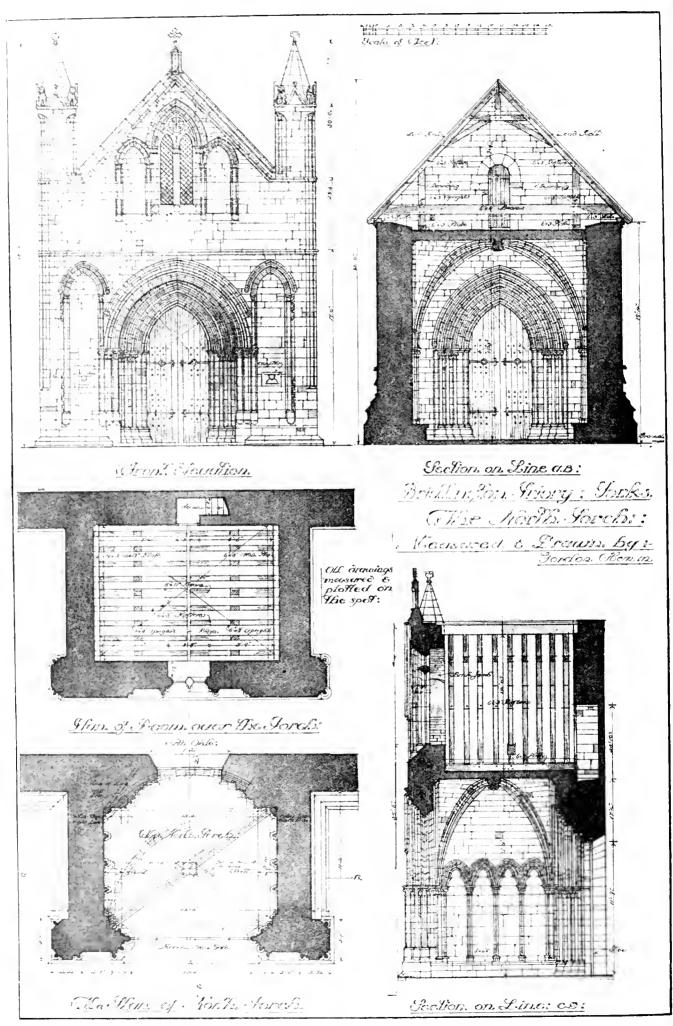

Mr. Ogilvie Dawson, builder Buckie, has been appointed burgh sarveyor and sanitary inspector at Findochty.

Mr. W. A. James, J.P., builder, of Cowbridge, an alderman and thrice Mayor of that borough, has died at his residence, Stafford House, Cowbridge, aged seventy-eight years.

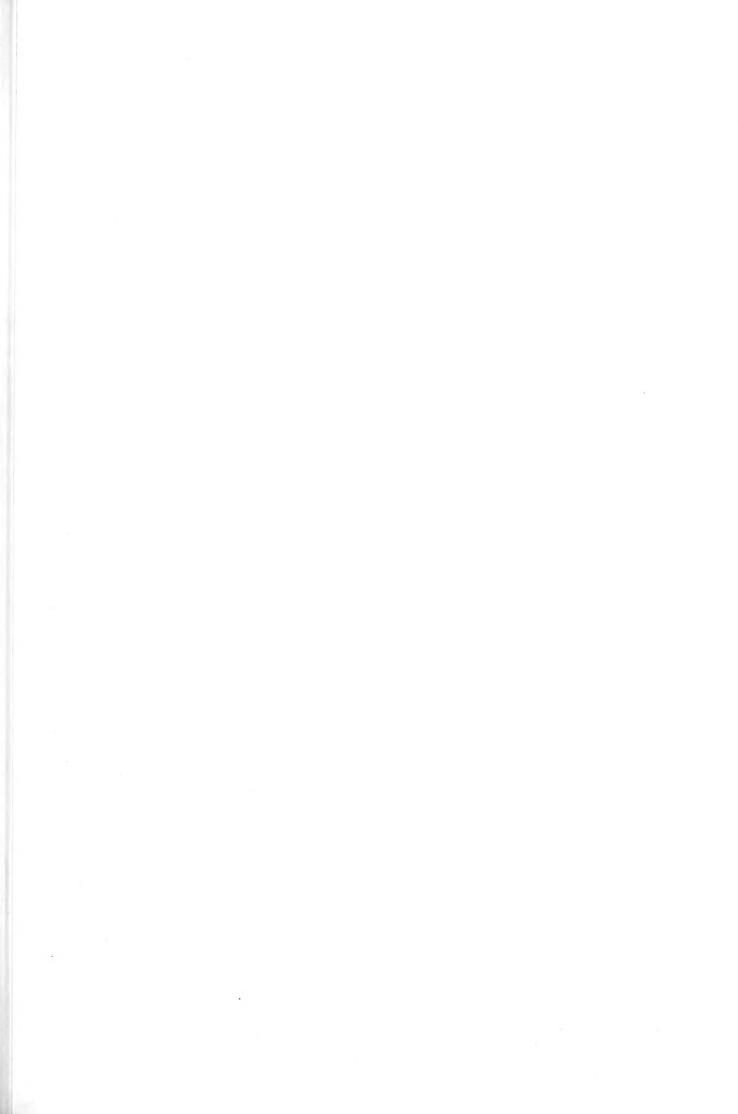

The Dartford Rural District Council have decided to purchase 4½ acres of land in order to house munition workers in the Erith district, and the sunweyor has been instructed to prepare plans and to obtain tenders for building seventy-two houses.

Frank Koester, consulting engineer, of New York, has been chosen by the City Planning Commission of Allentown, Pennsylvania, a city of 62,000 inhabitants, to develop an entire plan for the future development of the city along engineering, architectural, and landscaping lines.

The district committee of Upper Renfrewshire have agreed to apply to the Local Government Board for authority to prepare a town-planning scheme for the districts of Quarrelton, Elderslie, Inkerman, Porterfield, Potterhill, Crookston, Cardonald, Halfway House, Crokerhill, Nitshill, Hurlet, Arthurlie, and Gareside. All the areas mentioned are in course of development, or appear likely to be used for building purposes.

of tree-planting; main avenues based on outloo', and viewpoints, including any old buildness or valuable trees on the site; the fixing of lines of freetings to avoid monotony in some roads and to give regularity to others; the determination of the depths of sites and the useful appropriation of back-land; and the planning of angles of intersection to avoid traffic dangers and ugliness or awkwardness in effect.

Other matters, such as the relaxation of local by laws and the management of competitions, also demand the attention and co operation of architects, and if this is not given early it is in no small degree their fault if such are ignored. Architects, as it is pointed out, will not, as a rule, find themselves alone in promoting a demand for due consideration of the artistic interests of their own towns. The unitiative is properly with them by virtue of their professional training and outlook, and to their foresight and public spirit is committed the guardianship of the architectural possibilities inherent in any proposed scheme. Such disinterested public action has especial value when brought to bear upon municipal bodies. The presence of architects is necessary upon corporations, especially upon committees charged with public improvements, works, and town-planning schemes, where their expert advice is a proper ingredient in the constitution of voluntary representative committees. The sacrifice of tine and labour involved must be incurred in the interest of the artistic amenity of our towns, too often sadly neglected. The formation of local voluntary committees or societies of persons specially interested in architecture and art to promote public improvements may lead to great results if the opportunities afforded by a town planning scheme are taken. The practical attention which municipal authorities devote to such subjects generally overlooks the larger aspects, which are ultimately artistic, and though the proposals of merely architectural or asthetic enthusiasts may be deemed by the careless to be unimportant, it may be urged with force that the orderliness, cleanliness, arrangement, expansion, and improvement of our towns cannot be neglected without material loss to the national life. These vital interests in municipal life are in the main neglected, or from absence of correlation become ineffective, from want of thought more than from lack of heart, and architects are urged to recognise that these principles may be collected by representative persons in a committee or body that shall in each locality feel itself to be charged with a vigilant watch over all proposals for town development, extension, or improvement.

Contractors doing work on a highway run risks of liability for accidents of which they are not always aware. Even when their work is being done under statutory authority, a chim for damages may be successfully supported, although there is little, if any, evidence of negligence or breach of a legal duty. In the recent case of "Crane r. South Suburban Gas Company " the High Court laid down a broad principle, which is of very wide application to contractors and others doing work on a highway. The facts showed a simple story of the street. The gas company were repairing a gaspipe in the road, as their Act gave them power to do. For the work they had a fire on land close to highway. over which was a ladle with molten lead. Children were playing about and around it. of course, though well warned to keep away. Watchman on duty, called off a few minutes to help mates in trench. While absent, a boy accidentally knocked the ladle over, in kingdom.

juring little girl passing in road. She sued for damages in county court, where judge found negligence, and so breach of duty, by defendants not guarding fire, and gave her judgment, with £25 damages. Gas company appealed, on ground that they had legal right to do these repairs, and have fire for this purpose, which passengers must avoid, Also said they had done their work in this way for forty years without accident, and argued there was no duty on them and no negligence by them. The High Court, by two judges, raised the case to a higher legal plane, and got away from questions as to duty and also about sufficient evidence of negligence; for they held that though the gas company had a right to repair and use fire reasonably, yet they had by putting this fire and ladle of lead on, or near, the road created a nuisance on the highway, and so were liable for the consequences. Thus the only effect of the appeal, lesides confirming the county court indgment, was to strengthen the legal view of the liability for such accidents of contractors and others on highways.

The war and its vicissitudes are bringing about some strange episodes-not all, we fear. with such happy endings as one just related to us. Not many days since a young Australian invalided home here, and now in one of the London hospitals, wrote to the London County Council asking if they could find his brother, who, so he stated, had been engaged on that body as an architect. Prompt search was made in the Superintending Architect's Department, but no such name could be found; but the always helpful secretary of the Superintending Architect was not satisfied to let matters rest there, and himself paid a visit to the invalided soldier in the hospital to elicit further particulars. These obtained, another search was made, and it was dis covered that the brother's connection with the L.C.C. was that, as an under-study, he had helped to make one of the designs for the competition for the County Hall. He was speedily communicated with, and the two brothers. who had not seen each other for some years. have joyfully met, and we trust, as all will. that the reunion may be speedily followed by the complete recovery of the sick soldier. Meanwhile we shall not be surprised if "Ask the County Council" displaces the popular "Ask a policeman" as the likeliest solution of the problem of finding missing relatives.

The sanction of the Local Government Board has been given to a loan to the Leck Rural District Council for £2,400 for works of severage at English

The Stoke-on-Trent Corporation at their meeting on Thursday adopted plans by the gas engineer for works of remodelling and repair at the Burslein gasworks, estimated to cost £3,750.

Plans for a Roman Catholic Cathedral of the Sacred Heart, to be built at Superior, Wisconsin, are being prepared by M. Emil Ulrich, of Euclid Avenue, Cleveland, Ohio. The cathedral will adjoin the Catholic Orphanage recently built from M. Ulrich's designs.

Mr. Robert Griggs, F.S.L., A.R.I.B.A., of 17, Gray's Inn Square, W.C., died on Wednesday last, aged seventy-one. He had been an Associate of the Royal Institute of British Architects since 1876, and a Fellow of the Surveyors Institution since November, 1891. The cremation took place at Golder's Green on Monday at noon.

While searching among the valuable old documents of Wimborne Minster, for a sixteenth century presentment, the vicar (Canon J. M. J. Flotther) was agreeably surprised to find that a large bundle labelled "Presentments" was in reality a series of churchwardens' accounts between the years 1403 and 1475. The accounts, which are in Latin, on parchiment, have hitherto apparently escaped notice. They are among the oldest in the kingdom.

# PROFESSIONAL AND TRADE SOCIETIES.

EDINBURGH ARCHITECTURAL ASSO-CIATION .- The opening meeting of the session of the Edinburgh Architectural Association was held at 5, Queen Street, on Friday evening, the president, Mr. T. Forbes Maclennan, A.R.I.B.A., in the chair. Referring to the distress in the profession caused by the cessation of building work, Mr. Maclennan pointed out that if private enterprise in building was entirely stopped, as seemed to be the desire of the Government, the National Exchequer was bound to suffer. They all Exchequer was bound to suffer. They all realised, however, that the one all-important thing for the nation was that the war must be fought out to a victorious conclusion. If we did not win, if German kultur were to be imposed on us, we were better dead; but if we did go on to complete victory If we did not win, if German kultur there was every reason to hope for a great advance in the development of their art in a more peaceful atmosphere than they had ever known. Professor Charles Gourlay, B.Sc., A.R.I.B.A., of the Royal Technical College, Glasgow, delivered a lecture, illustrated by lantern slides, on "Santa Sophia, Constantinople," He referred to the interesting fact that this church, the greatest monument of the Byzantine style of architecture, was erected within the area comprised in the site of the ancient town of Byzantium, whence the He then showed style derived its name. style derived its name. He then showed illustrations of plans and interiors of Greek. Roman, Early Christian, and previously-erected Byzantine buildings to allow of a true appreciation of the great advance made by the magnificently-conceived plan of Santa Sophia, with its beautiful interior, upon those of any other building then in existence. Because of its size, the church was known as "The Great Church." and it was creeted "The Great Church." and it was creeted for the Emperor Justinian by the architects Anthemius of Tralles and Isidorus of Miletus, between the years 532 and 537, when the Byzantine style was at its culmination: hence its composition and details were of the choicest The plan of the church design and execution. was fully studied, including its nave, aisles, narthexes, and gallery; then followed views of the exterior and interior, and also of details, which were all described.

EGYPT EXPLORATION FUND.-The annual meeting of the Egypt Exploration Fund was held on Friday in the Hall of the Royal Society, Burlington House. Mr. J. S. Cotton occupied the chair. The report of Cotton occupied the chair. The report of the Committee pointed out that the reorganisation of the Society, carried out in 1913, had had to be modified owing to the exigencies of the war. The number of members had decreased from 321 to 260, and the Society had lost a large number of foreign subscriptions. Expenses too, had naturally gone up. No work had been done in Egypt during the past winter by the Fund as a whole. The American Committee, however, being under no obligation to save, had gone on with its special work at Balabish, under Professor Whittemore and Mr. Wainwright. Their most important discovery was that of a pan-grare cemetery, which yielded interesting Egyptian objects of Middle Kingdom types. besides those of the pan-grave people them selves, among which was a pot of pure prodynastic type. An Eighteenth Dynasty cemetery was also explored, which yielded Mycenæan "Bügel-Kannen," and among many other objects, including a head of clear glass, which showed that transparent glass was undoubtedly already manufactured at that early period The hon, treasurer re-ported that the income of the Fund, apart from special donations for the Osireion work or other purposes, showed a decrease as compared with the previous year, of £575, and that the adverse balance on the year was £653. Measures had been taken by the Committee which should effect a saving of at least £450 in salaries this year. No work in Egypt was proposed this season, either for the Fund proper or the Græco-Roman branch. but the American Committee proposed to take up the exploration of a site in the Delta, Tell Tibelleh, near Mansûra. The public lectures of the Society would go on as usual, and the memoirs would continue to appear when ready for publication.

THE SANITARY INSPECTION OF DWELLINGS.—The annual meeting of the West of Scotland Sanitary Association was held on Friday in the Religious Institution Rooms, Glasgow. Mr. R. Easton Aitken presided, and moved the adoption of the report, which referred to the importance of a regular and systematic inspection of house drainage and piping. The Association had had before them numerous cases in which defects were only discovered after illness had drawn the attention of the occupants to the need of inquiry. It was a false economy to dispense with precautions simply because a defect might not be glaringly apparent. Mr. Paul Rottenburg, LL.D., seconded, and the report was adopted.

# LEGAL INTELLIGENCE.

CLAIM AGAINST A CORPORATION.—At the Manchester Assizes last week, before Mr. Justice Ridley, the greater part of Tuesday was occupied with the hearing of an action in which Mr. Benjamin Place, the owner of the premises 95, Bury Road, Rawtenstall, was the plaintiff, and the defendants were the Mayor and Corporation of Rawtenstall, the local sanitary authority. By agreement between counsel on both sides the case was heard by the judge without a jury. Mr. Eastham represented the plaintiff and Mr. Sutton the defendants. The claim was brought to enforce an award under the Land Clauses Act for compensation in respect of damage alleged to have been done to the plaintiff's property during certain sanitary works which the defendants had carried out. There was an alternative claim for the disturbance of the plaintiff's rights. The questions at issue related to certain drainage, and the Court heard legal argument at some length. In the end the judge found for the plaintiff in the sum of £108. Mr. Sutton asked for a stay of execution in order to consider whether or not the agreed to bring into court the amount of damages awarded, and the costs, and asked for three weeks in which to consider the question of appeal. The judge acceded to the application.

COLLAPSE OF BUSINESS PREMISES AT DEWSBURY.—BLAKEY v. BOOTH.—His Honour Judge McCarthy gave judgment at the Dewsbury County Court on Thursday. November 18, in the action brought by George Blakey and Son, Limited, shop fitters, of the National Works, Wakefield, against Herman Booth, contractor and builder, of 16. Cedar Grove, Bradford Road, Patley, for £33 15s. 3d., damages for alleged negligence in carrying out excavations in the passage formerly running between the London City and Midland Bank and the Oxford, Market Place, Dewsbury, and now embraced in the premiscs occupied by the Public Benefit Boot Company. Mr. T. P. Perks, barrister, appeared for the plaintiffs, and Mr. J. A. Greene, barrister, represented the defendant. The case was heard on October 23, when evidence was given by many witnesses on both sides as to the circumstances which led to the sudden collapse of, and into, the trench which was being excavated, and his Honour reserved judgment. His Honour now said that by arrangement between the learned counsel the only question for his decision at the moment was that of liability. The figures were agreed, except as to one amount on which the defendant reserved his rights, and the negligence was admitted. In June last the plaintiffs were fitting up a shop for the Public Benefit Boot Company, and they arranged that the defendant's men should do all the necessary bricklayers' and masons' work. Defendant received from the plaintiffs 25 to 35 per cent, gress profit on the wages actually paid by him to his men, and a profit also on such materials as he supplied. Mr. Greene conterded that the defendant's men were merely lent to the plaintiffs, and that defendant was not liable for their nerligence. The question arose as to whether the contract was that the defendant was to do the work and have control of his men, or was it one merely to supply workmen who were to be under the control of his men, or was it one merely to supply workmen who were to be under the control of his men, or was it one hoth. Defendant w

opinion, was that the defendant should do the builder's work which might be found necessary as the job progressed, as and when required by the plantiffs, and that his remuneration was to be the profit which he made on the wages and materials by charging the scale of prices of the Federation of Builders of the district, and, therefore, he found that the defendant always had, and the plaintiffs had not, control of defendant's workmen. Accordingly he found the defendant liable. The question of how the judgment had to be entered relative to the figures on both sides was discussed at judgment should be deferred until counsel had had the opportunity of going thoroughly into the figures. It was agreed, however, that plaintiffs should have all costs on the issue of negligence in any event. Mr. Greene asked for a stay of execution, which was granted for twenty-one days.

THE LEGALITY OF STONE ALTARS.—At a sitting of the Consistory Court of Lincoln, before the Chancellor (Mr. G. J. Talbot, K.C.), the petition of the year and churchwardens of Swinstead, praying for a faculty to place a stone altar with brass cross and candlesticks thereon in the south aisle of the church has been heard in Lincoln Cathedral. The petition was opposed by Mr. Houlder, a parisinioner, on the grounds that the proposed erection was illegal, and would be likely to promote superstition; that a cross resting directly upon the holy table was illegal; and that the application for a faculty had not been submitted for approval to the parishioners at a vestry meeting. Mr. Harold Hardy, for the petitioners, stated that the proposal was to place an ancient stone slab, which bore the Consecration crosses upon it, and had been in the church for many years, upon stone piers, or, in the alternative, upon a wooden frame as a side altar in the south side. Mr. Bond, the architect, stated that the stone slab had obviously formed part of an ancient stone altar belonging to the church. Mr. Houlder also gave evidence, and said that he objected to stone altars because they were associated with the Mass and tended to superstition and were illegal. After legal argument the Chancellor allowed a faculty to issue for the placing of an altar in the south aisle with the cross and candlesticks thereon, the altar to consist of the ancient stone slab upon a wooden frame. The Chancellor, in his judgment, said that the objection to the proposal was really merely a technical one. Its covering generally prevented one from knowing the material of which the altar was made. The question was whether a stone altar was allowed by law. Referring to the cases of "Faulkner r. Litchfield," in 1849, and "Western r Liddell," in 1855, he said there were two decisions of the Arches Court and one of the Judicial Committee of the Privy Council, where fixed altars were held to be follow those decisions. But the petitioners had suggested as an alternative

on a wooden frame

RIGHT TO LATERAL SUPPORT

HORSHAM AND SHEARLEY v. T. C.

SMITH.—In this action, heard before Mr.

Justice Bailhache, two freeholders at Blackheath, Kent, claimed damages from T. C.

Smith, builder, of the same district, for removal of lateral support of the rear fences of
seven houses in Eastcombe Avenue, Blackheath,
by the excavation of gravel from the bank between plaintiff's back gardens and Moretta

Road. The defendant attributed the settlement of the fences to rainwater falling from
plaintiff's worksheps, summer houses, and
greenhouses upon the fences. After hearing
evidence, Mr. Justice Bailhache gave judgment for plaintiffs, with costs, for £110, to be
reduced to a shilling if within four months a
bank was erected and the fences repaired to
the satisfaction of an independent surveyor to
the chosen by the experts on either side or
failing that, his lordship.

It has been decided to enlarge the church at Cyfarthfa, Mon., from plans by Messrs. Johnson and Richards, of Merthyr Tydfil.

<del>> • • • • •</del>

son and Richards, of Merthyr Lydni.

In the King's Bench Division last Friday
Mrs. Helena Wakley, the wife of Mr. Horace
Magennis Wakley, of Avenue Road, Regent's
Park, claimed damages from Mrs. Elizabeth
Davies, who formerly carried on the business of
a Court dressmaker, as "Elize Kreulzer," at
11. Hanover Square, W., for alleged slander,
The jury returned a verdict for the defendant.

BIRMINGHAM.-A 10,000 kilowatt temporary electric generating station has been constructed on a portion of a site at Neohells, for the Corporation of Birmingham, to meet pressing demands. The site is bounded by the Birmingham and Warwick Junction Canal and a branch line of the London and North-Western Railway, which is on a high embankment, and by the dust destructor. Between the entrance gates and canal is a roadway 32 ft, wide, and at right angles to this roud is the inclined cartway carried on arches, which serves for the delivery of refuse to use destructor. The foundations for the temporary station rest upon a sub-soil consisting of ash from 5 ft. to 7 ft. deep. Over this sub-soil concrete rafts, composed of steel grillages and reinforced concrete varying in depth from 1 it. to 2 it. 6 in., were floated. The weight of the steel structure is distributed evenly over the steel grillages. The buildings are constructed of a steel framework covered with an asbestos corrugated sheeting, which forms the roof and the walls. The dimensions of the engine and boiler-house together are 92 ft. by 124 ft, wide. The boiler-house contains six marine type boilers. In the engine-room two 5,000-kilowatt 5,500-volt 25-cycle Westinghouse turbo-alternator sets have been erected. As there is no basement to the engine-room, the condensers and air filters have been erected on the same level as the turbines and alternators. The works have been carried out under the direction of Mr. R. A. Chattock, chief electrical engineer to the Corporation. The contractors for the foundation work were Messrs. J. J. Shardlow and Co., of poration. Leicester, and for the walls and roofing Messrs. Thompson and Hughes-Jones, of Messrs. Thompson and Hughes-Jones, or Budge Row, Cannon Street, E.C. HIGHFIELD, SOUTHAMPTON.—During

the past sixteen months there has been in progress at Christ Church, Highfield, neen in progress at Christ Church, Fagineid, an enlargement of the fabric. The whole of the west end of the nave has been extended, thereby increasing the accommodation from 620 to 930, whilst a vestry has been added also. The extension of the east end, and the provision of a porch beneath the west window are introduced by the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the s provision of a porch beneath the west window are improvements which will be taken in hand after the war. The present work has cost about £5.500. The walls have Bath stone dressings, and the west end is filled with a four-light window. The building has been carried out by Messrs. A. White-Bowman, of Bournemouth, to plans prepared by Messrs. J. Oldrid Scott and Sons, Dean's Yard, Westminster, the work being under the direction of Mr. H. C. Kite, the foreman and manager. During the progress of the work the builder, Mr. A. White-Bowman, and Mr. J. Oldrid Scott, F.S.A., the father of the present architect, both passed away.

TRADE NOTES.

In most towns swimming baths are closed for In most towns swimming-baths are closed for the winter months. This gives an opportunity to repair any leaky places. The bottom of the swimming-bath at Fetters College. Edinburgh, which leaked very badly, has been re-cemented and lined with glazed bricks. We have re-ceived a report that for making the cement waterproof the powder Pudlo was employed with excellent results.

As St. Augustine's Mission Church at Ches perfield has become dilapidated, a new church is to be built at a cost of £2,500.

A nurses home is to be added to the Here-ord-hire General Hospital in Hereford city fordshire General Hospital in Hereford city after the war. Messes, Nicholson and Clarke are the architects, and the propes d expenditure is about £4 000.

# Om Office Table.

The memorial which the Committee on War Damage is to present to the Prime Minister says: "Although the Government scheme only came into force on July 19 last, immense losses and great hardships have been suffered in many districts, and it seems to your memorialists exceedingly unfair that these should not be borne by the nation; and notwithstanding the fact that the withdrawal of the scheme would now involve a considerable expense in the first instance, it is yet, for the reasons stated above, highly desirable that the Government should retrace their steps in the matter, repay the premiums already received, and, as trustees for the received, and, trustees for the nation, proclaim their intention of giving fair compensation to the owners of property and goods that have already been, or may in future be, damaged or destroyed either by aircraft or bombardment. This, in the opinion of your memorialists, is the mamfest duty of the Government, and one which they are bound by every consideration of justice, expediency and public policy, to recognise and carry into effect. The following bodies (in addition to those already reported) have decided to join in the presentation of this memorial:—Municipal Corporations; Bromley (Kent), Chatham, Croydon, Faversham, Hertford, Newcastle under Lyne, New Romrey. Scarborough. Wednesbury; and than District Councils: Bracebridge, Linguishire, Clacton-on-Sea, Haverhill (Essex). Heston and Isleworth, Long Sutton, Normanton, Seaham Harbour (Durham). Shering-ham (Norfolk), Stanley (Yorks), Tottenham.

The Kalendar of the Royal Institute of British Architects for the eighty-second session, just published, contains 482 pages, against 492 last year. The list of memberagainst 492 last year. The list of membership contains the names of 864 Fellows, 32 retired Fellows, 1,707 Associates, 1,904 Licentiates, 12 Hon. Fellows, 54 Hon. Associates, 249 Hon. Corresponding Members, as against 858 Fellows, 32 retired Fellows, 1,694 Associates, 2,045 Licentiates, 12 Hon. Fellows, 55 Hon. Associates, and 65 Hon Corresponding Members at the same period last year. There is thus shown a slight in-crease in the classes of Fellows and Associates, a natural decrease in the stationary class of Licentiates, part due to transference to the rank of Fellows, and more largely to the inevitable mortality, while the compara-tively large decline in the number of Hon. Corresponding Members is the result of the excision of the names of those of nationalities at war with us. The sessional meetings will be held at 3 p.m. on December 13, January 3 and 51, February 28, May 1 and 13, June 5 and 19. The competitions for prizes and studentships have been suspended for the duration of the war.

Four districts have been chosen for the work of the Civic Surveys now in progress

Greater London, South Wales, South Lancashire, and South Staffordshire. A number of professional men who have been hard hit by the war are doing the work. In each of the areas they are preparing a series of craphic diagrams showing the physical characteristics of the area; vital statistics as to death and disease for, say, fifty years density and growth of population: provision of playing fields, recreation grounds and parks; character and growth of industries; extent to which present traffic needs are met and forecast of probable future requirements: conditions under which housing areas have developed in the past, and a comparison with newer views in the laying out of building estates. These diagrams will be of the utmost value.

Shortly after the death of Sir Laurence Alma-Tadema, R.A., a committee was formed for the purpose of honouring his memory by a public memorial over and above the inscribed slab on his grave in St. Paul's Cathedral which the Royal Academy had undertaken to provide. While funds were being raised for the purpose, the Misses Alma-Tadema presented to the committee the original marble hust of their father executed

by the late Ouslow Ford, together with the pedestal designed by Sa Laurence humselt; and all the subscriptions were then devoted to the purchase of Sir Laurence's library. with a view to presenting it to some public institution in London, where it would be readily accessible to artists and students of ait and archaelogy. An offer of the collection, together with the of the collection, together with the bust, was made to the Victoria are Albert Museum, and was gratefully accepted The "Alma-Tadema Memorial Library," which was tormally presented to the Museum by Princess Louise, Duchess of Argyll, on Wednesday, and was accepted by Sir Cecil H. Smith, the director and of the museum, contains over secretary 4,000 volumes and pamphlets, dealing pain cipally with the monumental and artistic side of the archaology of antiquity. Numerous books treat upon the painting of the Historical School, and an important feature of the collection is a series of 163 portfolios contaming photographs and sketches by Sir Laurence of details of Clas portfolios sical and Oriental architecture, act, costume and life which interested him so deeply. The collection was purchased by subscribers for £1,000, but had been returned for probate at three times that figure, and is housed in two wings of the West Room. No. 74, of the Art Library at the museum. Sie Cecil Smith has had a synopsis drawn up of the contents of the portfolios, and he referred to without any subject can The collection of printed and illustrated books consists of several thousand volumes. A complete catalogue has been prepared, and when funds are forthcoming it will probably be printed

The taxation of sewers was considered on Friday by the Treasurer's Committee of Edmburgh Town Council. The question came up through a letter that was received, intimating that the Treasury would not agree to relieve the corporation of the tax on sewers unless a Bill were introduced by agreement to have the sewers taken out of the Lands Valuation It was resolved to communicate with Act. It was resolved to communicate with the other four large cities, and with the Convention of Burghs, who had been associated with the corporation before in the representation made to the Treasury on the subject, with a view to adopting a course. It is understood that the would not be unwilling to consider the matter sympathetically were it not for the present circumstances of the country and the difficulty of getting through Parliament a Bill that would be agreed to on all sides.

Presiding at the twenty-fith annual meet ing of the Glasgow Workmen's Dwellings Company on Thursday, Sir D. M. Stevenson recalled that the company was formed to provide decent, sanitary houses at lents no gher than those of the ticketed houses the same neighbourhood. They had been higher than those of able to do so for some years, the rents being sufficient to pay the normal value of money from time to time, which the company set down at 4 per cent. For the last nine years, however, the company had not been able to pay more than  $3\frac{1}{2}$  per cent. But matters had now come to a crisis. An amount equal had now come to a crisis. An amount equal to 12½ per cent, of the rental had been laid aside from year to year for depreciation and repairs. That amount reduced the book value of their properties by something over £4,000, but still left the book value a great deal higher than the properties would bring in the market. On the other hand, if they were called muon to randage the landinges in were called upon to replace the buildings, it would cost them a very great deal more than their book values. To meet the present position the rents would require to be in-creased by about one-third, but meantime the directors did not propose to make any change, but to await the promised legislation With regard to the higher rate of interest which bondholders were demanding, he thought it was a shocking thing that the Government should give 45 per cent, to people for their money and say to bondholders that they should not ask more than  $3\frac{1}{2}$  per cent Mr. D. M. Scott seconded the adoption of the report, and other speakers urged the necessity for increasing the depreciation fund, but did not see how it could be done with F.R.4.B.A., the borough architect.

the present rents, and also pay the norma, rate of interest. The report was adopted

"Lime and Cement," by J. G. Alams and C. A. Elhott (London, Blackie and Sch. Lumited, 50, Old Barley, E.C.) is one of the Limited, 50, Old Bailey, E.C.) is one of the interesting. Limited, and therefore it need hardly be said is valuable and reliable.

Two interesting old documents have been presented to Princeton University, near Trenton, New Jersey, by the Hon Bayard Stockton, of the class of 1872. These are the original architect's drawing of Ivy Hall on Mercer Street and the Old Chapel, which stood near the eastern end of Nassau Hall until it was taken down in 1896 to make room for the new University Library. The drawing of the Old Chapel bears the signature of John Notman, the architect, and is dated April 13, 1847. It slows the front and side elevations, the interior and the ground plan. with its cruciform outlines, which at time caused much concern in Presbyterian circles. The other drawing shows the front and side elevations and the ground plan of Ivy Hall, which was originally creeted as the home of the Princeton Law 8 hool.

The new City Hall, in Cleveland, Ohio, which is rapidly nearing completion, is the third building of an important group plan to third building of an important group plan to be erected. It is Free Classic in style and stands at the foot of East Sixth Street, on a high bluff, overlooking Like Erie to the north, and balances the Cuyahoga County Court house in the group plan, being on the opposite side of the Mall. The Mayor of the city has been finally successful in coming to an agreement with Pennsylvania and Xew York Central Railroad interests, and the Gredban-Burnham Commany, Chicago, is now Graham-Burnbam Company, Chicago, is now ergaged in preparing plans for a tew \$17,000,000 passenger terminal to be the key note of the group. Mr Writer R. McCor-rook, architect to the Board of Education, has prepared plans for a central commercial school and office building for the Board of Education, to be erected at East Sixth Street and St. Clair Avenue, on the Mall, at a cost of \$1.000,000. This building will be five stories in height, with an anditoriam on the ground floor, a gymnasium on the top floor, and a running track on the roof. The Post Office has been bulk as part of the plan from designs by Mr. Arnold W. Beunner, of Boston, Mass. The sixth bulling in the group is the proposed public library, to occupy the site of the present City Hall, and for which an architect his not yet been The group plan commission conselected. Messrs, Frederick Law O'msted and to sista Arnold W. Brunner, of Boston, and Frank B. Meade, of Cleveland, who receive \$1,500 a year each and travelling expenses for their advisory services.

Messrs. Robert Jenkins and Co., Rotherham, have issued a new catalogue and list of discounts of their well-known wrought-iron and steel-welded and riveted boilers of every description for heating by low-pressure, and water or steam, and for domestic hot water supply, also of their brazed pure copper boilers and cylinders, and their vertical boilers for steam engines or cooking purposes. In either line the reputation and experience of this well-known firm is second to none in the Empire, and the preliminary notes in the introduction will be found most valuable by all architects, builders and others. It will be noted that the gross prices of boilers from pages 12 to 19 inclusive have been increased, but instead of their being under Class E as formerly, they are now subject to a greater d'scount under Class D.

Mr. Taylor having resigned his as borough engineer to the Maldle-broughs Corporation, Mr. Scotson was on Wednesday night appointed his successor at £300 a year.

Dr. James M. Baldwin, honorary professor of the University of Mexico, will deliver the Herbert Spencer Lecture in the Lecture Room of the Oxford University Museum on Wednesday, March 15, 1916, at half-past two in the afternoon.

The West Sussex County Council have agreed to obtain further expert opinion upon the condition of Norfolk Suspension Bridge, which carries the main road over the Adur between Shorenam and Lancing. The scheme for re-Shorenam and Lancing. The scheme for construction is estimated to cost £20,000.

At a representative meeting held at New-castle on November 24 the Lord Mayor (Mr. George Lunn presiding, it was resolved to invite the British Association to meet in New-castle next year on lines similar to those adopted at the Manchester meeting.

A new building is to be erected for the Henne of the Daughters of Jacob on the block bounded by 167th Street, Finlay and Teller Avenues, in New York City, Mr. Louis Allen Abramson, 220, Fifth Avenue, New York, the architect, estimates the cost at \$400,000,

Quartermaster and Hon. Major Llewellyn Plantas, 6th Battalion Welsh Regiment, died at Swansea on Monday while home from the front on sick leave. He was the second son of the late Mr. William Thomas, a well-known Swansea builder, and was staving with his brother. Captain Thomas, Chief Constable of Swats a.

A payement of 2×4-in, timbers is the unique feature of an automobile speedway recently completed near the city of Chicago. The track, which is at Maywood, Ill., is two miles long, and consists of two parallel straight sections connected by curves at the ends. The track is about 65 ft, wide on the tangents and 75 ft, on the turns, which are banked to a maximum of 25 ft. The track is supported on timber trestling, the track proper resting on 2×12-in, joists. The flooring or payement consists of 2×4 in tamarack timbers, placed on edge longitudinally of the course. The timbers are about 16 ft, in length, and lap about 2 ft, at the ends, and are spiked together at intervals.

#### LATEST PRICES.

N.B.—All prices must be regarded as nerely approximate for the present, as our usual sources of information are in many bases failing us.

# TIMBER.

Owing to stoppage of supplies all prices have advanced considerably.

In the north aisle of the Abbey Church at Romsey a tablet, erected as a memorial to Lieut. Athelston K. D. George, who was mortally wounded at the battle of the Marne, has been unveiled. The tablet is of white Carrara marble. In each of the upper angles is a crest, one being that of the Dorset Regiment and the other a family crest. Along the full length at the bottom is a sheathed officer's sword, entwined in branches of leaves and berries. The framing round it is of polished Rouge Royal marble.

# THE VENTILATION OF PICTURE doubtedly destined to completely revolu-HALLS.

# By ROBERT BOYLE.

the teaching communities as a valuable educational aid, and it undoubtedly forms one of the most instructive of object lessons, making an instantaneous and lasting impression upon the mind, expecially of the young.

The picture hall may, therefore, justing where will be hopefaid for both their health and the globes, and which it may supersed as a more efficient teacher.

There will be fewer truants then, and object lessons, making an instantaneous and lasting impression upon the mind, expectation of the young.

The picture hall may, therefore, justing where will be hopefaid for both their health and

tionise the present methods of teaching.

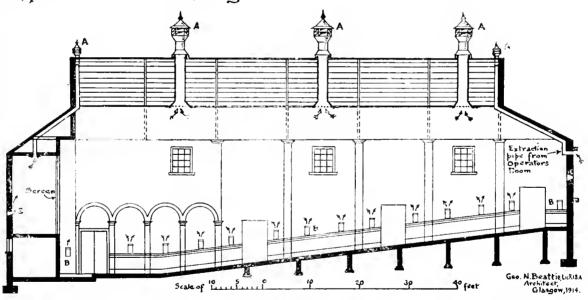

The time will come when the cinema tograph will be an essential in every school—as indispensable as the black-The cinematograph may, at no very school—as indispensable as the black-distant date, be generally adopted by board and the globes, and which it may

commendable example of Leith. It is satisfactory to note that Brighton has already done so, making it compulsory for all picture halls and other places of amusement in that town to be efficiently and satisfactorily ventilated.

Government inspectors should certainly be armed with greater powers in respect to the ventilation of not only places of amusement, but of all public buildings. including churches, schools, hospitals. etc. It is, indeed, well known that many people abstain from going to church or to rank as an educational institution where will be beneficial for both their health and the theatre, much as they would like to do

# THE "BOYLE" SYSTEM OF VENTILATION

Applied to Picture Hall, Glasgow.

B, AIR INLET BRACK. A, BOYLE'S LATEST PATENT "AIR-PUMP" VENTILATORS, DESIGNSNOS. 230 & 231. ETS. FITTED WITH REGULATING VALVES.

a little judicious recreation may agree-ably and profitably obtain both by making a visual acquaintance with almost everything and anything that is worth seeing or knowing about in this wonderful old world of ours; besides bringing within their immediate purview a faithful representation of important and interesting current events throughout the world.

There is really nothing that can compare with the cinematograph as a universal instructor, making the acquirement of knowledge a source of the keenest enjoyment, instead of, as is but too often the case, an irksome task to be shirked when ever possible. Its educational possibilifor the community if the sanitary authorities are, indeed, illimitable, and it is un-irities of other towns followed the highly the success of a natural system of ven-

those in quest of knowledge combined with tempers, as well as that of the scholars, and more happiness will exist all round.

That the ventilation of picture halls, of which there are many thousands in this country, demands, in the interests of the public health, the most careful attention goes without saying, and also the closest supervision, as is evidenced by the published report of the investigations recently made at Leith into the sanitary condition of the air in a number of local picture halls, and which was found from the tests made to be so foul and poisonous that in at least one case the hall had to be closed. Franklin says: "A people's health's a nation's wealth," and it would be well

so, simply because of the foul air or the intolerable draughts so often found in these buildings.

" Statistical inquiries Parkes says: prove beyond a doubt that, of the causes of death which are usually in action, impurity of the air is the most important. Air is the prime supporter of life; health, even life itself, is dependent upon its purity.'

Many different forms of ventilation have been tried, but in most cases with but very indifferent results, artificial methods proving, apparently, as unsatisfactory as natural where these have been incorrectly and unscientifically applied.

. Then are  $m_{\rm p}$  ment making what may be called two processes:

(1) The dry process, (2) The next

The wet process.

DRY PROCESS.

In the dix process, assuming the raw materials are limestone and clay, they would have to pass through the Jaw crusher machine and the drying drums, the grinding plant constitution sisting of ball and tube mills, or combination tube mills, and then be conveyed to the mixmg and storage silos, after which it would be burnt in the kilns. From the kilns it goes through the same grirding process as it does

### WET PROCESS

In the wet process the treatment, assuming In the wet process the treatment, assuming the raw materials are coalk and clay, or mark consists of passing the raw material through the reds, from the rolls it drops into the wash mills, from the wash mills, where water is added, it is passed to the wet tube mills for finer grinding; from the wet tube mills it is stored in the slurry mixers and storage tracks. From these tanks it is pumped by the slurry pumps to the kilns. The clinker from the kilns is coaled by passing through a large the kins is cocled by passing through a large cooler like a small kiln, and from there is taken by conveyors into the dry grinding nafl, where it passes through ball and tube mills, and finally, after it has been ground to extreme fineness, sufficient to comply with the British Standard Specification, the cement is taken to the silos or storage bins, and when cool is ready for use.

When the raw materials are limestone and clay they pass through the jaw crushers, from there to the wet ball and tube mill, or combiration wet mill, where water is added; from there to the slurry mixers and storage tanks. and the mixture is pumped by the slurry pumps to the kilns. The dry grin ling plant

i. the same to each method.

# GRINDING MILLS.

s well known to mining engineers, ball and tube mills the latter in particular) are most satisfactory, and probably the cheapest and most efficient method for fine grinding. They lave been in use for many years now, and with the exception of minor improvements, have not been very much altered. In all mechinery in connection with cement menuficture special care has to be given to the heavy and continuous duty, and to the enormous amount of fine particles of cement dust that are liable to get in the bearings The jaw crusher is of the ordinary type used for breaking up ore of the type known as the Marsden crusher. The wash mills into

Marsden crusher The wash mills into which the chalk and clay, or mark, are tipped consist of very large circular tanks, in which mixing and breaking gear is continuously rotating. Water is added here, and the material used from those wash mills is known is "law shirty." For limestone and clay the wash mills are not used, but the wet ball and tale null or combination wet mil! are re quired, the paw crushers taking the place of

KILNS

There are various types of kilns for burning cement, and they may roughly be divided into three classes:

1 The vertical intermittent or bottle kiln, which "The Batchelor" and "Chamber" kilns are types.

2 The vertical continuous or shaft kiln, of which the "Schmeder" is a type. (3 The continuous rotary kiln.

In these short notes I do not propose going into detail with regard to Nos. (1) and (2).

No. 1) is fast becoming obsolete, and was

me of the early designs or methods for burn ng lune. In modern cement works it would ing lume. In modern cement works it would be a insidered far too expensive and unwieldy to work, on a count of the amount of labour rounined to landle the dry shury and clinker. Briefly, the kiln consists of a shaft into which dried shury and toke are fed at a certain beight placed in layers. Originally the gasses aped direct, but a later improvement was to take the gases underneath the shury beds. to take the gases underneath the slurry bedto take the gases undermeath the shirry bed-and utilise the waste heat to dry the shirry. One of the early kilns of this kin I was known as the "Johnson," and was installed at Green hithe. With this type the mixture takes som-ninety six hours to burn, and at least a day to cool down and another day to unload. It must be at once evident that the disadvantiges of this kiln are:—

(a) The heavy cost of labour.

(b) The incomplete burning of the clinker; and it may here be said that, in order to obtain "uniform cement," every particle must be equally burnt.

There is another design of kiln which may be placed between the vertical intermittent the vertical continuous, known as the "Hoffman ring kilu," which is simply a series of intermittent kilns with a common In the case of small works where the shaft output does not exceed about 400 tons per week, and the conditions are suitable, the vertical continuous or shaft kiln may be used. It has the above disadvantages, but on a much smaller scale. In this case slurry and coke are fed into kilus in layers about every halfhonr; this entails more labour than the intermittent type, and requires more skill, but obviates the large waste of time and heat obviates the large waste or time and inseparable from the intermittent type. The burnt clinker is taken from the bottom. difficulty experienced is that the clinker fluxes and adheres to the lining. Methods have been used to overcome this; one is to have a lining of ray material, such as briquettes, built up round the lining when the kiln is loade l. It may be said, generally, that the vertical continuous type of kiln is used with the dry process, when only about 20 per cent, of moisture is added to the raw materials, so that it is particularly economical in fuel consumption.

#### ROTARY KILN.

The third type of kiln, which is a later invention, and was first introduced by Ransome, consists of a long boiler shell, the length of which varies according to the particular design and output required; but in some cases they have been built as long as 250 ft., those in more general use being about 180 ft. to 200 ft., having a capacity of about 1,000 tons per week.

The cement industry has been entirely revolutionised by the use of the rotary kills, for, after a description of same, it will at once be seen that the labour employed is reduced to a minimum, that a much more uniform and even burning of the cement is possible, with the result that for ferro-concrete work rotary-kiln cement is nearly always specified, and will command a higher price than the other kind burned in brick kilns.

The kiln is made up of boiler plates, and consists of a tube, varying in diameter. For an output of 1,000 tons per week it is usually about 9 ft. 6 in. in diameter in the burning zone, and often weighs more than 300 tons. It is rotated on rollers, and is driven through gearing at a very low speed. The fuel is blown in, in the form of powdered coal, and ignited on reaching the burning zone, which attains a temperature of 2,500° Fahr. to 3,000° Fahr. The hot gases travel through the kiln, which is placed at a slight angle above the horizontal, with the cool end at the highest, and on thus to the chimney.

# COOLER.

In the cool or chimney end the slurry, which is taken from the slurry mixers or storage tanks, is pumped in, and finally reaches the burning zone, and the clinker produced drops into the cooler, which is like a small kiln, and also revolving. Cold air is drawn in through this cooler to cool the clinker, which clinker takes the shape of round, hard pebbles. An immense amount of time, labour, and thought has been spent on the designing of these kilns, for it is no easy engineering matter when one remembers the enormous weight to be revolved, the expansion and contraction that take place on a length of 200 ft. or more. There are now several firms in this country who can build most excellent kilns, and there is no need to place orders for these kilns abroad. The hard burnt clinker, on leaving the cooler, is then taken to a clinker storage or to bins, and then to the dry grinding mill. With the rotary kiln it is possible to run a cement works having an output of 2,000 to 3,000 tons per week with a staff of only thirty men per shift; whereas for the same output with the "Chamber brick kilns" this number of men

would have been necessary for working the kilns only.

#### FUEL.

The fuel used for these kilns is generally coal, but sometimes oil is used, and there is reason to hope that in the future waste gases from blast furnaces might be used. For the brick kilns cole is used.

The cost of production of cement has been largely reduced since the introduction of rotary kilns, and many members will remember the visit the Institution paid to the Newhaven Works, and also to Messrs. Martin Earle's, at Rochester, where the rotary kilns were in use, as well as some of the brick kilns.

In the works completed there will be installed three rotary kilns, each having an output of 1,000 tons.

#### COAL-GRINDING PLANT

In connection with rotary kilns, the coal is ground to powder, and for this purpose some form of tube mill is generally used. There are, however, quite a number of other types of mills for grinding coal. The coal has to be dried and ground, then it is fed into be done, and from the hopper is blown by a fan into the burning zone of the kiln.

After leaving the cooler, the clinker is taken along a conveyer that is specially designed for conveying hot materials either to a storage silo or dumping yard, and is then elevated to the top of the bins over the dry grinding mill. The dry grinding mill requires considerable care in planning and designing, for the machinery required is very heavy.

Rotary kiln clinker takes more power to grind than chamber kiln clinker, and the horse-power absorbed in grinding is very large. There are several methods or grinding the clinker, but the usual one is the combination of a ball-and-tube mill, but sometimes only a combination tube mill is used.

Unless special means are arranged for the removal of dust, difficulty is experienced in keeping the grinding mill clean, for naturally the clinker is ground to such a fineness that it penetrates everything, and it is difficult to keep the mill sufficiently closed in to prevent this.

In their mills my firm have arranged for each mill to have a capacity for grinding five tons of clinker per hour continuously.

The cost of grinding depends upon the fineness to which the material is ground; the finer it is ground the more expensive. Purchasers should expect to pay more for rotary kiln cement on account of the extra cost of grinding, and because it is more thoroughly and uniformly burnt, making it much stronger and superior to chamber kiln compart.

# 811 08.

After leaving the grinding mill, the clinker which is now ground is convoved and elevated into silos for storage. The slo buildings will have several bins with a total capacity of three to four weeks' output of finished cement, which will enable any purchaser when carrying out an important contract to have his own bin, and draw from it as he desires, so that he can be assured of the uniform quality of the cement. For ferroconcrete work this is important, as you are all aware.

The why and wherefore of the greater use of reinforced corcrete construction is not difficult to find. Those engineers who have had the designing of large structures to carry heavy machinery, such as is met with in industrial mills or for the building of large storage silos or bins, will fully appreciate these remarks, because with a reinforced-concrete construction it is a simple matter to demonstrate in figures the strength of such buildings and allow a proper margin or factor of safety; whereas with brickwork such a calculation is very difficult and certainly unreliable, for nobody can accurately say what is the adhesion of brickwork, and what factor of safety has been allowed.

Recently my firm has had to design some large silos, capable of holding 10,000 tons of cement, and it is surprising with brickwork how uncertain one is when finished as to the final strength. But if such silos are built with reinforced concrete, one can be certain of the factor of safety.

There are several methods of building the silos, but the best one, I think, is to design it of ferrosconcrete. The emptying of cement silos when packed closely is not such a simple problem as it appears. An ingenious method to use is the vacuum process, in which a cement bag is put into a pipe connecting it with the silo. A vacuum is then produced in this chamb i, causing the cement immediately to rush from the silo through the pipe into the bag, and fill the bag. As soon as the bag (which is automatically weighed) is filled to the correct weight, the vacuum is cut off and the door of the chamber opens to allow the man to remove the sack. The cement in the bag is then ready for rail or shipment. A large loading platform, with ample floor space, is required, with railway lines running alongside it, so that the bags of cement can be loaded into trucks.

To describe cement machinery in deta'l would require several papers, and probably many of you are familiar with the ordinary cement mills.

#### POWER PLANT.

One of the important questions to decide in relation to cement mills is the form of power to use, for in mills of this description the horse-power required is large, and the coal used for power purposes—i.e., for working the wash mills, the wet grinding mills, the pumps, the conveyers and elevators, the rotary kilns, the dry grinding mills, the coal dryer, and several other purposes—is quite an appreciable item of the total cost of cement, so that if this coal item for power can be reduced the price of cement can be appreciably lowered.

In olden days—in fact in many cement mills to-day—the power question has been sadly neglected, and thousands of pounds are wasted annually in fuel in not bringing the power plant up to date. Cement mills, perhaps more than any other industry, form an excellent proposal for running electrically on account of the scattered area occupied by the works and the fact that the wet mills, the rotary kiln, the coal-grinding plant, and the dry grinding mills are usually some distance apart, and each require a considerable amoum of power. If, therefore, steam was decided upon as the motive power, it would be necessary to instal a large steam engine in each of the above buildings.

For the mills that are being erected under my firm's advice, the directors have decided to use electric power throughout, so that there will be an electric motor-house for the wet grinding plant, another for the kilns, another for the dry grinding plant, where the principal power will be absorbed. The total horse-power taken to run mills of this description with the output mentioned would be approximately 2,000 to 2,500 horse-power. This entails a complete electric power-station and boiler-house, and my firm have designed it to contain water-tube boilers, with the usual auxiliary machinery, and in the power-house three turbines of 1,000 to 1,500 km, capacity each. Greut care has to be taken in designing the drives for the mills, as they are exceedingly heavy.

Mr. J. E. Hattersley, sn.veyor to the Sazmundham Urban District Council, has been appointed borough surveyor of Buckingham, at a salary of £150 a year,

At Foleshill Rural District Council meeting on Thursday it was stated that a committee had had before them plans of 600 houses which it is proposed to erect at Wyken, the dwellings to be for the use of munition makers in Coventry. As the by-laws were not complied with in regard to drainage and the width of some of the thoroughfares the plans were reterred back. The plans provide for several classes of houses.

A chapel has been built, at a cost of £500, in connection with the 4th Northern General Hospital on the Wragby road at Lincoln. The chapel is timber built, with galvanised iron frame, lined with matchboard. There is a small chancel, and a make 63 ft. long by 28 ft. wide, scating 326 people. The chancel has simple oak fittings, and there is in the nave an organ which formerly did service in Bardney church. The new chapel was dedicated on Tuesday last by the Bishop of Lincoln.

completion of houses to the cost of which a Government contribution will be given, further tenders have been invited from those of the builders whose tenders in August last were the lowest, to ascertain the number of addings they were respectively willing to complete by March 31 next; and the comunttee, having considered the new set of proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposal proposa for the provisional acceptance of four tenders for the erection of 356 holdings, consisting of 74 two roomed, 144 three roomed, and four-roomed flats, and 48 self-contained houses, at a total capital cost of £67,487 bs. 10d. The proposal involves a gross increase of £5,602 19s. 11d. The committee will seek the authority of the Council to apportion the work among the builders specified as may prove most desirable, subject only to the total contract price of £67,487 not being exceeded, and to the total accommodation not being substantially reduced. The committee recommend the Council to instruct the Town Clerk to apply to the Local Government Board for surction to borrow such capital moneys incollental to the carrying into effect of the present proposal as are not provided from Imp rial sources, and that, subject to contracts being approved by the Town Clerk, and the sauctions of the Local Government Board, tenders to the amount of £67,487 5s. 10d, with the builders named be accepted The report was adopted by the Corporation

on Monday.

---LEGAL INTELLIGENCE.

ALDERMAN AND EX-BOROUGH SURALDERMAN AND EX-BOROUGH SURAEYOR FINED.—The first case of its kind came before Mr. Justice Lawrence at the Kent
Assizes on Thesday in last week, when William
Ellas, J.P., an alderman of the New
Romney Town Council, and a builder by trade,
and Albert Edward Hayward, consulting surveyor to that corporation, pleaded guilty to an
indictment charging them with conspiring
together to contravene the provisions of the
Manicipality Corporations Act, 1832, Section
12, at New Romney.—Mr. Bolkin, who appeared for the presecution, said the two de
tendants were men of position, Mr. Ellis being
a Justice of the Peace for New Romney and an
alderman of the borough conneil, and Mr.
Hayward having for many vears been the
borough surveyor of New Romney. From this
office he retired a short time ago, but was
retained in the office of consulting surveyor to
the borough. Mr. Ellis traded in partner-hip
with his brother. George Ellis, as builders, contractors and troumengers, with two branches,
one at Rye, which Mt. George Ellis superintended, and the other at New Romney, which
was under the charge of the defendant. Ar.
William Ellis. The firm employed at Rye a
clerk named C. A. Gefford, while the New
Romney leanch employed a clerk named Huggett. In September 1912, some work had to
be done to a street at New Romney under the
superintendence of the defendant Hayward.
In the course of that job it was found that
cort in iron paping and other iron work was
needed to carry it out, and in order that that
material should be obtained Mr. Hayward saw
at the spic where the work was taking place,
the two bustlers. William and George Ellis, ALDERMAN AND EX-BOROUGH SURVEYOR FINED.—The first case of its kind material should be obtained Mr. Hayward saw at the spie where the work was taking place, the two brothers. William and George Ellis, and asked them if they could supply the material. They replied that they could get it, but that as William Ellis was a member of the town conneil they could not supply the corporation. So they knew perfectly well the disabilities referred to in the Act. Mr. Hayward attenwards said to the brothers. "Well, supply it through one of your clerks," and that was done. The cost of the goods was £5.11s. 4d.—It was not till January, 1914, however, that the account was rendered to the Ev 11s 4d. It was not till January, 1914, however, that the account was rendered to the van conneil. In one count of the account in question was written "Correct A. E. H." all chaws proved to be Mr. Hayward's handwriting and this also "New Romney Correct, V. S. J. W. J. Commonwer," The KER ON TYNE
Committee of Newcastae and a leave presented of training a teach of the creetion of diverging the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the following the fol

from the books of the firm of Ellis Bros, which were kept at Rye by Mr. Gafford. About November last year another account was reinfered to the town coincil for some air barrels which were required by them. The account was "Mr. A. E. Hayward, surveyor, to C. A. Gafford, care of Ellis Bros, 12 barrels, £2 14s." The body of that account was in the handwriting of Mr. Huggett, who had since joined the Army ind been reported missing for several montas. The words and initials "Correct, A. E. H." were those of Mr. Hayward, and the account was dealt with in the same way as the other one, by being from the books of the firm of Ellis Bros. Mr. Hayward, and the account was deaft with in the same way as the other one, by being put before the council and passed. After the matter had come to light Mr. Hayward was questioned by the town clerk, and denied knowing Gafford or having had any dealings with lam, but he schoitful luncing a lawyal king. with him, but he admitted buying a barrel himself from Mr. Ellis, because the latter could not supply it, being a member of the council. Mr. Gafford was a guardian of the Rye Union, and he happened to see a printed statement of the New Ronney Council's accounts for the year to March, 1914. He saw his name underlined in red, "C. A. Gafford," and was naturally puzzled, but assumed that his name had been used. He gave a strong verbal protest to Mr. George Ellis at Rye and wrote a protest to Mr. Wim. Elhs, the defendant, telling him he ought not to have used his name under with him, but he admitted buying a barrel himprotest to Att. Win. Lans, the accentiant, tening him he ought not to have used his name under the circumstances. Mr. Ellis did not answer that letter. For the corresponding period of the present year Mr. Gafford saw the printed the present year Mr. Gafford saw the printed the corresponding to the content of the present year Mr. Gafford saw the printed the corresponding to the content of the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding to the corresponding the circumstances. Mr. Ellis did not answer that letter. For the corresponding period of the present year Mr. Gafford saw the printed account as to the tar birrels, £2 14s., and then wrote to the town clerk. The town clerk mentioned it to the then mayor (Mr. Maude), and upon that Mr. Ellis, the defendant, was asked to come to the town hall, where he was interviewed by the mayor in the presence of the town clerk. That was only with regard to the supply of bartels. Mr. Ellis's story at first was that it was Huggett's affair, that he (Huggett) made out the account and signed the cheque, and he, he believed, endorsed the cheque. Arr. Ellis afterwards, however, said he had made a mistake and admitted that he himself had endorsed the cheque. At the next meeting of the council the matter was discussed. A small committee was appointed to deal with it, and that committee reported that it was improper for the two defendants to have done what they did. Mr. Ellis at the meeting, took up the attitude that he had a right to sign in any name he liked a cheque which was really due to him, although the mame of the payee was not his own name. As Mr. Ellis still maintained that he was perfectly right in what he did and desired to retain his seat on the council, the Mayor had no option but to communicate with the Local Government Board on the subject. The Board sent all the papers to the Director of Public Prosecutions, and a prosecution was the result. Mr. Bodkin added that the prosecution was commenced for the numbers of corporations could not, without risk of prosecution, enter into trading arrangements with officials or others connected with those corporations, and then sit and pass payments to themselves under assumed names. Counsel rided that he had been informed that since Mr. Gafford gave evidence at New Rommey his services had been dispensed with by the firm of Ellis Brothers.—Mr. Huntly Jenkins, who represented the defendants, addressed the Court on their behalf, stating that Mr. Hayward was now seventy-eight years of ag Court on their behalf, stating that Mr. Hayward was now seventy-eight years of age, and argued that there had been no dishonesty about the metter and no intention to defraud.—His Lordship: I appreciate and am quite ready to accept all you say with regard to there being no fraud and no intention to defraud. But I do not understand the dismissal of Mr. Gafford.—Mr. Huntly Jenk'ns, having consulted the solicitor for the defence. dismissal of Mr. Gafford.—Mr. Huntly Jenk'ns, having consulted the solicitor for the defence, stated that the dismissal of Mr. Gafford had been done by defendant's brother, Mr. George Ellis.—His Lordship, in passing sentence, said it was of vital importance and a first principle, that elected bodies should recognise that they could not be upon both sides of a business transaction at the same time—that was to say, they could not be members of the contracting body, or corporation contracting and also con-tractors with that body. Apart from the statute, it was also clear that a person could not be on both sides of a transaction while his duty was to protect the public and to see that the very best was obtained for the public Therefore, while it was clear there was no Therefore, while it was clear there was ne fraud in this case in the grosser sense of fraud that was to say, the goods were not being that was to say, the goods were not being that was to say, the goods were not being the company when or an under profit

sidd at an improper value or an undue profit being made, or anything of that sort—still there was a clear violation of the statute, con-sciously made and pursued by deception and secrecy. The ugliest part of the whole thing.

to his (the judge's) mind, was the use of Mr. Gafford's name and now subsequently the discharge of the man. He really failed to inderstand how they could have the andacity to treat it as a wrongful act on the part of Mr. Gafford—his protest against what was done—and to allow him to lose his employment. He thought that indicated a perversion of their sense of justice which was distinctly painful. He did not desire to punish defendants' conduct unduly, but the law must not be violated with impunity, and, therefore, Mr. Ellis must be fined £25 and Mr. Hayward the sum of £5, and the costs of the prosecution must be paid in equal parts by them.—Time for payment was granted.

A TEWKESBURY BUILDER'S ESTATE -In the Probate Division, on November 30 the action of Godfrey v. Godfrey and Others which concerned the estate, valued at about £160,000, together with a business, of the late Mr Francis William Godfrey, builder and contractor, of Tewkesbury, came before Mr. Justice Horridge. The testator died in April. 1912, and the action related to a codicil dated April 4, 1912. In announcing that the parties April 4, 1912. In announcing that the parties had settled the action, Mr. J. H. Campbell, K.C., said the plaintiff was Mr. Harold Godfrey, the eldest son of the deceased. The defendants included the widow of the testator, and another surviving son, and trustees and and anomer surviving son, and trustees and executors under the will. There was also an intervener interested in a legacy of £200 which, under the codicil in quistion, was charged to an annuity of £100. Counsel added that he (on behalf of two of the defendants) had discussed the matter with Sir Edward had discussed the matter with Sir Edward Carson, K.C. (who represented the plaintiff), and Mr. Hume Williams, K.C. (who appeared for the widow), and a settlement had been reached. The deceased, by his will of 1903, subject to a provision for the wife, divided his property between his two sons, Harold and Francis, who assisted him in his business. In March, 1907, another will was made which was not contested in the present proceedings. By this later will be revoked the bequests to his eldest son, Harold, and made the second son, Francis, residuary legatee, leaving him practriancis, resutury legates, leaving him practically the entire estate, subject to provision for the widow, the step-mother of the plaintiff. Trouble, however, arose out of a clause which gave the trustees power to make such provision gave the trustees power to make such provision as they thought fit for the eldest son. After a codicil of April 1, 1912, testator made another on April 4, 1912, the effect of which was to appoint a third trustee, Mr. Shanaban, the assistant secretary to the Dublin Board of Works, and a lifelong friend of the testator and his family. Under the codicil there was power for the majority of the trustees to determine any question that might arise, and it was in respect of the provision for the eldest in respect of the provision for the eldest that differences developed. The wider son that differences developed. The wider took one view and the other trustees the other. By the arrangement now made substantial provision was made for the eldest son, who now discharged all the claims against the estate. In the circumstances the Court was asked to pronounce in favour of the will and the two codicils, the terms arranged to be made a rule of Court. Sir Edward Carson concurred in the statement as to the sottlement between the parties. The codicil which had caused the differences was made by deceased the day before he died. April 5. Proper procaused the differences was made by deceased the day before he died. April 5. Proper provision would now be made for the son. Harold, and funds invested for his benefit and that of his child. Mr. Hume Williams said the desire of the widow all along had been to carry out what she thought were her husband's wishes. After evidence, his Lordship pronounced for the second will and codicil

APPEAL AS TO DEFECTIVE STREET GULLY.—PAPWORTH v. BATTERSEA for Court of Appeal on Monday Lords Justices Pickford and Bankes and Mr. Justice Neville gave judgment in the appeal by the plaintiff. Miss Amy Papworth, asking for judgment or a new trial in an action which was twice tried, in which she claimed damages for personal injuries alleged to have been sustained on June 26. 1912, owing to her riding her machine over a defective surface gully in the Lombard Road. Battersea, which caused her to be thrown off into the road, where she was run over by a passing carriage. The original trial was before Mr. Justice Horridge and a common jury, as reported in our issue of November 13, 1914, p. 637, Vol. CVH. The jury answered a series of questions and awarded the plaintiff £1,961. On further consideration the Judge held the plaintiff was entitled to succeed, and entered judgment in her favour. The Court of Appeal set that judgment aside, and ordered a new trial on various grounds. The second trial (reported in our number for February 26, 1915,

p. 258, last volume), was b fore Mr. Justice Scrutton and a special jury. The jury found that the surface guilty, which had been put in by the predicessors of the detendants, the Wandsworth Board of Works, had all along been defective and dangerous, but that the defendants, at the time of the accilent, did not know, and could not by the exercise of reasonsable care have known, of the defect in the guilty. In the event of the plaintiff being entitled to damages they awarded her £755. Mr. Justice Scrutton, after hearing arguments, held that the action failed because the plaintiff had not established any misfeasance on the part of the defendants.—The plaintiff now applied for judgment or a new trial, and contended that judgment should have been entered for her in accordance with the verdict.—Mr. Greer, K.C., and Mr. Sidney H. Lamb, instructed by Mossis, W. W. Young, Son, and Ward, appeared for the plaintiff, Mr. Lewis Thomas, K.C., and Mr. W. R. Warren, instructed by Mr. P. Caudwell, for the Borough Council.—The case having been argued, the Court gave judgment distnissing the appeal, holding that as there was no negligence by the defendants or their predecessors in title in the construction of the gully in 1882, or in not observing that the gully had become dangerous, they were not liable to the plaintiff.

LANDLORD'S LAABILITY TO KEEP ROOFS IN REPAIR.—HART'S EXECUTORS v. ROGERS.—In this action, heard by Mr. Justice Scrutten without a jury, considered judgment was given on Thursday. The plaintiffs claimed £115 9s. 6d., two quarters rent of a suite of furnished rooms at Moscow Mansions, Kensington, and for £20 agreed to be paid for dilapidations at the end of the tenancy. The defendant alleged that, owing to the landlord's neglect to repair the roof, water came through into the flat and rendered it unfit for human habitation, and that because of this the defendant's wife became ill and he had to find another house. He also counterclaimed for damages in respect of his wife's illness. Mr. Distarnal, K.C., and Mr. Morle appeared for the plaintiffs: and Mr. Rose-Innes K.C., and Mr. F. Dodd for the defendant.—Mr. Justice Scrutton, in his judgment, said it was clear that the defect which caused the damage in this case was not in a part of the roof included in the denise. What was the legal obligation imposed on the landlord in respect of the roof? Ordinarily the Mansions, Kensington, and for £20 agreed to was the legal obligation imposed on the land-lord in respect of the roof? Ordinarily the lessor of an unfurnished house did not im-pliedly warrant that it is fit for occupation, and the lessor of a furnished house or apart-ments did impliedly warrant that it was fit for human occupation at the beginning of the tenancy. The Divisional Court in "Hargroves v. Hartopp" (1905) held that such a landlord was at less tander a duty to was reasonable for human occupation at the beginning of the tenancy. The Divisional Court in "Hargroves v. Hartopp" (1905) held that such a landlord was at least under a duty to use reasonable care to keep the roof in repair, following Baron Martin in "Carstairs v. Taylor," Lord Alverstone suggested that in "Miller v. Hancock" (1893) the Court went further, and treated of a landlord who reserved the control of a staircase as an absolute duty to keep the premises in a safe condition at all events. In this case of "Miller v. Hancock" the real question was the liability of the landlord to a visitor of the tenant; but, said Mr. Justice Scrutton, as he pointed out in "Hungott v. Miers" (1908) and in "Hargroves v. Hartopp," the Court approached the natter through the legal relation of landlord and tenant. Lord Alverstone, in the last-named case of "Hargroves v. Hartopp," took the same view, Mr. Justice Atkin in "Lucy v. Bawden" (1904) came to the conclusion that the decision in "Miller v. Hancock" must be limited to the liability for trans as explained in "Indermant v. Dames." The defect, which the jury found in "Ency v. Bawden," was the absence of a fence or rail, which was a defect that anyone could see, In "Miller v. Hancock," as reported. found in "Lacy v. Bawden." was the absence of a fence or rail, which was a defect that anyone could see, In "Miller v. Hancock." as reported, all the judges intested an absolute duty to repair on the landlord. Having dealt in detail with the facts of the present case, his Lordship said he came to the conclusion that the illness of defendant's wife did not result from any section of the land of the legal. negligence on the part of plaintiff. The lega result was that he was unable to see any prin

£114–13s, 6d. As to the defendant's counterclaim, ne was not satisfied that the wife's illness was caused by the leakage, bit allowing defendant the cost of substituted rooms, he awarded hun in all £25 damages on the counter-drim, with costs. If the trae view of the relation of this landlord and tenant was hat the landlord only contracted to use reasonable care to keep the roof in repair, ne found no neighbories in this case, and, on that construction, the plaintiff would have judgment on the counter claim, with costs.

SPHALFIELDS MARKET ARBITRATION Mr. C. A. Russell, K.C., has given his decision, as arbitrator, in the case in which Mr. Robert Horner claimed £650,001 from the City Corporation for the acquisition of his leasehold interest in Spitalfields Market, and certain private property surrounding it. At the hearings held at the Survevers' Institution in October last evidence on behalf of Mr. Horner was given by Mr. Daniel Watney, Mr. J. Seagram Richardson, Mr. W. P. Ryan, Mr. P. A. Mence, Mr. Howard Martin, and by Sir Mexander R. Steining, Mr. F. W. Pixley, Mr. Lesla, R. Vigers, Mr. Howard Chatfold Clarke, Mr. Sydney Perks, F.S.A. [City surveyor), Mr. W. S. Walker, and others for the Corporation. The latter witnesses valued Mr. Horner's interests at not more than from £173,000 to £200,000. Mr. Horner claimed £600,000. Mr. Russell has decided that Mr. Horner is entitled to receive £316,500. At the meeting of the City Solicitor, that Mr. Horner had been awarded £234,500. Sir Homewood Crawford explains that this announcement was quite correct. The total of £316,500 which Mr. Horner will ultimately receive includes an agreed sum of £32,000 in respect of certain outside properties for which Mr. Horner originally claimed £50,000. This claim was not investigated by the arbitrator, although, by mutual consent, the £32,000 appears in the award as a separate item.

TEST CASE AS TO INCREASED RAIL-WAY RATES.—THE ASSOCIATED PORTLAND CEMENT MANUFACTURERS (1900). LIMITED, v. GREAT NORTHERN RAILWAY COMPANY.—Mr. Justice Losh, the Hon, A. E. Gathorne-Hardy, and Sir J: mes Woodhouse heard on four drys of last week, and reserved judgment at the close of the legal arguments on Thursday, in the application of the Associated Portland Cennent Manufacturers (1900). Limited, for a revision of the nucreased goods rates charged by the Grent Northern Railway Company to meet the cost of the concessions granted to their employees in accordance with the terms of the settlement of the railway strike of 1911. The applicants complained that the increased charge of 4 per cent, for the carriage of goods from their works to different parts of the railway company's system, under the special Act obtained by the various railway companies in 1915, was unneasonable and excessive. They said that the £153,393, which the railway company pur forward as their additional expenditure in respect of wages, had not been properly apported a between the passenger and the different classes of goods traffic, and that, having regard to the volume of traffic in 1913 as compared with that of 1911, there had been no rise in the cost of working the railway within the meaning of the Act of 1913. The respondents contend d that the additional expenditure in respect of wages imposed by the terms of the settlement of the strike had been properly apportioned between the different classes of traffic, and that the amount justified an extra charge of 4 per cent, on goods of the character forwarded by the applicants,—Mr. Rowkand Whitehead, K.C., Mr. Holman Gregory, K.C., and Mr. Edwin Clements appeared for the applicants, and Mr. G. J. Talbot, K.C., Mr. Macassey, K.C., and Mr. W. Bruce Thomas for the respondents,—At the conclusion of the evidence and the addresses of the coursel, the Court reserved judgment.

The Boroug r Conneil of Poedar is received the sanction of the Lord Government Board to a loan of £3.693 for electric cable extensions.

At the Edinburgh Dean of Guild Court, on Thursday, Lord Dean of Guild Macmtyre Henry presiding, a warrant was granted to Bertrams, Limited, for the erection of a pattern making shop and pattern store at Sciennes. This is to be a four-story building, 100 ft, by 49 ft., with a frontage of stone. The façade will be treated in such a manner as to maintain the amenity of the district. Bailie David M'Arthy, Lic.R.I.B.A., Frederick Street, Edinburgh, is the architect.

1.1 proposed lessee in this case has given of his time since war broke out service of the State, raising three battalions of infantry and reserves, nearly five thousand men, has contributed largely in time and money to national purposes of the war, has two sons, officers (whose patrimony is involved), in the New Army, and, notwithstanding, is to be shot at and penalised by the old ground leasing law which takes no account of war conditions, but leaves the ground landlord in position to exact the last

Smiling, notwithstanding the wir.
The State cannot have it both ways, take The the land der's men, money, and materials, but still expect a builder to fulfil contracts, or tested consequences of non-fulfilment, not withstending that the State has made it impossible. The remedy is to give the opporunity of fair and equitable relief, and as the Defence of the Realm Act does not seem to fully apply, an extension of the powers of that Act, or another similar Act, to apply should be passed, to deal with undoubtedly numerous similar and other cases of contract difficulties occasioned by the war.

Howers, J. Williams, J.P., L.C.C., H. Bermondsey Street, London Bridge, S.E.

# \_\_\_\_ OBITUARY

We regret to aunounce the death, suddenly, of heart disease, on November 23, of Mr. Mark Fawcett, one of the directors of the Fawcett Faxcett, one of the directors of the Fawcett Construction Co., Limited, of 47, Victoria Street, S.W., at the age of fifty-five, at Hampton Wick, where he had resided for many years, indulging in his favourite pastime of sculling. Born at Lincoln in 1860, he was apprenticed in 1875 to Mr. W. D. Harrison, of Lincoln, and for four years worked at the bench. In 1879 he was articled to Messrs, feelbany and Harding, architects, of Lincoln, and on the completion of his articles he and on the completion of his articles he assisted Mr. J. Thorpe for some time in connection with main drainage and water supply work at King's Lynn and Horncastle. He came to London in 1882, and entered the office of Mr. J. Douglass Mathews, F.R.I.B.A., remaining with him till 1887, when he commenced practice on his own account. He began then to experiment with improvements in the construction of fireproof floors, and in m the construction of hrephod mores, and in March. 1899, took into partnership his old friend and colleague, Mr. Brett A. Elphicke. The demand for the Fawcett Construction system rapidly grew, and in our issue of fuly 25, 1899, when we gave a portrait and biography of Mr. Fawcett, we were able to record a substantial list of important buildings the state of the construction. ings where it had been used Later on the firm developed into the Fawcett Construction Co., Limited, with Mr. Fawcett and Mr. Elphicke as managing directors, and year by year our pages have recorded the many contracts in connection with which the system tracts in connection with which the system has been adopted. Among the latest of these are the extension of Messis. Lambert and Butler's factory in Drury Lane and the extensive alterations and additions to Freemasons' Hall. Mr. Fawcett was buried at Norbiton Cemetery. He leaves a wife, two sons, and three daughters. His eldest son, John, holds a commission in the Royal Engineers in Judic and his second son has instringers in Judic and his second son has instringers in Judic and his second son has instringers. gineers, in India, and his second son has just obtained his certificate as an aerial pilot at Hendon. The surviving managing director of Hendon. The surviving managing our even of the company, Mr. Brett A. Elphicke, who has been responsible for the active part of the business during the last few years, will remain as sole managing director. There will, therefore, be no change in the management of the company, whose business will continue to be carried on as in the past at 47, Victoria Street, Westminster, S.W.

After a long illness, the death is amounted of Mr. Arthur Byrne Hudson, at the age of 76. He was born at 19, Bennet's Hill, E.C., on February 10, 1546, the son of a member of on F-branzy 10, 17.4%, the son of a member of the Vinthers' Company, and surveyor to the Saldiers Company. His education finished, he entered his father's office, his father then taking no partnership Mr. Booth, and the trin becoming a little later Hudson, Son, and Booth. He entered the Court of Common Frails. Booth. He entered the Court of Common and it bears it bears of the Commission of Sewers, and a number of the Commission of Sewers, and off his served as chirman of the Streets Committee of that body. Later he was chairman of the Mansion House Underground Station.

Bridge House Estates Committee. Mr Hud-Bridge House Estates Committee. Mr. Hud-son served the office of Prime Warden of the Saddlers Company. At Richmond, where he resided, he was the hon, secretary and treasurer of the Fire Brigade, and was also a commissioned officer in the Surrey Rifles.

The death occurred at Silloth, on Friday, at the age of 61, of Mr. John Walton Taylor, a well-known architect in Newcastie-on-Tyne, Mr. Taylor was born in May, 1854, and spent his boyhood and youth in Bishop Auckland, and in 1881 began as an architect in Newcastle. During the past year ill-health had affected Mr. Taylor severely, and at the time of his death he was staying at Silloth, where he had gone in the hope of recuperating. Mr. Tayfor was architect for the Y.M.C.A. building
In Blackett Street; the Soldiers' Home, in
Hunter's R ad; the Dilston Road Wesleyan
Uhapel: Messis, Bainbridge and Company's
extensions and turniture depository, all in
Newcastle, and a large number of churches
and Synday schools in the counties of and Sunday-schools in the counties of Northumberland and Durham. He was a past president of the Northern Architectural Assoiation, and had been a Fellow of the Royal Institute of British Architects since 1892, and a Fellow of the Surveyors' Institution since February, 1887. The Society of Friends knew Mr. Taylor as a valued and prominent member; he taught in the Sunday-school for thirty years, hesides helping in all the work of that institution. The deceased leaves a widow, two sons, and two daughters, the elder son having been a partner with his father. The interment took place on Menday afternoon at St. An-drew's Cemetery, Newcastle.

The deaths are announced of Mr. George The deaths are amounced of Mr. George Alexander Kay, A.R.I.B.A., Second Lientenant, Sherwood Foresters, of Finchley, killed in action at Hooge, and of Mr. Edward Herbert Gibson, A.R.I.B.A., Lieutenant, Royal Naval Volunteer Reserve. Lieut. Gibson, who was 27, was severely wounded at the Dardanelles on October 23, and died two days later. He was the youngest son of Dr. Gibson, of B-ech Grove, Harrogate. After leaving school he studied for one year in the Engineering and Art Departments of Leeds University, and for one year at the Leeds School of Arl He served his articles with Messrs, Cannon and Chorley, of Leeds, and remained with them for two years as assistant. He was afterwards in the office of the late Mr. John Oldrid Scott, of Westminster. In 1914, while with Mr. Scott, one of his drawings was exhibited at the Royal Academy. On the outbreak of war he joined the R.N.V.R., and in February was appointed sub-lieutenant. being sent down to the cump at Blandford with 160 men to prepare roads. He went to the Dardanelles in June, and was gazetted lieutenant from October 18.

Mr. John Elv, F.R.I.B.A., of King Street West, Manchester, died on Friday last, aged 67 years. He was the third son of the late George R Ely. M.D., of Rochester, and had been a Fellow of the Royal Institute of British Architects since 1883, and had served upon the Council. He was a past president and former hon, secretary of the Manchester Incorporated Society of Architects, and was at the time of his death a member of council of

Calians Presbyterian Church, Ballybay, has Calains Pre-styletian Churea, Ganybay, assertently been reopened after undergoing extensive improvements and renovations. Mr-David R. Drum, The Diamond, Monaghan, was the contractor, and Mr. Harry Skelton, C.E., Market Street, Monaghan, the architecture.

C.E., Market Street, Monaghan, the architect-Extensions to the Girls Industrial Home, Ipswich, which have been opened by the Bishop of St. Edmundsbury and Ipswich, com-prise an entrance hall, with matron's office, beard-room, staff-room, store-room, class and sewing-room, schoolroom, three dormitories, staff badrooms and bath-room with four baths. Mr. Henry J. Weight, M.S.A. of Museum Street Ipswich, is the architect.

By permission of the Rev. Preb. Reynolds the meeting of St Paul's Ecclesiological Society is to be held on Wednesday in next week, the 15th inst., when a paper on "Carols" will be read by the Rev. G. R. Wood.

# Currente Calamo.

On the 30th ult, an urgently important question was put by Mr. G. A. Touche, M.P., in the House of Commons, which, with the reply thereto by the Prime Minister, will be found in our Parliamentary Notes on another page. It deals, as will be seen, with a matter of the most vital importance to builders and property owners, which is more fully explained in a communication elsewhere from Mr Howell J. Williams, J.P., L.C.C., which, although posted on November 30, only reached us in the forenoon of Friday last, and, therefore, too late to deal with in our last issue. It will be seen, we regret to say, that, as usual, Mr. Asquith was unable to express an opinion whether it would be deemed desirable to apply the remedy suggested for the gross injustice detailed by Mr. Touche. He has, however, consented to receive a deputation from the London Master Builders' Association, and that body will meet this afternoon to consider the matter. We trust the deputation will be a strong one and that the grievance will be adequately presented; but, remembering the broken promises of the Premier and Mr. Llovd George in the past, we are not sanguine as to the result.

If no redress is obtainable the position is that, as the law now stands, while everybody else is being relieved under the Defence of the Realm Act, or by subsidiary legislation, ground landlords can enforce on a builder a contract taken before the war begnn, under peace conditions, and sue the unfortunate lessee for ground rent, although he is totally unable to build, because the State has taken his men, money, and materials. Surely in such cases as that Mr. Howell Williams outlines, the least that can be asked for is a short Act creating a Court competent to deal promptly with such cases, and to grant postponement of contracts, or such other relief as seems just? If this is denied, ruin stares not a few of us in the face. Moreover, when a builder, at great sacrifice, manages to sustain the burden thrust upon his shoulders, he will for the time fly in the face of and frustrate all the appeals that are being made to us all to economise, and to facilitate the transfer of the services of every ablebodied man to the State that can be spared.

An important case affecting the position of auctioneers came last Thursday before Justices Ridley and Coleridge in the Division i Court, on appeal from a decision by Judge Tindal Atkinson in the Southend-on-Sea County Court. It appeared that on February 26, 1914, a lady named Miss E. H. Hurley, of Westcliff, apprenticed her brother for three years to Mr. G. W. Creaser, auctioneer and estate agent, Leigh-on-Sea. On the outbreak of war the boy asked Mr. Creaser to cancel the deed, but he refused. The boy left, and Mr. Creaser sued Miss Hurley in the county court for £10 due on the deed of apprenticeship. It then came out on the evidence that Mr. Creaser had not taken out his excise licence entitling him to act as an auctioneer 'until six months after the date of the deed of an prenticeship, and this, it was contended, in validated the deed. The county court judge upheld that contention, gave judgment for Miss Hurley, and cancelled the deed. Mr. Creaser appealed, submitting that, though he had not taken out his licence, he was entitled, to practise, and to take an apprentice. The court, without calling on respondent's country country are higher. The relation between the second section of the new water main from the reservoirs on Dartmoor to the town, a distance of eighteen miles, being proceeded with. The name as a whole will cost about £50,000.

sel, dismissed the appeal, with costs, holding that the county court judge's decision was right.

The building of flats is a thorny subject. Many builders have burnt their fingers over the business. Some, indeed, have been burnt up altogether. For flats go in and out of fashion rapidly, rather like big hats. And an empty high-rented flat, with ground rent and mortgage interest running on and up, is a very sieve for losing money. But flats have also proved a dark problem for the lawyers. The recent case of "Hart and Another v. raised some pretty points which are likely to be heard of a good deal in the Courts probably on appeal. The plaintiffs sued for two quarters' rent of a flat in the Cromwell Road, let furnished to the defendant for one year, from March 25, 1914, at a yearly rent of £180, with £20 to pay at the end for dilapidations. The defence was that owing to the roof being in a bad state of repair the place became quite unuhabitable, and so no rent was recoverable, and the defendant further counterclaimed damages for expenses and illness caused to his wife. Mr. Justice Scrutton, after saying that, in law, apart from agreement, there was no warranty that a house was habitable if let unfurnished, but that there was if it were let furnished, found the cases confusing as to flats, which were legally neither. In the end he inclined to hold that there was an absolute duty on the laudlord to keep the roof of the flats in repair. He ruled that the roof was not let with this flat, so here we have the metaphysical mind of the lawyer regarding the roof as a separate entity, and dealing with the flats beneath it as dwellings without any roof. On the view of the absolute duty of the landlord to repair the roof, he found that a breach of this was no answer to his sacred claim for rent. so judgment was for the plaintiff, while, on the counter-claim, allowing nothing for the wife's illness, he gave £25 for expense incurred, with costs. But the Judge also held that if there was no absolute duty on the landlord to repair and only a contract to do so reasonably then, as there was no proof of his negligened the plaintiffs would have judgment also on the counter-claim, with costs. It is now the turn of the Court of Appeal to make what it can of this legal muddle.

Bulletin 47 of the University of Illinois is a valuable contribution to the none-tooplentiful literature concerning the influence of temperature on the attainment of strength of concrete, by Assistant-Professor A. B. McDaniel. It is issued in the United States at fifteen cents, and can be obtained here of Messrs. Chapman and Hall, Ltd., Henrietta Street, W.C. Full tables and diagrams are given of the results of the tests. The general conclusions arrived at are as follows: Under uniform temperature conditions, there was an increase of strength with age within the limits of the tests. For any temperature the rate of increase decreases with the age of the specimen; and this rate of increase is less correspondingly at the lower temperature conditions. For the specimens tested under normal hardening temperature conditions of from 60 to 70° F., the compressive strength of the concrete subjected to a uniform temperature at the ages of seven, fourteen, and twenty-one days may be taken as approximately 50 per cent., 75 per cent., and 90 per cent, of the strength at twenty-eight days, respectively. For

the percentage values at the ages of seven, fourteen, twenty-one, and twenty-eight days is nearly the same for temperature conditions from 30- to 70 F. However, the values for the lower temperatures should be used with caution. Concrete which is maintained at a temperature of 60° to 70° F, will at the age of one week have practically double the strength of the same material which is kept at a temperature of 32° to 40° F. It should be noted that generally in this investigation the specimens were stored under temperatures which were nearly uniform during the whole storage period. In one set the variations in temperature include a number of alternations above and below the freezing point, and the specimens were seriously injured.

The first quarterly issue of the "Journal of the Institute of Arbitrators," published by this newly formed association, the headquarters of which are at 32, Old Jewry, E.C., sets out its aims and objects, and contains many short articles on arbitrations which will interest our readers. Lord Headley is the president of the Institute, and Mr. Henry Adams vice-president. council embraces, among others, Messrs. E. C. P. Monson, the president of the society of architects; Mr. E. J. Sadgrove and Mr. A. Alban H. Scott, vice presidents of that body: Mr. H. D. Searles-Wood, Mr. Max Clarke, and Mr. F. Malcolm Burr. The aim of the Institute, to which we wish all success, is to raise the status of arbitrator to the dignity of a distinct and recognised position as one of the learned professions. The successful achievement of that aim can only be realised by concerted action, by the association of members in the interchange of views, the dissemination of valuable information, and a closer study of those principles and conditions which have to be taken into consideration when dealing with difficult questions arising in the solution of differences and disputes, both in commercial and other relations. The settlement of matters by means of arbitration has received a considerable support from the public, but it has been found that the cost of arbitration has frequently been unnecessarily high, and the economy, looked for by parties in their avoidance of proceedings in the Courts in favour of a less fettered procedure in arbitration, and which the public has been led to expect, has not been realised. Hitherto there has been no special training in the discharge of those quasi-judicial functions which an arbitrator is called upon to exercise; and, although an expert of the highest integrity and experience has been called in to decide a matter in that sphere in which he had, through his profession, acquired a considerable knowledge and experience, difficulties in the construction of written contracts and other documents, the application of the rules of law and equity to the consideration of the matters in reference and other problems of a more or less technical character have arisen, and even in comparatively simple cases these difficulties have to be met by the invocation throughout of legal and other professional assistance, resulting ultimately in the statement of a case for the opinion of the Court. This special training it is one of the Institute's foremost aims to facilitate.

The Local Government Board have intimated to the Torquay Town Council that no further objection will be raised to the work of laying the second section of the new water main from

ARCHITECTURAL ASSOCIATION OF IRELAND.—At a meeting of the Architectural Association of Ireland on November tectural Association of Ireland on November 25, at the rooms, 15, South Frederick Lane, Dublin, Mr. H. G. Leask, President, in the chair, a lecture was given by Professor Steele, M.A., M.R.I.A. his subject being "Some Towns of Northern France Affected by the War." He spoke of the towns first occupied temporarily by the Germans when they invaded France. These were Rouen, Amiens, Beanvais, and some others. No harm was done to these towns, at least no serious harm, and the inhabitants rejoiced at their good luck. Pictures of many of the principal buildings in these towns were shown on the screen. The lecturer then showed scenes from Soissons, Compiegne, Rheims, and other towns which suffered grievously from the bombardment. The lecture was mainly a description of the Gothic cathedrals, the architecture of which was the admiration of The lantern slides showed all beholders. these buildings as they were before the Germans committed havoc upon them, and also as they are to-day, many of them in ruins. A cordial vote of thanks was passed to the lecturer.

RELICS OF ROMAN LONDON.— Mr. Frank Lambert, curator of the Guildhall Museum, in a lecture before the London and Middlesex Archæological Society, given at the Bishopsgate Insti-tute on the 30th ult., stated that on the old Post Office site, St. Martin's-le-Grand, he had found 120 old Roman rubbish pits, from which he had recovered 10,000 fragments of pottery. Many of these fragments he had been able to piece together, and they were now in the Guildhall Museum. One of the most interesting discoveries was a fine gold ring, now in the possession of the Gold-smiths' Company. Other discoveries of Roman pottery had been made in King Wil-liam Street, E.C., where considerable clear-ances had lately been made. Part of the site belonged to the Corporation of London, and the relics found in that particular area had been housed at the Guildhall. On the other part of the site a large building had been erected for the Phoenix Assurance Office, and the company had taken possession of the old Roman remains found underneath, and had placed them in a private collection in the offices. Mr. John Todd, M.S.A., district surveyor for the Eastern Division of the City, the chairman, said that although those valuable relics of Roman civilisation might in law, and to a certain extent in ethics, belong to the company, in a very true sense they be-longed to the public. Every private owner who had a site in the City where relics were found should consider earnestly whether it was not his duty, instead of preserving them in private ownership, to send them to the Guildhall Museum. A vote of thanks was passed to the lecturer on the motion of Dr. William Martin, F.S.A., seconded by Mr. A. C. Knight.

ROMAN MARCHING CAMPSSCOTLAND.—At Edinburgh University, on Tuesday in last week, Mr. George Macdonald, F.B.A., LL.D., delivered a Munro Lecture on "Scotland During the Roman Period." Dr. Macdonald the Roman Period." Dr. Macdonald enumerated the various temporary or marching camps, whose existence has been fairly established. These were described in geographical order, attention being drawn to the points that differented them from native strongholds and justified the conclusion that they were the work, not of the Caledonians, but of the invaders. The Romans had evibut of the invaders. The Romans had evidently crossed the Cheviots near the newdwaters of the Coquet, and marched north-west towards the great landmark of the Eildon. A mile or two to the north of what is now the border one can still distinguish the outline of what seems to have been one of their halting places at Pennymuir or Towford, on the banks of the Kale Water. Eighteen miles further north, hard by the permanent settlement at Newstead, which must be Ptolemy's Trimontium or Town of the Three Peaks, Mr. James Curle discovered another temporary they did his serenc and beautiful outlook on life. Mrs. Webster expounded the art of

mirably situated so as to command the cross ing of the Tweed and the entrance to Lauder date. Fifteen miles beyond this again, on the southern fringe of the Lammermoors, Channelkirk, in the neighbourhood of which the remains of yet a third were observed by Melvill and subsequently planned by Roy. Traces of the Roman invasion are less definite on the west. But remains at Cleghorn, near Lanark, and at Torwood Moor, near Lockerbie, suggest an advance through Annandale and Clydesdale, while yet a third line of attack is indicated by the comparatively wellpreserved temporary camp at Gilnockie, near Canonline. This last must have been con-structed by a force that was detailed to dear with Eskdale. Between the Forth and Alyde isthmus and the southern end of Strathmore there were also temporary camps at Ardoch. and at Grassy Walls on the east bank of the Tay.

the Tay.

THE ART OF THE ITALIAN RENAISSANCE.—In St. Andrew's Hall, Drumshengh Gardens, Edinburgh, Mrs.

The began on Tuesday in last Webster began on Tuesday week a series of three lectures art of the Italian Renaissance. The

on the Kelman, who presided, in introducing the lecturer, said that to the Italy of the past also, with its glorious literature and art, they were immensely indebted, more than many of them could realise, and infinitely more than they could ever pay. To hear that Venice was threatened with destruction by bombs from Zeppelins made them feel in the same way as if they saw a child in a den of ferocious beasts. Mrs. Webster defined art as the language of the emotions-the emotional utterance of life—and craftsmanship as its grammar or tool, and dealt with some or the early Florentine artists. Beginning with Cimabue, she showed how Italian art in the Gothic age advanced from the Byzantine pattern, and how this early Florentine, while not able to shake himself free of tradition, infused the figure with more appearance of life. This was illustrated by lantern pictures on the screen of one of three Madonnas, which were known to be from his hand. His pupil Giotto, whom Cimabue took from tending his sheep, advanced further along the same lines, and surpassed his master as an artisc. Among his chief works were the frescoes in the Church of Assissi, illustrating the legend The devent character of the of St. Francis. art of Fra Angelico was next commented on and in concluding Mrs. Webster gave a short sketch of the life and work of the sculptor Luca Della Robbia-speaking of his versatility as an artist in many materials, as the discoverer of the famous blue enamel Tuscan pottery, the secret of which had been lost; and showing on the screen fragments of the celebrated Cantoria frieze, with the singing angels which he made for the Cathedral, and

which are now in the Museum at Florence. In her second beture delivered on Friday under the chairmanship of Processor G Bald win Brewn, Mrs. Webster dealt with some of the great Florentines and Umbrians of the the lifteenth and the beginning of the sixteenth century. After referring to the Renaissance spirit as reconciling Christian sentiment, which at that time dominated the civilised world, with the imagery, legends, and theories of pagan poetry and philosophy. Mrs. Webster spoke of Botticelli, who made a religion of the study of heanty, and plac d on the screen some of his principal work, and demonstrated in detail how his willowy figures were attractive in their tenderness and Botticelli was the greatest artist in grace. linear design that Europe ever had. Leonardo da Vinci was described as one of the most wonderful organisations that ever existed The complexity of his nature included the gifts of the painter, sculptor, mystic, engineer, and savant. He had been called "the most nniversal genius of all time." Several of the most famous of Leonardo's pictures were

shown on the screen and were individually discussed, especially the "Mona Lisa" of the

Louvre, with its charming personal presence and alluring, wonderful smile. Bernardino

Luini, the most distinguished pupil of Leon-

ardo, cultivated the master's style. His pic-tures were always interesting, reflecting as

Perugino, the teacher of Raphied, with it t inderness and religious feeling materialised in beautiful types. One of his faults was that he frequently repeated hunselt. Dealing with Raphael, Mrs. Webster spoke of him as an "eclectic" who Lorrowed from all the masters that had gone before, and issimihasters that had gone being, and technical lated it by his genius in so marvellones a manner. By a union of all the elements he manner. By a minor of an array was above all others successful in his works in producing a perfect harmony. With a in producing a perfect harmony. With a few words on Sidoma, of the Siema school also a pupil of Leonardo, the lecturer passed Michael Angelo with a consideration of whose genius as painter, architect, and especially as a sculptor, the discourse of the afternoon was brought to a close.

# TRADE NOTES.

Boyle's latest patent "Air-Pump" Ventila-tor has been employed at Messrs. Pears' factory. Brentford.

The business of the London Cabinet and The business of the London Cabinet and Joinery Co., Lyme Grove, N.E. has been acquired by H. H. Elhott, 63, Queen Victoria Street, London, E.C. He is manufacturing all kinds of cabinet and joinery work.

PARLIAMENTARY NOTES.

TRE WAR BUILDING LEASE CONTRACTS. In the House of Commons, on
Wednesday, Mr. Alderman and Sherrif Touche
asked the Prime Munister if he was aware that
builders who, owing to the war, are not able
to command their usual resources in men,
materials, and money, are being required, in
some instances, by ground landlords, to early
out large interware building lease contracts in the out large pre-war building lease contracts in the City of London and elsewhere for which at common law they are hable; that these con-tracts involve financing for large amounts at a time when such financing is against the public interest, and the employment of able bodied men who should be engaged in the service of the State, and, in view of the desire Government to protect all interests, will be consider the question of taking such steps as may be necessary, by legislation or otherwise, to cenable such cases, whether few or many, to be referred to a tribinal empowered to grant rehef by postponement, or as they may determine, in all cases of real hardship. The Prime Minister replied that the subject referred to in the hon, member's question was under the consideration of the Government, but he was not in a position to express any opinion whether it would be deemed desirable to set up such a tribunal as was suggested in the latter part of his question. Mr. Touche further inquired if the Prime Minister would be willing to receive a deputation from the London Master Builders' Association on the subject. The Prime Minister

HOUSING SCHEMES AND THE LOCAL GOVERNMENT BOARD.—In the House of Commons, the President of the Local Government Board has been asked whether he would publish a list of the housing schemes that had been sanctioned since the outbreak of war and of those that had been refused. In reply, Mr. Long said he was afraid that any such list would be misleading, and would scarcely repay the trouble of preparation. Speaking generally, the Department had since March last been forced, owing to the restrictions on expenditure, to take the line that loans for housing and other purposes could not be sanctioned at the present time. An exception had been in the case of munition areas where An exception had been made accommodation was urgently required for the workers, and in some half-dozen cases terms had been arranged under which housing schemes would, he was glad to say, shortly be put in hand.

1NTRFASE OF RENT AND MORTGAGE INTEREST (WAR RESTRICTIONS) BILL.

The Increase of Rent Bill was read a second time in the House of Commons on Wednesday without a division. As the result of representations made by various members during the debate, Mr. Walter Long promised that in Committee he would consider in the most friendly way an amendment for the application of its provision to the country generally, and of its provisions to the country generally, and its one for extending it to more highly its one for extending it to more inguly-rated houses. Replying to various quest are and criticisms, he said the Government had no intention of including ground tents in the Bill. They were a totally different class of property from that with which the Government desired

THE NEW DELIII. Mr. Chamberlain, replying on Thursday to the question by Sir E. Conwall whether it was necessary to spend £267,000 this year on the building of the new Indian capital, said Before the war the mornal expediture on New Delhi was taken at £666,000 a year. In the Budget for the current year provision to the extent of £267,000 only war made, and this was stated to be the lowest ormaint reconical to rany on work actually in amount required to carry on work actually in progress and obviate the deterioration of plant and disbanding of establishment.

At Newn 11, Moll a fave-cell dust destructor, constructed at a cost of £3,330 for buildings and plant, has been formally opened in Tweedy Lane. It was built under the supervision of the Lorough engineer, Mr. II. Tremelling.

→ **→••** 

Messis, F. Lowis and T. Tingle, surveyors to the Louth Rural District Council, have been granted permission to join the colours. The control have agreed that their Army pay shall be made up to their present salary, and their positions kept open

At the Soke of Pererborough County Council At the Soke of Pregrationing County Council to the Pairs of the Pairs of the Wednesday the Main Roads and Bridges Committee reported that after consultation with Mr. W. B. Purser, A.M.J.C.E., they recommended certain works to be carried out at Northborough Nine Bridges at a cost of £200. This was adopted and Mr. Purser's assistance gratefully, acknowledged.

# Our Office Cable.

The head of the angel in the north-west portal The head of the angel in the north-west portal of Rheims Cathedral, widely known as "The Smile of Rheims," which was injured during one of the German bombardments, and was reported to have been sold to Mr. Alfred du Port, of Wilmington, U.S.A., has been found by a priest of the cathedral chapter among the debris, and is now preserved on a bench amid the fragments of shattered wall that represent the former palace of the Arch-bishops. "La Sourire" is much blackened, and a broad slice of stone has been cut from the cheek and forehead. It can, however, readily be replaced, as a cast of the entire figure exists in the Trocadero at Paris. The angel was one of a group on the western anger was one of a group on the western side of the portal representing the fineral of Saint Nicasius, the first Archbishop of Rheims. It is satisfactory to learn that since December last all fragments of stone, glass, and wood have been scrupulously preserved, by order of the French Ministry of Fine Arts, and every item of any significance is stored either in the cathedral or in the annexe of the Archiepiscopal palace.

Writing in the Contract Record on "The Justifiable Outlay on Highways," Mr. Clifford Richardson, of New York, says the greatest enemys of good road construction lies in original economies. The satisfactory nature of any form of road construction is not to be determined by its original cost, but is only demonstrated by the travel which it has carried during the period of its existence and the amount of service obtained from it. slight additional outlay on the construction of a road with the best material will give more than an adequate return in the cost of maintenance during the entire lifetime of the highway. Experience shows danger in road construction is to be found in the following seven errors:—False economies in original design; bad or inferior workmanship; awarding the contract universally to the lowest tenderer; unsatisfactory execution of the work due to lack of intelligent control on the part of supervising engineers; neglect of careful study of individual problems of con-struction and of successful work under similar conditions: the influence of mercenary motives: and neglect of proper maintenance.

The annual report of the 119th session of the Royal Technical College, Glasgow, states that on the outbreak of war, immediately before the opening of last session, the rooms of the building were thrown open to facilitate recruiting, the laboratories with their equipment were placed at the service of the Government and the expert services of members of the staff freely offered for scientific and testing work. The roll of members on service is a creditable record. It comprises eight members of the governing body and of committees, 37 members of the staff, 1,152 students of 1914 and 1915, and 622 students of previous sessions—in all 1,819 Of these, 490 are serving as officers, 351 as non-commissioned officers, 966 as men, one as a nurse, and eleven on special service. Ninety-one of those whose names appear on the roll have already given their lives country's cause, including four members of the staff. Captain Engene Bourdon, B.A. of the French Army, the Director of Studies in the School of Architecture, has received the British Military Cross and also the French Croix de Guerre, and has been gazetted a Knight of the Legion of Honour. The normal work of the college has naturally suffered, there being but 3,028 students this session, against 5,011 in 1913-14, and drastic measures of economy had to be observed In the School of Architecture, maintained by the college and the Glasgow School of Art, three senior course certificates and two junior course certificates awarded

An influential domestion from the Civic Arts Association, including, among others, Mr. George Clausen, R.A., and Mr. John Lavery, A.R.A., waited upon the Lord Mayor at the Mansion House on Friday, to interest him in the aims of the Association. Mr. Edward P. Warren, F.S.A., F.R.I.B.A., who introduced them, said that at the close of the War there would be a great demand for national, regimental, local, and domestic memorials of those who had fallen, and there would be a national reaction in the architectural world after its enforced time of small output. It was of the greatest importance that such memorials should be excellent in both design and workmanship. They might often take the form of public buildings, such as recreation halls, or of small collections of beautiful objects for schools. There was thus a great chance and opportunity of bringing into prominence the advantages of order and beauty and town-planning. Other speakers addressed the Lord Mayor, who, expressing his warm sympathy with the objects of the Association, consented to allow it to hold a public meeting at the Mansion House, under his presidency, on Friday, January 28.

A scheme has been prepared for solving the housing difficulty in the Langley district, near Birmingham, which has become acute through the influx of so many working entergaged upon Government work. It is proposed to develop a freehold estate of about 44 acres, having frontages to Darly Road and Bason's Lane, Langley, and extending to Victoria Road, West Smethwick. The owner of the land has expressed his interest in the scheme, and the promoters have obtained from him an option to purchase the estate upon advantageous terms. The co-operation of the district surveyor has been obtained. There is room on the estate for the erection of over 500 houses of modern design and convenience after allowing spaces for a playing field and allotments. Applications have been received already by the promoters for close upon 100 plots.

The Gwydyr Forest, which extends from Dolgarrog, in the Conway Valley, to Pontst-Pant, in the Lledi Valley, and almost up to Capel Cerrig in another direction, is esti mated to cover an area of about 45,000 acres of mountain slopes, and contains some of the finest timber in the United Kingdom. It is at present the scene of considerable activity. Messrs. Green, timber merchants, who have secured Government contracts for railway sleepers, employ a large number of men, who are engaged in felling the huge trees on the platean adjoining the Park Lake, at an altitude of about 1,500 feet. The Gwydyr mountain here slopes steeply towards the main road to Bettws-y-Coed, and the trunks. denuded of branches, are released on the summit to slide down to the roadside, where a screen of timber has been erected to stem the rush. They are subsequently loaded up in traction and horse waggons and conveyed to the sawmills in the station yard, where they are converted into railway sleepers and despatched by rail en route to their destina-Large areas have already been denuded tion. of timber, which includes a large percentage of oak. Trees gracing the mountain slopes facing the Conway Valley are as yet untouched.

A new mill is to be built at Brighouse from the plans of Mr. E. C. Brooke, architect, Central Chambers, Brighouse.

At a general meeting of the Royal Society of Painters in Water Colours, Mr. H. Hughes-Stenton, A.R.A., was elected a member.

It has been decided by the Board of Agriculture to appoint a committee, armed with somewhat extensive powers, to deal with the whole question of the timber supplies of Great Britain.

At Failsworth on Wednesday Mr. W. O. E. Meade-King held a Local Government Board inquiry into an application by the urban district council for sanction to borrow £1,160 for providing public offices.

At a meeting of the Public Health Committee of the Barking Urban District Council, Mr. C. J. Dawson, F.R.I.B.A. architect to the council, attended and reported upon the application of Messrs. Clement and Co, for a further allowance over and above their contract price for the erection of the second block of fifteen houses in Gascoigne Road, owing to the increased price of materials in consequence of the war. It was resolved that a further and final increase of £10 per house over and above the contract price be allowed the contractors, subject to the architect being satisfied with the contractors' accounts of the increased cost incurred.

#### CHIPS.

The urban district council of Bideford has received the sametion of the Local Government Board to a loan of £3.658 for works in connection with the water supply

Mr. Charles R. Ashbee, F.R.I.B.A., becurred before the Society of the Frac Arts at Washington, D.C., on November 27, his subject being "The Province of the Arts and Crafts."

The Qu'en Princess Marx, and Prince Albert have vested Sn George Frampton's studio to see a statue of her Majest, which has been finished for Dellin. At the same time the Queen saw the model sketch for the Cavill memorial.

M), A. W. Brightmore, an inspector under the Local Government Board, held an inquiry at Whitefield yesterday (Tuesday) into an application by the urban district conneil for sanction to horrow £2,595 for sewerage and sewage disposal works.

Plans for the new Hall of Justice which will be creeted in the Court House block at Sacramento, California, have been formally adopted by the City Commission. Tenders will be received in a short time for the construction of the building, which will cost about \$203,000.

The Mersey Docks and Harbour Board have under consideration a recommendation from the works committee to reconstruct the southerminost section of the shed on the east side of the Darrington Dock (recently destroyed by fire), at an estimated cost of £10.855.

After clong and heated discussion, the Austrian Society of Engineers and Architects has expunged the name of Sir William Rainsay from the fist of its corresponding members. A fourth of those present voted against the motion, and inged that action in the matter should be postponed. We heartily congratulate Sir William Rainsay.

M. R. D. Summerield recently read a paper on "The Inspection of Engineering Material" before the Britishian Association of Engineers. He divided his subject into. The necessity for inspection, the advantage to the buyer, the benefit to the contractor, the abuse of inspection, the inspector and specifications and inspection.

The Rochelale Corporation were informed at their uncetting on Thursday lass that an expert ment with a new invention for the treatment of "sewage sludge" (not sewage) at the borough sewage disposal works is enharrassed by the liquidation of the firm which initiated the work, and the matter is at a standstill.

At the Styal Cottage Homes, belonging to the Manchester Bound of Guardaus, the Besugof Chester has formally dedicated a new chapel. It accommodates 618 children, and has cost £3,000. The work is carried out in a characteristic Cheshire style in brick and half-timber work, with red-tiled root. Mr. F. H. Overmann, of King Street, Marchester, was the architect.

was the architect.

At an inquest held in Sc. Paneras on Saturday on the body of Elizah th Bridle, forty-eight, wife of a builder and decorator, of Aybrook Street, Marylebone, it was stated that on Wednesday evening she and her husband while crossing High Street, Marylebone, were knocked down by a motor-cab. The wheel of the cab passed over the right leg of Mr. Bridle, but his wife sustained a fracture of the skull and internal injuries, from which she died. A verdict of accidental death was returned

verdict of accidental death was returned. An interesting egremony took place at Halifax, Nova Scotia, when the foundation stone of the quay wall of the new ocean terminals was laid by Sir Robert Borden, the Premier of Canada. Eight bassenger steamers of 600 ft, each can be accommodated alongside the quay wall when the present unit is completed. The whole undertaking, however, provides that a fleet of twenty-tom ships, each 600 ft long, can be loaded simultaneously at the piers. The depth of water at low tide alongside the piers will be 45 ft.

At a general assembly of acidemicans and

Ar a general assembly of academicans and associates held on Monday, Mr Charles Sins, A.R.A., painter, was elected a Royal Academician. Mr. Sins, who is in his forty-third year, began to study art at South Kensington at the age of seventeen, and was afterwards a student of the Academic Julian in Paris and at the Royal Academy Schools, His "Childhaod" was bought for the Layembourg in 1900. He first exhibited at Burlington House in 1994. In the Tate Gallery he is represented by "The Fountain" and "The Wood Beyond the World," which were bought by the Chantrey Trustees. He married a daughter of the late Mr. John MacWhitter, R.A.

The death is announced of Mr. John Dolan, late deputy surveyor for Roscommon. Less than thee weeks ago he resigned his position after fifty years' service.

Mr. Beresford Graum Walls, M Inst.C.E.s. late superint edding engineer in the Punjaub, Indian Public Works Department, died on the 25th ult, at his residence in Quesustown, Un-

The corporation of Doneaster have appointed Mr. R. E. Ford as acting borough surveyor and water engineer during the absence of the horough surveyor. Mr. F. O. Kirby, on active service.

We regret to hear that Second Lieut, Ceel B, Fubbs (6th Somerset Light Infantry), the third son of Mr. Percy B, Tubbs, F.R.I.B.A., president of the Society of Architects, Aldersgate Street, E.C., has been wounded in action in Flanders.

The twentieri use of members, licentiates, and students of the Royal Institute of British Architects, published yesterday, who have joined the Army or Navy, gives the total to date of 47 fellows, 365 associates, 188 licentiates, and 234 students.

A picture-drome and concert hall have been built in Chapel Street, Worthing, from plans by Mr. Peter D. Stonham, M.S.A., of Eastbourne and Bexhill. Accommodation's provided in the picture-drome for 1.6° persons and for 1% in the concert hall.

In the course of excavations in connection with the extension of the Stephey Borough Council's electricity generating stution at Limeboure specimens of ancient pottery have been discovered. They are to be placed on exhibition in the Stephey Borough Museum.

The new raccourse stand at Cheltenham is constructed in reinforced concrete, and is 90 ft. in length by a width of 44 ft. On the first floor behind the balcony is a restaurant. The architects were Messrs, Chitters and Smithson, Regent Street, Cheltenham.

At the last sitting of the Carlisle Consistory Court a faculty was granted to the vicar and gardens of St. Cuthbert's Church. Holme Cultram, to erect a tower at the west end of the nave and to carry out several other improvements, including rehanging the hells.

Extensive additions to the county club premises in Phienry Street, Cork, have been compared to the county of the rock has

Extensive additions to the county club premises in Phienix Street, Cork, have been completed at a cost of about £3,000. The work has been executed by Messis, J. D daney and Co., builders, Cork, from plans and specifications prepared by Mr. J. F. McMullen, architect, Cork,

pared by Mr. J. F. McMillen, architect. Cork. The county surveyor of Monaghan, Mr. J. J. Hannigan, reported to his county connell at their last meeting that over £4,900 with of road works would this year be thrown on his hands in consequence of the failure of the rural council and county council to obtain contractors.

At the last meeting of the Stoke-on-Trent education committee the chairman reported that the architect, Mr. Ashworth had joined the forces, and had received a commission as second hentenam in the Royal Garrison Artillery. The assistant architect was appointed in his stead during the continuance of the war

Under the General Powers Bill to be promoted by the corporation of Tynemouth next session further authority is sought with respect to streets, buildings, sewers and drains, infections and other diseases, cleausing of vermicous persons and houses, overcrowding, and removal of persons suffering from pulmonary tuberculosis. It is proposed to add the urban district of Ashington to the corporation's area of water supply, and to acquire the waterworks at Ashington.

The death has taken place at Carnaryon of Mr. John Williams, master builder. A native of Milford Haven, Mr. Williams took up his home at Carnaryon thirty eight years ago, and carried on business with his sens and his brother. He was a skilled woodworker. Though in his eighty-fourth year, he worked regularly at the bench till his health began to fail him some two years ago. Mr. Williams leaves a daughter and four sons.

regularly at the bench till his health began to fail him some two years ago. Mr. Williams leaves a daughter and four sons.

Lord Justice Bankes opened on Thursday the new buildings of the Francis Holland School for thris in Clarence Gite, Regent's Park. Owing to the extension of Baker Street Railway Station the school has been removed from the site it had occurred since 1873. The new premises are faced with small rad bricks. Portland stone being employed for dressings. The floors and stairways are of firsproof construction, and the internal joinery is of whitewood. Mr. Henry T. Hare, F.R.I.B.A., was the architect, and Mr. James Carmichael the builder. The new schools were illustrated in our number for October 16, 1914.

All correspondence should be addressed to the Orderly Room. Drill Herdquarters and Orderly Room, Chester House, Eccleston Place, S.W. Battalion Headquarters, 1s, Fufton Street, Westminster,

December 6, 1915.

A notable addition has been made to the decoration of the Royal Exchange by the unveiling of a fresco painted by Mr. A. E. Cox, R.B.A., and presented by Sir Frederick Green, the subject being "Philip the Good presenting the Uniter to the Merchant Adventurers."

The borough surveyor of King's Lynn has reported to the corporation that a very serious settlement has occurred in the main outside wall on the east side of the Red Mount; he submitted that the restoration of an historic building of this description is the work of an expert. The corporation agreed to at once obtain a report on the building.

Mr. W. W. Gladwell, district surveyor for the East Harling division of Norfolk, has been appointed, temporarily, county surveyor of Norfolk, to fill the vacancy caused by the death of Mr. T. H. B. Heslop, at a salary of £200 a year. Mr. Gladwell has occupied his present post since 1894, and was previously assistant surveyor to the Prestbury Highway. Board, and afterwards to the corporation of Sutton Coldfield.

Board, and afterwards to the corporation of Sutton Coldfield.

At the meeting on Thursday of the Licensing Justices for Birmingham, Mr. Hurst applied on behalf of the London and North-Western Railway Company for alterations to certain plans which were approved by the justices when the provisional grant for the rebuilding of the Queen's Hotel and its extension was made in April, 1912. The scheme originally proposed to be carried through had been rendered impossible for the present. That was a scheme by which a new bridge was to be provided for through traffic through the station, but the necessary capital expenditure for the work had not received the sanction of the authorities. Consequently that part of the scheme would be abandoned until the necessary capital could be secured. The alterations which it was desired the justices should approve were three in number. The chairman asked whether, if they sanctioned this arrangement, it would shut out permanently any chance of making the station a closed one. Mr. H. A. Briggs, the architect said the alteration would not preclude the station being made a closed one in the future a closed one. Mr. H. A. Briggs, the architects said the alteration would not preclude the station being made a closed one in the future Having received this assurance the justices granted the application.

# surate with the occasion, so that the Silver Medal and £30 have not been given. The schemes sent in as a whole tell short of what the President rightly called "Architectonic qualities, which are, of course, indispensable for great decorative designs. Most of the competitors seem to have simply sought to secure a protty pictorial effect. The winner of the Second Silver Medal and \$10, Mr. James Pollard, has paished a titler decorative method, but his vertical composition falls far short of real success, and the ungainly upraised arm of the warrior, of whom a big carbon is shown, goes far to spoil the whole scene, which is rather too theatrical and not sufficiently simple for mural treatment on a big scale such as the size d the cartoon determines. Miss Florence May Asher's scheme, placed proxime accessit, is in some respects preferable, and her full-size nucle female figure has und her tun-size mude remare lighte has uncommon merit, but the riverside scene hardly realises, perhaps. "The Triumph of Peace," and it is not quite conformation. able to true decorative design as a panel for a public building in a technical sense. As a picture, however, we prefer her work, and are not surprised that the judges had to appeal to the President to give his casting vote to settle their divergent opinions concerning these twain.

Both the Silver and Bronz Medals for paintings of the Nude from Life were won by ladies, and both are quite excellent in drawing and charm. The first prize was taken by Miss Florence May Asher. and the second by Miss Murjory Florence Mostyn.

The three competitions for which Silver Medals were offered for an Architectural Design with coloured decoration for one bay of the nave of a big church, an original composition in ornament open to architects only, and an interior perspective drawing of St. St phen's Church. Walliro A, fell through, no one responding. The first Silver Medal also and £15 for an Architectural Design was not awarded. though we ruther funcy this decision was not arrived at till the last moment. The second Silver Medal and £10 for Archi-tectural Design was given to Mr. Daniel Rose Lane (108) for a design of a loggia set betwixt a pair of piazzas, each lead ing to an atrium, with a summer and winter withdrawing room at the ends of The President said that in this countries the building right and left of the there was a tie between two of the works the building right and left of there was a tie between two of the works the building right and left of the submitted, but he had no hesitation in these apartments being hands mely submitted, but he had no hesitation in these apartments being hands mely submitted. The scheme as a whole turally conceived. The scheme as a whole evinces more than common promise. besides showing good taste and refinement

# ROYAL ACADEMY ANNUAL PRIZE DISTRIBUTION.

In the ordinary course of events this year's competitions among the Royal Academy students would have included the Council's gold medals for architecture, painting, and sculpture, but owing to the war and the consequent depletion of the Academy schools it was decided at the outset of the session to withhold these scholarships. This is the first time since the foundation of the Royal Academy 147 years ago that it has been found advisable to suspend these premier contests, but owing to the absence of so considerable a number of the best students with the colours abroad and to other contingent causes, competitions in subjects so advanced as those for the gold medals would not have insured results likely to justify their award. No fewer than 134 of the past and present students on the roll have given up their studies and joined His Majesty's Forces. Among those who have thus gone forth for the defence of hearth and home no fewer than seventynine men were architects, while fifty-live were painters and sculptors. So considerable is the number of architects and sculptors who have left that the Council had no choice but to close the Architectural Schools altogether during the duration of this devastating war, and also to discontinue the day classes in the Modelling School for sculptors. Besides this, ten lady students have sacrificed the profession of their choice and taken up work in hospitals for the Red Cross of at munition making. That this is most creditable to the patriotism of the students of the Royal Academy goes with out saying, and as the President. Sir Edward Poynter, pointed out at the annual meeting last Friday afternoon at Burlington House, it is impossible to over-estimate the seriousness of such a step on the part of those who had their calling at heart in the pursuit and practice of the Arts. The realities of such self-sacrifice have, indeed, been brought home to the ranks of the architectural profession in almost every part of the Empire, and especially among the members of the Institute and the Royal Academy, where the members lately learned that one of their most promising painter students, who won the gold medal in that class, had been killed in action.

The exhibition of competition works this year naturally is comparatively small in extent and less attractive, but the collection of works displayed certainly, considering the conditions, must be described as highly creditable to those who remained at their posts. The lady students, as was

demonstrated, is no new experience, seeing that the women have many times out-distanced the men in work from the life. in figure cartoons, and in painting. The landscape competition for the Creswick Prize (£25 and a silver medal) this year is in evidence, the result being that two ladies come out at the top, though the entries were more than usually numerous, and, on the whole, the works submitted are highly creditable and above the average. The subject is an attractive one, being a homestead, or "rickyard," to use the official term. We entirely end ase Sir Edward Poynter's remarks upon the merit of Miss Sylvia Ellen Gauntlett's winning picture. As he said, Gauntlett's winning picture. it was "not only first in the competition, but the best I have seen during the numeteen years that I have occupied the high position of President. In observa-tion of the true effect of Nature, in the rendering of pure light and transparent shadow, and in study of detail, all of which was carefully given while unobtrusive, and in the quality of the painting simple, but free from pretentiousness of skill which looked clever but meant nothing. This work is worthy of all praise. setting a good example and giving promise of high success in the future." Miss Ura Hook is placed proxime accessit, and in such a connection her work deserves a degree of praise which a mere hon, mention would scarcely imply.

The Turner Gold Medal and £50 scholariship is well won by Mr. Harold Williamson, the subject being "Dawn," and his picture, understood to represent sunrise from Hampstead Heath, is a remarkably fine piece of imaginative painting, with the dark folinge seen, as it were, in silhouette against the glamoni of the rosy dawn, treated, as it must be, more from study of lighting effect than by going direct to Nature. The odd-shaped tree rising towards the front of the scene near the middle of the picture is quaintly handled and almost conventionalised it effect, recalling the ideal of an old master. The author has cleverly set out his work by inserting a black slip round the scene and using a broad, flat. gold frame in an adroit and admirable way which is very different from the expedient of painting in a low key to fit the scale of a dirty old gilt frame often adopted by the so-called "New School." The President said that in this confest the award.

" The Triumph of Peace" was the subject set for the design for the Decoration very much in evidence, though this, as of a Public Building this year, and the as well as study, for the detail is good the competitions for several years have result has certainly not been commentant and not mediocre. # THE SOCIETY OF ARCHITECTS.

The monthly meeting of the Society of Architects was held on Thursday evening at 20. Bedford Square, W.C., the chair term scrip ed by Mr. E. J. Sadgrove, F.R.L.B.A. Size President A nomination for member sup was announced

Major Herbert Freyberg, USI, member, dien fead a paper, cut tied :

### TROM MANSION TO MAISONFILLS,

The expression "mans on" seems to imply a building at once extensive, and certainly is regards management and accommodation one which is now endy. This must be taken to a relative sense and to mean that in this case there are more rooms, more floors, and, drove all, more stars than are necessary ane occupation of the premises by the class of tenant likely to be obtained in the par-cular district. The neighbourhood and its obvantages or the reverse are therefore so anner a dominating factor that unless this s tarry studied to start with, a satisfactory esult can scarcely be hoped for. It has been inted that conversion of houses into maison itis tends to lower the tone of a residential listinct, but surely it is far better to have two small families of good position in a residence rather than the omnam gatherum crowd which usually occupies the average boarding aouse, and that, with a large residence, is often the only alternative.

### THE DISUST OF THE LABOUR TOWN RESIDINCES.

The causes tending towards the disuse of the larger town residence are several, and

(1) The higger staff of servants required, (2) The increasing difficulty in scentring efficient servants and retaining them when secured.

(5) The unlimited hability entailed by strict repairing covenants on the part of the bessee, more particularly as regards struc-tural and external works.

(4) The general to The general shruckage of middle-class meanes coupled with the increased cost of

18 The influence of the ever-present motor-car and the not immatural desire for a bitle place in the country in which to spend week-ends.

As none of these factors are likely to be of less influence in the future than in the past, it follows that the single occupation of the larger town residence is likely to become more and more a negligible quantity. Nursing homes, private hotels, boarding-houses and clubs already exist in numbers greatly in excess of the general requirement and ne increased demand in that direction is either likely or desirable. The occupation of a single residence by more than one household has been tried in my own experience, but only people who can keep their tongues well under ontrol, and can ensure their servants doing the same, should venture on this experiment. The constant self-restraint has a tendency, however, to become irksome and does not add to the restfulness of home life. Few, if any, s dences are constructed so as to adapt their selves without any alteration to this nature of occupancy, and even if the domestic offices ne so arranged, the use of a common stair case, with doors opening directly on to other wople's rooms, does away with privacy and nereases the chances of friction, especially friendly with your neighbour, but don't re-move the hedge," is a nece of advice as applied be now as when it was first given. over three centuries ago, by one who evidently had learned and was therefore deter m and the bright by his own experience. The eed of a domestic ring fence requires no

# CONTINUES AND THITE INFLIFTOR UPON THE CUTTAL ALTERATIONS

Wire, the property has the disadvantage of lems bersehold, the bearing of the covenants and be considered first of all; in most cases treatrend will be both to probibit the alterato the force of the bundang and to prevent the furpose of our paper, he deemed to be two or more separate tenements, and to prevent the furer ises being used other than as "a private dise ing here only." This is a detail which must be dealt with before any alteration is

attempted, or trouble is likely to ensue l'attence, perseverance, and politeness are required in making applications for consents of ground landlords, and the issue of their licence, and, although one cannot grudge the payment of a reasonable professional fee for one does complain services entailed. of time so often wasted before the necessary consent is obtained.

While it seems only right that the freeholder should not be put to any costs in the matter, it does not seem fair that an increase in the amount of the ground rent should be made one of the conditions of the licence. That is only previlent on a few estates-fortunately very few. Of course, if an extension of the term were granted at the same time no one would object. An unfortunate leaseholder often cannot use the property for the purpose for which it was originally intended, owing to conditions over which he has no control, so he should not be charged extra tent for being allowed to adapt the residence to the altered conditions of the surrounding neighbourhood. Another condition which is sometimes insisted on, is an undertaking required from the lessee to reinstate at the if called upon; a condition which, with a trust lease, benefits no one and puts a blot on the title. It is a doubtful advantage for detailed drawings to be embodied in the licence until the works are "completed to the satisfaction of the freeholder's surveyor," since various improvements suggest them-selves as the work proceeds which can be shown on the plan attached, and the record thus made more complete. A freehold generally gives a free hand, but we most of us know the particular instance where this was not the case, but the position and surroundings were exceptional and the grants of the freehold subject to particular covenints. With an ordinary freehold the owner of the fee simple has no one to consult but his own professional adviser, coupled with a study of his neighbour's rights and conveni-

# BUILDING BY-LAWS AND RATEABLE VALUE.

This is a most important matter to deal with, and must be faced at the outset. Under the London Building Act, so long as the suites do not exceed either a given area or are more than two in number with a user in common of the street door, they are not treated as new buildings within the meaning of the Act, which means a considerable saving of might be a big expenditure on making floors and staircases what are called fire-resisting.

Proper means of escape in case of fire are, however, very properly insisted on and are generally easy to provide. In a recent case at a well-known seaside town the contention was raised by the local authority that the alteration of the residence into two maisonettes made them new and separate buildings. but although this general principle was sought to be established, the requisitions made by them were scarcely consistent with that contention. An inquiry as to the principle upon which the particular local anthorities administer the rule as to rateable value before and after alteration is most advisable, as in my experience their practice has varied considerably, and in some cases has not erred on the side of equity. To take a concrete case: a residence which had an original rateable value of £75, so that when it was occupied only produced about £25 in rates, was, after alteration, increased in rateability by the local authority, with the result that nearly £45 per annum was levied on the unfortunate owner. The action of this particular local authority was by no means encouraging; was, indeed, very shortsighted, as while the miconverted houses always had a large percentage of empties, the maisonettes, perly altered, were seldom or ever without an occupant. Owners in this particular borough naturally hesitate before embarking on a scheme where the cream of the revenue taken by the local anthority. The question of cost is a difficult matter upon which to express an abstract opinion, as the outlay for adaption is influenced by many considera tions, the most important one being the original condition of the premises. A rough rule of thumb to apply to the structural altera-tions pure and simple is to calculate that it

will never be less than one-fourth, and it may be as much as one-half of the first cost of the original structure. The necessity for partial or complete reconstruction of the samta tion is a matter which can only be judged by the individual property. In any case this important detail must be rendered above sus picion. Hot water supply will most likely nave to be new throughout, while a system of central heating in some cases will be ro quired as well. Electric light even if already mstalled will have to be separated into two systems, and the same will apply to the gas supply, which is a most important detail both for cooking and heating. A certain number of chimney pieces and stoves with tiled hearths will usually have to be provided, certainly for the reception rooms. The decorations will have to be new throughout and stinting the coats of paint will be found to be false economy, while good wall-papers always attract by giving the finishing touch. One detail which it is almost impossible to be too generous upon is the provision of cupboards, because flats, with which maisonette have to compete, seldom have more than one or say two if the space in which the servants sleep is counted as one.

EXISTING MATERIALS.

In these days of scarcity of timher, every scrap of sound joinery should be preserved and refixed in fresh positions, doors and frames, architraves, windows, panels, skirting-boards, etc., used in again will not only keep down expense, but provide a more seasoned article than stuff newly put together. SOME STRUCTURAL DIFFICULTIES.

The first most important, and certainly the most difficult, is that of the stairs, for hardest task an architect is ever called upon to perform is to alter an old or provide a new staurcase to an existing building. Like everything else in life, the simplest plan is the but inspiration does not always respond best. immediately to invocation. As soon as architect has solved the staircase difficulty the next most important problem is to plan the sanitation, so that, while the Public Health Acts are followed convenience of ar rangement is studied and the whole system so designed that pipes of all descriptions are the fewest as regards numbers and the short est as regards length. In most cases some strengthening will be necessary to the floors. especially of the original bedrooms, which are now to be changed into sitting-rooms, as what is strong enough for a hedroom with its com-paratively light and scanty furniture and certainly few occupants is not necessarily strong enough for a sitting-room with, say, a metal frame piano, book-cases, heavy books, weighty tables and chairs, and, at times, possibly a dozen visitors, the latter a moving weight.

Another matter which may require attention is the conversion of a room into a habitable apartment which before could only be legally used as a store or box-room. Any reasonable outlay in this direction should be a profitable investment where increased accommodation is effected.

ARRANGEMENT OF THE ACCOMMODATION

Where the basement is not too extensive and possesses the advantage of being light and airy, it can be often included in the lower suite, which would then comprise the first. ground, and basement floors. This, however, has the disadvantage of possessing three flights of stairs, but as the suite is entered on the central floor and, by including the first floor, the basement can be given up to the domes tics, it does not so much matter. The plan ning on three floors generally means more domestic service, and therefore, two servants. so one of the advantages of compact planning is at once lost. The best plan of all is no doubt to ignore the basement, or at least the greater part of it for letting purposes; and retain it for a residential caretaker, with provision for central heating and continuous hot water. This arrangement allows the lower suite to be entirely planned on two floors, while the upper suite can be arranged similarly on the same number. The accommoda tion appealing to the larger number of people comprises four bedrooms, bath-room, two w.c. s, two reception rooms, kitchen, senl lery, etc., and in many large houses of five floors, it is possible to get this accommodation contained both in the two lower and two

united floors. utilised, and there must be no dark corners.

CONVENIENCES AND FIFTINGS.

Economy of working must be the watch word, and every detail arranged with this end re view. With central heating and rudiators in the principal rooms, and auxiliary gas stoves, the labour and dirt of hies can be reduced to a minimum. With continuous hot water supply the cumbersome range with its extravagant fire is not required, as a gas cooker is all that is necessary in summer, while the smallest and most economical of grates can be used as an auxiliary in cold weither. Lavatory basins with hot and cold water supplies sive much unnecessary work in bedrooms, and provide are iter convenience. Electric light is so well known as to need no recommen lation. Tradesmen's lifts to the upper suite obviate many difficulties, and they should, if possible, be made accessible from a special back-door entrance. One of the most important features is that the entrance should be impressive, and, therefore, sufficient space must be given up for the outer hall, entered through the street door, and from which the two doors lead to the respective suites. arrangement of the staircase usually has to depend largely upon the original planning of house, but the smaller the interference with existing stairs (providing they are well arranged), the better the effect and the smaller the expenditure. In some cases, how ever, nothing but a clean sweep will give satisfactory results. So many alterations of a residence into so-called maisonettes merely amount to the enclosure of the ground floor stairs, generally by a match-lined partition. with a door at the foot. This is merely divid ing the premises into a couple of tenements, the upper one with three complete sets of stairs, and therefore, having all the disadvantages of a house with none of the conveniences a maisonette, while the lower tenement comprises the ground floor and the basement with inconvenience of arrangement so palpably in evidence, that this suite, which should produce the larger return, is often empty and never commands a renumerative ADVANTAGES OF THE MAISONETIF OVER THE

BIOUSE OR LLAD.

For a very much lower rent the resident can live in a much better neighbourhood than he otherwise would be able to afford, his payments are inclusive, while his liability for repairs is strictly limited and easily calculated. In comparison with flats, the rents are from 50 to 80 per cent. less, the accommodation is not only much better in every way, as nearly, if not all, the rooms have a bright and open outlook, instead of facing a blank wall in a central area, as is the case in so many flats. There is more privacy, as the stairs are in each case used only by the porticular tenant, while, if there is central beating, continuous hot water and a resident carctaker, all the advantages are on the side of the maisonette

# RENTAL RUTURN.

In taking this into account, the price that the existing building would fetch in the open market (not what it originally cost), should be added to the cost of the alterations, and the total treated as capital outlay upon which to reckon the rate of interest returned. The outgoings on a freehold property com

(2) Water rate.(3) Inhalated house duty

(4) Caretaker's remain ration.(5) Find and sindries.

External and structural reports

(7) Insurance

The first two depend on the rateable value. and the rates current in the district, the third upon the amount of gross value. The outlay under 4 and 5 should be calculated and charged to the tenants, while to provide for the sixth item, a certain amount should be put away every year to form a fund available for periodical external repairs. As regards in ternal repairs, the suites should either be redecorated by the tenants on leaving, or an agreed sum paid by them in lieu thereof.

CLASS OF TENANT TO BE CYLERED FOR.

In the properties dealt with, it must be assumed that while the neighbourhood is

Every mich of space must be emmently good and respectable, a fashional ac part of town like Maytair, or even Belgi iv.a. at not alluded to, but rather Kensington, Bayswater or Chelsea, so that the possible tenants, although of fair position, would be of innited means, of incomes from, say, £500 to £700 per annum, a rather numerous class who find each year greater difficulty in get ting comfortally housed than the much subsalised working man with the buildings where rooms are to be rented upon uncommercial The £500 to £700 class have lad their houses pulled down and replaced by mansions, if not palaces, so that small houses in really good positions fetch rents out of all proportion to their real value, and are there probabitive as regards terms and tenure to this class of tenint. In regard to premises already altered and results so far obtained, these carried out as designed by me comprise buildings in various localities, and practically for all sorts and conditions of men, ranging from semi-slum neighbourhoods to a fashionable watering place, and in most cases the two-floor principle has been adhered to, although the working class massonettes were confined to one floor each, while those over shops had to be arranged on three. In all cases the works were carried out in the hest possible manner, and where the owners have been sufficiently far sighted to keep them up to the original standard, the renes have been sustained, but where repairs have been neglected the rents have correspondingly fallen. That applies to all property of a residential class, and is often the reason for the deterioration of a neighbourheod,

### MAISONETTES AS AN INVESTMENT

For purposes of comparison in judging the property from this standpoint, certain points must not be overlooked, viz,

(1) The present market value of the property

(2) The outlay required to jut it into complete structural, sanitary and decorative repair, in order to secure a tenant in one cupation.

(3) The sort of tenant likely to be obsaimed, the amount of rent and conditions as to

an illustration, say, a five-floor residence with some eighteen rooms in a neglected condition, and requiring immediate expenditure of some hundreds to put it into order as a single dwelling, will only realise for the for simple in its present condition, say requires an immediate expendituron structural repairs, new sanitation. hot water, electric light, new decorations, etc., costing, at present rates.

retical, but practice provided. The great drawback to English then some works in asonettes, as compared with those in Con-traction some works in asonettes, as compared with those in Con-traction wiks carried out in contrained. The architect called in to advise on that manner, the hot water a scheme of conversion should have the a scheme of conversion should have the courage to advise the building owner at the first inception to expend a sufficient capital sum and provide adequately for repairs if he would secure satisfactory tenants and avoid deterioration of values.

Mr. Christopher Chart, in seconding the vote of thanks, emphasised the point that the question of neighbourhood should be the dominant factor in determining where it would be prudent, from a financial viewpoint, to convert old property into maisonettes. There was no doubt that the majority of people preferred a self-contained house, even if it cost a little more than a flat. The length remaining of intexpired lease was very imporeven if it cost tant when considering a proposition for con version. Any attempt to bargain with a tating authority as to the assessment to be placed on altered property should be decomaged, as it opened the door to serious abuses. The assessment committee was bound in equity to adopt the rental value as the basis of rateability, but in the case of maisonettes an allowance ought in fairness to maisonettes an allowance ought in ranness to be deducted from rental for such services as caretaker, central heating and lift, which were not obtainable in an ordinary house. He thought it would very seldom be practicable under modern by laws as to heights of rooms to get an add tonal floor into an old house, and the alterations would be so drastic and the sacrifice of existing floors. doors and windows so costly that one would lestate to attempt such a scheme. he believed the conversion would often pay a building owner, the lecturer's figures ap-peared to him to be a little too highly celetared.

Dr. Parkes said that, like Mr. Goldsmith. he had personally inspected some houses at Hove concerted under the lecturer's direction. and would testify to the careful supervision and attention to small details that had been given. II - doubted if a building owner could reasonably expect a return of 7 per cent, with to day's prices: if he made 52 per cent. after altering his premises it would be a satisfactory return. There was no question that the aftered conditions after the war, and the reduced size of families, and the argent need for economising, would render the conversion of existing large houses in such towns

wersion of existing large noises in such covariance as Brighton one of pressing necessity.

Mr. J. P. Williams said he collinorated with Major Freyberg in carrying out a scheme for the Borough Council of Kensingt m, with the best possible results. Their aim was to provide for each working class family housed in flats an independent entrance, staircase, and we also as to provide the privacy desired in a home. The paper was most helpful, for it would enable the owner of out of date property to realise what should be done to make it remunerative. In some districts owners had been discouraged by rating authorities from altering their premises, because of the heavy increase in the assessments

Mr. T. Geoffry Lucas, F.R.L.B.A. did not believe that a house divided into two suites of maisonettes would bear the expense necessitated by providing a caretaker, conheating system, and even a lift, though a four tenancies it would be financially

feasible.

M. Arthur H. Salisbary pointed out that me of the important factors in dealing with property was the provision of a sinking fund by the ewiser Large houses in the inner shoulds of London, such as Islangton and Camberwell, were being deserted by the old class of tenants, who were moving further cut, and it was only possible to let them as they stood as tenement. If the landlord should be the pents and painting he would retain his tenants, but not otherwise. In any conversion it was necessary to keep all drainage and other pipes as short and direct as possible.

agreed time.

The vote of thanks was spoken to by the build conserveral was briefly acknowledged by Major Freyberg.

THE TRADES TRAINING CLASSES

The annual distribution of prizes gained in the classes of the Trades Training Schools of the Worshipful Company of Carpenters, Joiners, Painters and Stainers, Plaisterers, Tylers and Bricklayers, and Wheelwrights, at on Monday evening at Carpenters' Hall, London Wall. Mr. Walter T. Pullein, Master of the Carpenters' Company, presided. The annual report of the schools, read by the Rev. C. Blakesley Bartlett, chairman of the committee, stated that throughout the year their director. Major H. Phillips Fletcher, F.R.I.B.A., had been engaged upon important military duties of observation and draughtsman "somewhere in France" as a member of the Royal Flying Corps under a French pilot, and had been awarded the Croix de la Guerre by the French President. In his enforced absence the work had devolved upon his brother, Mr. Banister F. Fletcher, F.R.I.B.A., to whose tact, skill, and untiring energy they were immensely in debted. Mr. Charles H. Hartwell, the untring energy they were immensely indebted. Mr. Charles H. Hartwell, the instructor in the Life Class, had been elected an Associate of the Royal Academy. He regretted that owing to ill health Mr. S. Moultine had retired from the position of instructor of the Wood Carving Class.

Mr. Banister F. Fletcher, the acting director, gave a detailed report of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the province of the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the work in the wor

There had carried out in the various classes. been a still further diminution in the numbers of students. In spite of the war, however, there were yet 120 students in attendance, all of whom were ineligible for military service, and he considered that the school was still doing a great and useful work, and that it would have been a grave mistake to have sus pended its operations. The output of the session in the various departments had been to provide a very creditable exhibition of handicrafts as applied in various trades to the requirements of the present day.

Sir Thomas G. Jackson, Bart, R.A., in presenting the prizes and certificates to the successful students, observed that he had been greatly interested in seeing the ex-cellent work which the combined City Companies had undertaken during recent years in training youth in the various branches of the building crafts from which these Companies took their names, and of which in the area of the City they formerly had entire control. The other evening he had the privicontrol. control. The other evening he had the privilege of visiting their schools in Great Titch-field Street, and of observing the students engaged in their work. They displayed such energy and industry and had obviously such joy in their tasks that he felt he should have liked to have taken off his coat. and joined them in their occupations. These training schools were essentially modern institutions, and had taken the place of the old apprenticeship system, which he regretted was dead or nearly dead. The technical student of to-day laboured under a very grave disadvantage as compared with the old apprentice, in that whereas the apprentice realised he was doing actual work of ultimate value the student could not ignore the fact that he was merely performing an exercise, and this contrast of outlook made all the difference in the world. The apprentice had a personal responsibility not felt by the youth in a school. The member of a technical class was thus under a disadvantage, and must over come it as far as and as best as he could. The most useful feature of the schools was that they provided continuation classes for those engaged in the classes, and so enabled the men to turn out hetter work, and incidentally to command higher wages. That a workman should have a keen enjoyment in the work he turned out was most important; he could not improve his output nor his position ne could not improve insolupit for his postation unless he had a thorough pleasure in carrying out his task. That sense of enjoyment the technical training classes put within the reach of every ispiring workman, enabling him to bring his brains to bear on the problems on which he had been employed throughout the day, and to apply to them. throughout the day, and to apply to them the higher qualities of taste and imagination. They might say that the bricklayer's task was a very ordinary occupation, but as soon as he dealt with moulded brickwork he became an artist in his way and took a real pleasure in his task. Every step in training a man to the higher qualities of his craft brought with it new interest and pleasure There was one great danger inherent in all technical schools, against which the director and masters needed to continually be on their guard—the risk of stifling the originality of the student. There was a great tendency to persuade the student to follow the master's ways unthinkingly. This manifested itself at South Kensington and at the Royal Academy Schools. The highly trained master was tempted to induce the students to do their work in his way, and not to leave them free to exercise their own individuality. This was quite wrong, and if allowed to exist would destroy the originality of the young men. The master ought to welcome every spark of freshness in a student, and not seek to impress his own individuality upon him. He noted that the schools had suffered, like all other institutions of the kind, very seriously from the effects of the war. Many brave young fellows had felt the call to action, and they would never see some of them again in the schools. They looked They looked forward to welcoming the great majority of the students back, and, when victory was gained, to a long period of peaceful and happy fellowship in their educational

work.
Sir Thomas Jackson then presented the awards in accordance with the following

prize list :

Examination in Carpentry and Joinery (held in London on Jame 30, July 1, 2, and 3, 1915).—J. W. Large—silver medal and first-class certificate (H.M. Forces); G. W. A variety of thanks to Sir T. G. Jackson

A vote of thanks to Sir T. G. Jackson was proposed by Mr. W. Hayward Pitman, past-Master of the Painter-Stainers Com-pany, and seconded by Mr. F. L. Wiginton, Muster of the Joiners Company, and a similar compliment to the Chairman on the motion Mr. John Marsland, Master of the Tylers and Bricklayers' Company, and Mr. F. Costello, Wister of the Plaisterers' Company. concluded the proceedings.

# THE ARCHITECTS' AND SURVEYORS APPROVED SOCIETY.

The annual general meeting of the Archi tects' and Surveyors' Approved Society was held on Tuesday, December 7, 1915, at No. 18, Tufton Street, Westminster, S.W., when Mr. Ernest Newton, P.R.I.B.A. (retiring pre

Air. Ernest Newton, P.R.I.B.A. (retiring president of the society) occupied the chair.

Air. F. R. Yerbury (secretary) gave a statement of the progress and work of the society. Approximately there were, on July 3, 1915, 1,800 members of the society, of whom thinks in work work. whom thirty-six were women. These figures show an increase of 100 during the year.

It will not be possible to ascertain definitely the exact financial position of the society until the official Government valuation has This valuation, which became taken place. This valuation, which became due when the Insurance Act had been in force one when the insurance Act had been in force for three years, will no doubt take place shortly, and the committee confidently anti-cipates that an extremely satisfactory state of affairs will be revealed. In the meantime, the society has investments to its credit amounting to £2.140, £700 of which consists of new Government 4t per cent. War Loan Stock.

The claims paid by the society during the ear have been as follows :- Men : Sickness laims, 96: maternity claims, 48; disablement Sickness claims, 6. daims, 4 Women:

The amount actually expended on sickness and maternity benefit during the year has been considerably below that allowed for by the Covernment actuaries. At the present time there are over 600 members known to be serving with the forces, and a very large percentage of these hold commissioned rank. cate and 15s, in books or tools.

Stone Carres:—Alfred Phillips—bronze medal and £1 in books or tools; Reginald From the committee of management, Messrs.

Maurice E. Webb, C. T. Steward, W. G. Newton, and H. A. James, are serving. is with the deepest regret that the committee records the deaths of five members on active service. An expression of sympathy on half of the society has been communicated to the relatives in every case. The benevolent fund, which is supported by contributions annual subscriptions from honorary members, has fortunately had no great calls upon its resources, but it has been able to render some really valuable assistance to certain members in argent need of it.

Mr. Philip E. Webb (who is retiring from

the office of treasurer on account of his enlistment) spoke on the financial position of the

society.

Mr. Ernest Newton moved the election of the committee of management as follows :-Chairman, George Corderoy, F.S.I. Members: E. H. Blake, F.S.I.; C. MacArthur Butler, F.C.I.S.; A. G. Cross, F.S.I.; Ralph Ellis, F.S.I.; H. M. Fletcher, F.R.I.B.A.; A. Goddard: George Hubbard, F.R.I.B.A., A Goddard; George Hubbard, F.R.I.B.A.; F.S.A.; H. A. James; B. Marr Johnson, F.S.I.; R. G. Lovell, A.R.I.B.A.; Ian MacAllister, B.A.; E. C. P. Mouson, E.R.I.B.A.; W. G. Newton, M.A., F.R.I.B.A.; Herbert Passmore, F.R.I.B.A.; F. R. Priest; G. Reeves; Clifford T. Steward, F.S.I.; H. W. Virgo, Maurice E. Webb, M.A.; Philip E. Webb, A.R.I.B.A.; H. D. Whitham, Treasurer, H. D. Searles-Webb, M. Steward, F. S. George Philip E. Webb, A.R.I.B.A.; Wood.

The motion was seconded by Mr. George

Reeves, and carried unanimously.

Mr. George Corderoy, replying on behalf of the committee, endorsed Mr. Webb's rethe committee, endorsed Mr. marks. Mr. George Reeves proposed a vote of thanks to the Architectural Association for granting the society free office accommodation. Mr. E. C. P. Monson (president of the Society of Architects) seconded motion, and it was carried unanimously.

Mr. Ralph Ellis proposed a vote of thanks to the retiring president, Mr. Ernest Newton, who was kindly presiding in the unavoidable absence of Mr. J. H. Hanson (president of the Surveyors Institution). He regretted to say that Mr. Hanson was at present seriously The motion was seconded by Mr. H. Searles Wood, and carried unanimously. Newton, in expressing his thanks, proposed that the secretary should write to Mr. Han son, conveying the society's sympathy and hopes for a speedy recovery.

# WARRELS FOR INGLISH OAK

We have divide the markets for oak into sses, a ording to the size and

1 Le test cass overs the largest and stress, suitable for quartering, for which FP, so a ductor is important, but eight of faction of the country required. Omitting attricty spess and other special war re-arements the last mired for these trees of minditness is far parelling and for the men is the times as for parelling and for the many is represents of the building trade. The edit mest generally used for these purposes is Artian oak; but it is a in the lower energy and it hat, although A string is fitter and easier to work than Erross, and therefore preferred by pomers, private regards in the preferred by pomers, and other important had respectively as regards. In the nate of Austrian of perfect the born in too long seasoned of the first text of a seasoned of the first text of a season the preferred by the perfect as at the rate of 10s perfect to the Parellin made of Fig. fore the currous at the rate of the fest. Parello, made of Eng-ter and higher than

1 188 of the timber in sol of a lis looked upon the fact alone .\ od to the Bughsh oak od to the Bughsh oak 0.041 ed a life is ally cost in it to be Spanish the meet lights of oak of the meet lights of oak of the tan er meet he gartening; the tan er meet light is present and the light than er the early it the cost become and the light terms of hy to tally cost = (lost, removed by Texpelter experies e. The seasoned or ey a birth and of looking the a limit tak to general marking of the control by

board a minimum of two years from the telling. Some might think a little longer seasoning advisible if artificial methods are not resorted to, but a very short time is necessary with the best modern artificial dry mg plants. The results are quite satisfac-tory, and I would point out that nearly all the much advertised foreign timber is seasoned by these modern methods. The ancient prejudices against artificial seasoning if oak were due to the interior results given by experimental stages. Again, objections that might be raised against seasoning oak artificial v for slepbuilding or similar special inced not apply to timber required for pinelling or interior work, or used under conditions which entail neither strain nor exposure to the weather.

Furning to the price, I think you will agree that, after allowing liberally for waste, cost of felling, hauling, transport, conversion and seasoning, the price which the producer receives for the standing oak tree differs ridiculous'y from that paid by the contractor

for the same timber in Linch boards.

Much Austrian oak has been used for panelling and similar purposes, and there should be in the future a sufficient demand for all the English oak we can offer, provided the demand is cultivated and the market properly organised. Unfortunately this class of oak is now converted for interior

12 The second class of oak is the coppicegrown oak averaging 25 to 50 cubic feet per tiec, for which the present largest outlet the wagon and carriage departments of our ratways. This is cultivated by English tim-ber merchants, who have to compete principally with the white American oak, or, in some cases, with Russian oak or even Austra-han words. The oak is converted into wagon scanting, and the price varies according to size, quality and specification; but we may assume an average figure for the converted tunber of, say, 5s. 6d, per cubic foot. Thanks to the great superiority of English oak for this purpose a far wider demand should be possible at considerably enhanced prices, it united action were taken to encourage it and improved 'methods of marketing were erganised. Owing to the case with which the foreign oak can be obtained, and the greater trouble caused to the railway officials by the native tunber, there is a prejudice against the latter, but it is absurd that native oak, much more valuable for this purpose, should invariably be priced at the same figure as the ioreign.

(3) The third class of oak comprises the small trees of under 20 cubic feet, which, on account of small size, large proportion of sapwood and to the high railway rates, should be account of the proportion of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compression of the compressio be converted principally locally. There should be ample toom for increasing the demand for this converted oak in the great wood-co-suming centres, where enormous quantities of oak are used. Many local markets also could be cultivated to a far greater extent than they are, such as gates, teneing, building fittings, repairs, and local requirements generally. Native timber could be used to a far greater extent in the district in which it is grown.

There are other outlets and uses for oak of various sizes and quality in London and other centros sizes and quanty in Louisea and elec-centros at correspondingly diverse prices, ranging from the high priced Austrian or best quality to the various classes of Ameri-can oak at prices ranging from 3s, 6d, to 6s, per cubic noot to converted sizes. The lowest per cubic noot for converted sizes. The lowest is probably American window-sill oak at about 3s per cubic foot, in which a propor-tion of sap is allowable. There has been an There has been an tion of sap is allowable. There has been an illerease in price of hearly 5 per cent, since 1885 on lower classes of imported oak and the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the cont or terroras and a so a observate in quality. Much of our rocky ability and English oak might be suitable to replace these of consoring it must determine what can be done in each a land cak in tance, and compet from might not be practically steed from the five in all cases. As I have shown, the precious case of the uniquestal stress is enormous. The imports of oak exclusive of the lands for the lands have shown to be fet. As the demand improved and the market became better organised, we mug it expect to find plenty of scope for all the test be on't we could offer

One of the staple objections taken to Enghsh oak is that it is harder than foreign. This should make English oak the timber par excellence for wool-bleck flooring—to name but one use in which such a characteristic is a recommendation. Yet, in spite of the large and increasing demand for wood-block flooring at good prices, there never has been any serious attempt to capture this and similar markets for English oak, and the softer foreign oak holds the field.

Again, take the question of oak spokes, for which the native timber is absolutely unequalled. Although the English market was flooded with cheap American spokes several years ago, and although the importation is still large, the price of these spokes has increased very considerably during the past ten years, and especially during the two years previous to the outbreak of war. Not only was there this considerable increase in price, but, as in the case of foreign timber generally, there was a considerable falling off in quality. We have an exceptional market for spokes; we have the finest timber of its kind in English oak for this purpose: we have large supplies of this timber obtainable at low prices; and yet there has been no serious attempt to retain or capture the spoke trade for this country.

I am units aware that the introduction of notor vehices has recently partially revolu-tionised the spoke trade, and that the introduction of iron or wire wheels would possilly appear to have restricted the market for wooden spokes. But here, as in other in stances, testruction in some directions is ac companied by wider opportunities in others and modern increased facilities for transport and travel greatly increase the number of vehicles required. The spokes used for highvehicles required. class carriages for a long time past have been made principally from imported wood of special varieties. There has been, of course, a falling off in the quantity of spokes wanted, but the number of horse-drawn carts and other velice's for agricult tral purposes, local trades, and commercial industries generally, is still very large, and will not be greatly reduced by motor traffic in the near future. There are also gover possibilities for English cak in the motor spoke trade.

These are only a few out of many directions where the conditions, possibly unfavourable twenty yers ago, are now propitious to suc-cessful competition by the native produce. We must, however, instil enterprise into the untive trade and surmount the difficulty of capital. We must also assist by organised marketing and regular supplies of the necessary timber, and he everything possible to cultivat, the lemand for the mitive produce. There are many other existing and suggested outputs for salt, but the above must suffice

as an illustration.

METHODS OF MARKETING.

Having pointed out improved and proper outlets for our timber, it is now important to consider what is the most practical method of catering for these markets which lie open before us, and how we can take due advantage of these wider opportunities.

I will again take oak as an illustration, although similar arguments will apply to other timbers. The exact methods will depend on locality and character of timber.

We must appreciate fully all the existing conditions relating to the marketing of timber, and must shape our policy accord-ingly. In some cases it will be practicable for large merchants to purchase the timber standing, and arrange all details as to mor-keting. Facilities are accessary for estates to get in touch with such firms, and also to enable a firm to purchase timber from several estates in a district. In other cases large merchants and firms in London and other centres might require selected parcels limited perhaps to one variety. It might be difficult also for them in some cases to send teams and tackle for hanling, or gangs for felling, or to inspect small and detached parcels

We all wish to assist any honest and oldestablished local firms who have dealt with estates for a number of years, and whose principal business fault, perhaps, is an old-fashion of conservatism, or want of capital. The local firm has knowledge of local condiconvert the smaller classes of trees, but it is want of capital that limits its trade.

I think it will oft it be best for the large firm at a distance to act in conjunction with the local firm, the latter felling, hauling and dealing with mixed parcels, and the former storing, marketing and cultivating the defor the timber. For instance, the London or other large min would porchase the first class of oak to which I referred. delivered on rail. The same principle might apply to ash, beech, and other classes of our timber. The local firm also, to a far greater extent than at present, could convert to the requirements and specification of the large firm in the consuming centre. Markets should be organised between producing and consuming centres so as to reduce expenses, railway charges especially.

I am not wishing to prejudice the trade and output of the local firm. There are many There are many directions in which this might be encouraged or developed. And I appeal to landowners and land agents to specify native timber wherever possible. My object is to take advantage of those more lucrative markets to which I have made reference, but which at present are not developed for want of organised marketing; especially to encourage large firms who now deal so exclusively with imported timber to take up the marketing of the native timber and introduce capital, enterprise, and knowledge into the native timber trade. My object is also to organise market-ing so as to eliminate unnecessary profits caused by the timber pasing through so many hands.

A small amount of English oak is sold in spasmodic quantities somewhat on the above lines at present to a few large firms who have occasional inquiries for the timber. These inquiries are due to a tew architects and other consumers who absolutely misist on English oak being supplied. No attempt, however, is made to deal with the problem on an organised and large scale, or t cultivate the demand for the native timber.

I have already detailed the handlenes with which the native timber has had to contend. and it is not necessary to explain the reasons why these better markets have not been cultivated. It is due principally to a succession of unfortunate conditions and influences. The architect and consumer complain of the diffi culty or impossiblity of getting the timber. and of there being no firm generally known to stock it. The contractor and builder inform them that supplies of English oak are not available, and persuade them to accept the readily obtained foreign timber. The large merchant says he is not asked for it and the local merchant complains that there is no demand for it. And so one works round and round in a vicious circle.

The only method of dealing successfully with this problem is that an influential independent body should take up the matter and to organise supplies, and demand on proper lines and on an extensive scale. This is to be done by the English Forestry Association. who have formed a special committee to deal with the question, and on which committee this Institution and other hodres are represented. It is to the interest of all sections that this work should succeed, and to the prejudice of nobody, and, in view of the importance of diminishing imports and encouraging native supplies I trust that everyone will render all possible cooperation and help.

I have taken English oak as an illustration. but I do not think there is any country whose native timbers and native industries experience so deplorable a lack of encouragement as our own. It is typical of the present position that our finest brown oak has to be exported to America to be appreciated, and that the high prices paid are due entirely to the fore an demand, to which the present consumption is almost wholly limited.

I believe that with organised marketing area proper encouragement there are outlets to English oak and other native timbers abroad. particularly in America and some of our colonies, and I hope, in the future, with our present allies. Let us hope that in the recolonies, and I hope, in the future, with our present allies. Let us hope that in the result in the property of public buildings, churches, and state of afters. Wheat at 20s, per quarter was

tions and of felling and hauling, and can large residences in Belgium and France the world famed English oak shall find a place, if only as a memento of the war in which the nations have jointly shed their blood. reminder could there be more typical of England and of the far reaching innuence of the British Navy, whose glorious history was founded on ringlish oak

As regards timber other than oak, I shall hope to publish information and some strong elsewhere, since I cannot explain radic here After years of careful investigation it is no opimon that given organised macketing, increased demand and improved prices are possible for nearly all kinds of native timber and hardwoods partien aly

#### REPLACING EXPORTS.

We all welcome suggestions for extending the use of native supplies and displacing some of the imported timber, but I think that undue importance is often given to conferons tumber (latch excepted), to the exclusion of our relatively more important hardwoods. providing notice Scots pine for the Forestry Building at the Shrewsbury Roya, Snow and otherwise advertising it. I have tried to en contrage its extend douse, and have organised supplies of it for creosoted boards and other estate purposes. I think, however, that as a general policy we shall have a far better hope of success if we concentrate most of our energy on extended uses of native hardwoods. There is ample room for these woods in place of imported varieties of similar timber, and as a substitute for such timbers as Hickory and some of the finer foreign timbers. I would go even further and advocate that, given enterprise and proper encouragement we could with native goods displace some of the wood imports that arrive in a finished or partially manufactured state. I hope that far greater attention and encouragement, especially by consumers and the public, will henceforth be given in this direction.

Taking all the facts into consideration, link it will be agreed that it should be easier for English oak to compete with Austrian or American call for building or other trades than for inner of our native Scots sine, as a present grown an English words, to compute with first, so ond, or even third Archangel. would point out that our hardwoods are more plentiful and important; they are gener ally of comparatively better quality and possess superior characteristics; being higher priced, they can bear more cost in transport and for many purposes length or freedom from knots is not so vital. Moreover, imported hardwoods usually have higher freights to pay than the nominal return freights which Jarge Baltic supplies enjoy

I think, therefore, that, speaking "enerally, most of our present supplies of native Scots pine timber would be better used for sleepers, wagon battens, fencing, and many collery requirements than if converted into scantling or building timber

By encouraging our hardwoods we shall als cencourage wood industries that can carried on in the provinces and rural dis-

# CONSUMERS OF NATIVE TIMBER.

The responsibilities and duties of the producer of timber in this country are constantly emphasised in the press, but never the obligations of consumers and manufacturers to use native supplies. Consumers and manufac turers have drawn their best labour from rural districts, and surely they have obliga-tions in return to these districts. They have benefited far more than the much-abused land d interests from the resources of the country, to which they ove a correspondingly greater debt. I think that many consumers would have felt far more comfortable at various peareds of this war had there been larger native supplies available, or had planting in the pist not been so much discoursed by consumers. This is not the time benefited far more than the much abused conraged by consumers. This is not the time for varn regrets or accusations; we have all made mistakes, and the best course is for all sections to mate in preventing their repeti-

# THE TIMBER IRADI.

All members of the native timber trade

bull for the home merchant, for the producer, and for all interests. Good English oak at 1s. 6d, per cubic foot is equally bad for all. The native timber trade has been particularly short sighted in thinking only of cheap buy ing instead of paying most attention to cultivating the consumer, encomaging the demand, and selling in the best market. I have no hesitation in saying that timber rings have been the curse of the native tumber trade, and have largely contributed to the present position. They have inflicted great damage on the timber trade itself. They have brought discredit on what is an honest and honourable cading: they have prejudiced producers against improving the riwoods, and consumers against using native timber; they have di verted necessary capital from the industry. and have throttled enterprise so needful for competing with imported timber.

I have no wish to dwell upon the unfor timate practice of timber rings. I appreciate

tunate practice of tunber rings. I appreciate fully the depressing and anxious period through which the native timber trade has passed during the list thirty years.

I now appeal to members of the timber trade to decline to support, and, in fact, to deal set only with those who try to form rings and prevent legitimate competition.

Merchants often criticise not always in

the most comp imentary terms -our ignorance of the requirements of their trade, and of the variety, size and character of the timber that should be grown, and of its marketing. They are often unduly suspicious, however, when we diseass trade requirements, in giming that we wish to enter the timber trade

It is important that people interested in woods should be better informed as to the markets for timber and the requirements of merchants and consumers. The various timbers can then be placed on the market more in the form required by purchasers and parti-cular trades, and so secure the best results. It is part of the English Forestry Association's work to give information on these points.

Since our main object is to encourage the demand for the timber, and to see that this demand shall be properly met, the Association should receive the hearty support of the

timber trade.

I would appeal strongly to the timber trade there is from so constantly decrying native It is periority natural that a merchant should wish to buy as cheaply as pos-sible, and with that view to enlarge on the inferiority of the timber he is go d enough to purchase. I fear we take many of these bar gaining criticisms far too seriously, and that they are advertised far too generously to con sumers and others. For many of markets in oak, diameter is much more important than length of butt; but, because want of length is a fault that can be raised. we are ant to think that length is all impor-

The native timber trade is carried on un der many difficulties; we can do much to help place it on a more satisfactory footing, to the advantage of all concerned. I would to the advantage of all concerned. appeal for a better spirit of co-operation, and would ask the trade to institute enterprise in developing new markets Merchants must see that we cannot allow the welfare of our woods to be prejudiced.

# ENGLISH TIMBER DURING THE WAR.

A detailed report of the demand, sales, and prices of English timber since the outbreak of war would be interesting but very long, and I can here deal with the matter in general I have also a rooted objection terms only. against quoting prices excepting to illustrate a point if separated from details of locality. quantity, size, and character of the trees, cost of transport, etc. It is common knowledge that good prices have ruled for ash and other timbers in special demand, although I fear that in many cases the landowner did not re-ceive his proper share of the increased price Without wishing to labour a point unduly, I think all must admit that the war has illustrated strikingly the great importance of orgamsation in marketing timber, and the very great need of a central body to keep owners and agents informed as to what is or is not in demand, and guide them as to prices ruling.

The great demand has been for ash for all kinds of military requirements, for general service and limbered wagons, for felloes, for

ds and ribs, for tool handles, z pigs, and, in fact, for any pur-casticity and strength combined while factors.

The denated shows no present containing, and landowners should be the action of some obtaining record prices, the containing record prices, and the containing record prices, and the containing record prices, and the containing record prices are should request, if of what is in special request, than the effrestrying oak or other when the demand is not pressing. in worder is wanted as to the a hadd for the different time y to per an surprised, because y has not commanded a ready is the first of the communication of the war. producers has depressed prices, encouraged timber rings, and is particularly unfair to adjoining estates. It is, therefore, impor-tant that there should be facilities for obtaining experienced men to advise when ad vice is needed.

### FORESTRY MUSEUM.

You will notice that the planks exhibited in this room are from the Institution's Forestry Museum. This museum was founded by Mr. Daniel Watney during his presidential year. I have been for some time reorganising this collection. Although it is slow and often discouraging work collecting good specimens of timber or other exhibits, I hope soon to make the collection a really interesting one. The upper floor has now been extended, so that we have more room for specimens.

I should like to state briefly the basis on which the exhibits will be arranged and the objects in view. We desire to interest three sections of members particularly: (1) Students who wish to study the exhibits with reference to forestry or architecture: (2) land agents or others interested in the product on and commercial utilisation of timber; (5) architects, building surveyors and others interested in specifications for building con-

struction.

In the hotanical cases each tree is described botanically and illustrated by photographs of the tree in summer and in winter, with examples of the foliage, bud, twig, bark, timber, seed, and other features. There are many examples of the timbers of various trees, illustrated by cross and tangential sections. There are also photographs of fine specimens of trees growing in this country, taken principally from Messrs. Elwes and Henry's well-known book.

Planks are included of different timber as a basis for comparison of structure, rate of growth, proportion of sapwood, and other points. Both knife and saw-cut veneers of English timber are shown; also exhibits illustrating important points in forestry, injurious insects, effects of bad pruning, examples of oak paneling, the conversion of oak, etc. hope to include an exhibit illustrating the conversion of coppice for rural wood industries. The specimens are now temp to labelled, and as much information as possible included on each label.

An exhibit which I hope will be of speciai interest is that of building timbers, which is now being arranged. This covers the timbers used in the building trade, showing (1) the popular and botanical names of the tree from which the timber is sawn; (2) the various names by which the timber is known in the tride and the country from which it is imported. Our familiar "Scotch," for instance appears as follows: "Scots pine (Pinus sylvestrist, timber imported under the name of 'Baltic fir,' 'red deal,' 'red fir,' 'yellow deal,' 'Archangel,' etc.'' I hope also to illustrate trees whose planting in this country is advocated, such as Douglas fir. I shall include instances of the timber imported under the names of "Oregon pine," "Columbian pine," etc., and examples of the timber of the same species grown in this country. will enable architects and land agents to appreciate the possibilities of our home-grown Douglas fir.

Other countries and colonies have exhibits. in London and elsewhere, of their native timbers, and I should like to make this a fine permanent collection of English timber. The museum might then become the recognised exhibition of English timber and forestry, and I hope would do justice to and be a worthy memorial of its founder, our senior

past president.

Lappeal to numbers to take an interest in this museum. We shall welcome exhibits of this museum. We shan we come general interest, and, especially, good speci-general interest, and especially, good speci-consecutive forest produce. Our space being somewhat limited. I do not wish to in clude too many "monstrosities."

I hope to arrange an exhibit illustrating the timbers required for the war, so members will apreciate the timber in demand and

thorough investigation of all aspects of the forestry problem, to find a solution which, I am convinced, is bound up with the extent of the support it shall receive.

We now have a golden opportunity to try to remedy matters by joint action, since the public is sympathetic in discouraging imports. and consumers wish to avail themselves of

native supplies.

An independent and influential body can succeed where individual and unorganised efforts would fail. A central body in close touch with estates, merchants, and consumers, must possess special information and be in a far stronger position to ensure good results in the sale of timber than are individuals. working separately.

Let me summarise some of the details of

our work:-

1. We keep a register of firms who supply goods made from English timber, and we give their names to Government departments and to all other people open to contracts or sales.

2. We keep a register of consumers who require English timber for their business, and we help them in every way possible to obtain, with the least trouble, the necessary

supplies of the most suitable timber.

3. We keep a register of timber merchants, with details of the timber they consume or special trades for which they cater; we give their names where converted timber or such goods as they supply are required; and assist. them in competing with imported timber. We also put them in touch with estates which have timber for disposal, and help them to secure the supplies of timber which

they require.

4 We place estates who write to us offering timber for sale in touch with merchants requiring timber, selecting the best buyers in

each case.

5. We collect and classify valuable information on practical points concerning timber and its markets, and we issue this information in leaflet form. We have experienced representatives in different districts, and give to members information relating to local and special demands. Only by means of a fuller knowledge of every section can we make proper use of our native supplies and their markets, and ensure each section receiving its due part of the price paid by the consumer.

We are not yet through this war, and itis impossible to foresee what the future has in store or what demands there will be on our native timber. We are dependent on other nations and on our shipping for the imported timber, and it would be serious for the country if the Baltic or other supplies were diverted or restricted from any cause.

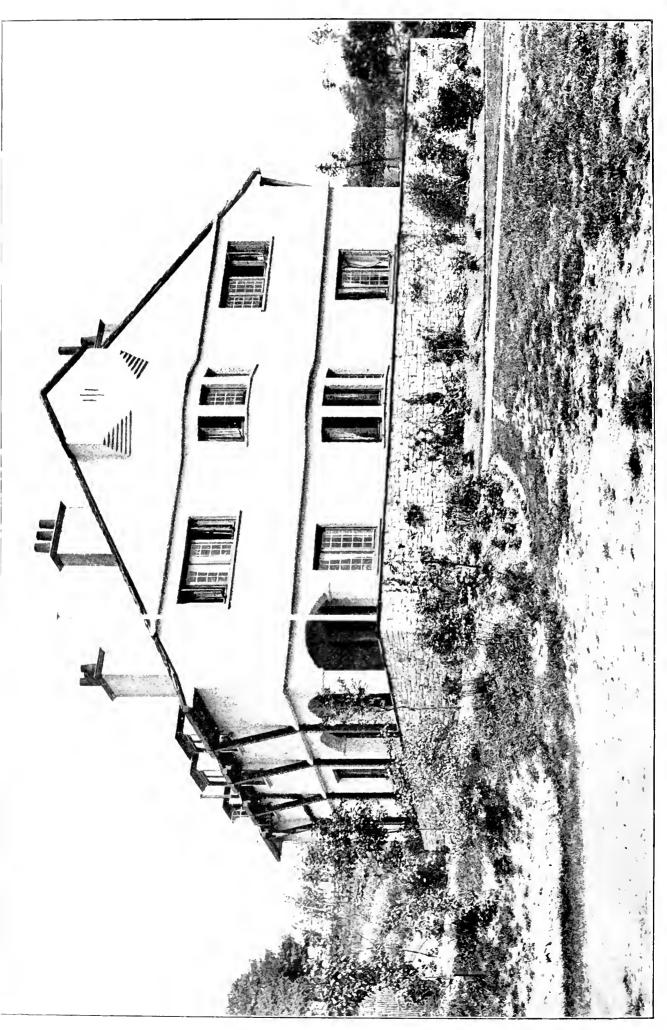

When a struggle extends to the sources of a nation it is a case of exhaustion ir the final stage, and organisation must be a large determining factor at the time, and also as to the extent of the resulting

Again, no one can foretell the after-war conditions. Germacy, like the United States of America, is more powerful as, and more of America, is more powerful as, and more adapted to be, a commercial than a military nation. We cannot foresee the industrial war which may follow the declaration of peace. We were unprepared for this present war, and are we all doing our best to prepare for an industrial war?

It is a time of great national emergency and there are great issues at stake in every direction, and particularly in the case of the native supplies of timber. Instead of being forced into action let us show what we can do by voluntary effort and give a lead to the country By joint action we shall then be prepared for any emergency, and in any case we shall be able then to place English oak and our native timber in the position which they ought to occupy.

The Senate of the Queen's University, Belfast, have resolved that a tablet to the memory of the late Mr. W. H. Lynn, R.H.A., architect, be placed in the Examination Hall. Mr. Lynn was long and intimately connected with the University as consulting architect, and, by his will, a generous benefactor. The Senate of the University have also appointed Mr. R. M. the new translation of the share and the second to the above in a previous paper, and I have further and I have further illustrated its work in the share of timber and I have further illustrated its work in the share of the part of the Association was formed, after the succession to Mr. Lynn.

## Currente Calamo.

At the annual meeting of the London Master Builders' Association held at Koh-i-Nor House, Kingsway, W.C., on Wednesday afternoon, Mr. W. F. Wallis, of Maidstone, the president, in the chair, the urgent need for the extension of the scope of the War Emergency Act so as to relieve builders and lessees who had entered into pre-War contracts for the erection of buildings or for leasing building sites which altered circumstances render it impossible to fulfil, was brought forward. On the motion of Mr. Renshaw, seconded by Mr. Hill, of Messrs, Higgs and Hill, a resolution was unanimously adopted calling upon the council to collect evidence from their members, and from master builders' associations throughout the country, with a view to preparing a memorial to the Government urging the necessity for an amendment of the Act. When the terms of the memorial have been settled, a deputation will be appointed to wait upon the Prime Minister and put before him the gross injustice of the existing state of things and the need for further legislation.

The Officer commanding the Second Battalion of the Artists' Rifles, Officers' Training Corps, has decided to form a special company to consist mainly of professional men whose technical experience renders them qualified for appointment as officers to those units or branches of the Army in which knowledge of construction and civil engineering is especially useful in the conditions obtaining in modern war. A large number of men have already been enrolled, but there are still vacancies for civil, mechanical, and mining engineers, architects, public works surveyors, and borough engineers, to receive the military training which is essential if the military authorities are to make full use of their professional skill and experience. The training will be directed to the development of that portion of the candidates' peace training which is applicable to military work and such further instruction as will enable them to apply their technical knowledge effectively to military requirements. The scope of the training will extend beyond ordinary field engineering, and will be both of an individual and collective character. It will include en gineers' reconnaissance, building and repair of bridges and roads, work in connection with embarkation and disembarkation of troops, military sanitation and water supply, the construction of defensive positions, animal management, and such other instruction as is necessary to render the candidate for a comnnission a thoroughly efficient officer. Pro-fessional men having Colonial experience will be particularly welcome, and during their training will be associated with men of like social position and education. Application for nomination to the Corps should be made to the Headquarters, Artists' Rifles, O.T.C., 7, Duke's Road, Erston Road, W.C.

No one conversant with the rapidly increasing badness of the roads in most districts can ignore the strong criticism offered last week of the action of some of the county councils, and more especially of the Road Board, at the meeting of the National Traction Engine Owners and Users Association. It was insisted that the proposals of the County Councils' Association were of such a drastic nature that if they became operative they would effectually ruin all those who were engaged in the business of heavy locomotive handage. The Traction Owners also view with

considerable apprehension the proposal to suspend the activities of the Road Board during the war. If one fact has been demonstrated more clearly than another during the present crisis, it is that self propelled traffic of every kind is of almost vital importance in the country. The railways are congested, and likely to become more so. The committee on Public Retrenchment appear to look upon the maintenance and strengthening of the highways as a species of luxury. If their recommendations as to the suspension of the Road Board, etc., are carried into effect, not only will present road transport be immediately impeded, but the country will pay dearly for such false and mistaken economy, for the roads will be living on their capital account, and unfortunately, in most cases, the margin is a narrow one.

In a sensible letter in the "Manchester Guardian," the secretary of the Manchester and District House Builders' Association. writing from 27, Brazennose Street, Man chester, deals trenchantly with some of the statements of well-meaning people who, while quite rightly deploring the present shortage of houses in Manchester and elsewhere, talk nonsense about the "enormous profits of the speculative builder," a statement which has no foundation in fact, and which is proved baseless by the records of the wealth left by men in the trade. As is further pointed out. two causes have combined to put an end to building in Manchester. First and foremost the Finance Act, 1909, rightly or wrongly, had the effect of trightening investors who had hitherto been the customers of the house builder and whose capital had enabled the house-builder to provide homes for the work ing classes. This is not confined to Man chester alone; it has had the same effect throughout the land, and the housing problem is consequently a national affair. Next, the building by-laws which came into force in Manchester in 1908 imposed unreasonable and arbitrary regulations in certain respects, which have made the houses more expensive and thereby deterred the house builder from carrying on his trade.

As regards the alleged superiority of Manchester municipal built houses, the secretary asks what was the total cost per house of the corporation houses on the Blackley estate, what interest on the outlay is received by the city, and whother those houses were passed by the building inspector as being built in accordance with the by-laws? If these questions are satisfactorily answered, it will be time, possibly, to consider the further building of cottages to the extent of £1,000,000. In opposing the municipality spending such a sum of money no one contends that the housing question must be left as it is. It is a difficult and intricate problem, but it is quite capable of solution on ordinary business lines. The house builder has built, according to the best authorities, 98 per cent. of the cottage houses in the country, and by his enterprise and foresight he has provided the comfortable and convenient homes which the people now enjoy. He can continue to supply the need, if only the many unnecessary exactions and restrictions which harass him on all sides are removed. At present, as far as the Government is concerned, there is little chance of that; but in any great centre of population it is surely the duty of all to see that those charged with the direction of local affairs should try to realise what are the real causes of the evils for which so many

The response to the appeal of the Empire has been so glorious that an impulse higher than the sense of duty calls upon those at home to give of our best in the interests of the gallant men who return sick and wounded from the conflict with a dishonourable foe. For some time Miss Margaret Lindsay Williams has been most desirous of helping this great cause, which must be near to the hearts of all. She is giving an exhibition of her pictures as a means of benefiting the funds of the Welsh Hospital, and feels sure that, in addition to the small entrance fee charged, many will avail themselves of this opportunity to contribute towards such an object. As a means of obtaining a substantial amount, it is her intention to offer to paint a life-size three quarter length portrait of the lady or gentleman on whose behalt the highest bid is made for an empty trame shown at the exhibition no bid to be less than £100. The entire sum for this portrait, together with all subscriptions and receipts, are to be handed over to Sir William James Thomas, the hon, treasurer of the Welsh Hospital. In addition to her own work, some sculpture by Sir William Goscombe John, R.A., and Mr. Leonard S. Merrifield, and architectural designs by Colonel E. M. Bruce Vaughan, have been kindly lent for the exhibition, which opened on Monday at the New Galleries, 131, Queen Street, Cardiff, and closes on Saturday next.

One of the many ill-effects of the war is the hindrance to the work of building the Liverpool Cathedral. The staff of artisans and workmen has become so depleted that the committee have now reluctantly given up all hopes of completing the choir, and the magnificent double transept adjoining, within the period formerly thought possible. They propose now to concentrate their efforts upon the completion of the bare roof and the wills. Meanwhile, in the face of all difficulties the task of raising this great national meanment goes uncersingly, if tardily, forward

The late Mr. James Longley, of The Beeches, Crawley, Sussex, builder and contractor, offiestate valued at £55,887.

Lieutenant Stanley Vanstone, of the Rifle Brigade, late assistant surveyor to the Teignmonth Urban District Coancil, has died f.om wounds in France.

Mr. A. W. Sinclair, of Scarb-rough, the president of the National Federation of Building Trade Employers of Great Britain and Ireland, has been appointed a justice of the procefor that borough.

A Primitive Methodist church is about to be built at East Cramling.on. The architects are Messus, Harrison and Ash, of Newcastle entyne, and the contractor is Mr. W. Robertson, Whinney Hill, Choppington.

The urban district council of Sittingbourne received at their last meeting tenders for the erection of a public convenience, estimated to ust £500. As the lowest tender amounted to £017, the scheme was referred back for revision.

The church of St. John, Chopwell, in the parish of Winlaton, was consecrated on the 7th inst. by the Bishop of Jarrow. The district which it sorves is shortly to be formed into a new parish, and has a population of quite 7,000.

A new Wesleyan church at Carcroft, near Doncaster, built at a cost of about £3,000, has been formally opened. Mr O M Therpe, of Long Eaton, was the architect, and Messrs. Sprakes and Sons, of Doncaster, were the builders.

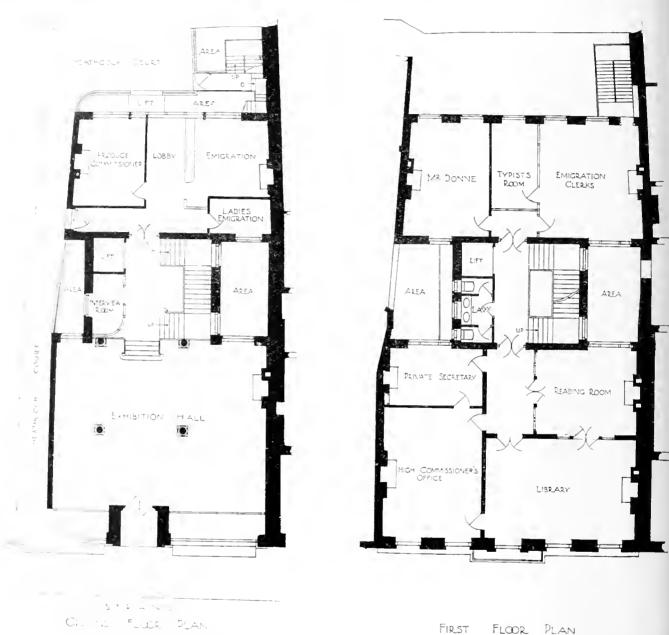

At the meeting of the London County Council on Tuesday afternoon of last week. Mr. Debenham, replying to Mr. J. D. Gilbert, said that the new County Hall now stood at about the average level of the fourth floor. There were 636 men employed on the work, but in view of the conditions obtaining it was not possible to-say when the hall would be ready for use.

inforced columns being in this instance, 15 in, in diameter. A goods lift has been provided between the ground floor and first floor. The whole of the floors, staircases, flat roofs, and columns have been con structed in reinforced concrete on the Kalm system of reinforcement, the bars having heen supplied by the Trussed Steel Concrete Co., Limited, Caxton House, Westminster, and the floors have been calculated to sustain an evenly distributed load of 1½ cwt, per toot super, the spanning of the primary beams being 18 ft. 6 in, and the secondary beams 28 ft. The walls have been constructed with bricks on the inside, and best quality local facing bricks on the outside. The windows have wood mullions and transomes to match the existing windows to the old factory, and have been fitted with iron casements. Excellent lighting has been obtained by these large windows lacing Old Foundry Road on the one side and St. garet's Street on the other, and in addition to these, four large lantern lights, each 15 ft by 9 ft., have been constructed over the llat roof above the first floor, with prismatic lights in the first floor immediately underneath same to give additional lighting on the ground floor. These lights have been mainground floor. These lights have been manufactured by the Luxfer Prism Company, 16, Hill Street, Einsbury, E.C. The ventilators are of copper, and have been manufactured by Messis. Ewart and Sons, Limited, Enston Road, N.W. The heating is by low-pressure hot water from a Robin Hood boiler, con with hot-water radiators throughout nected the building. The electric lighting through out has been installed by the Ipswich Corpora out has been installed by the Ipswich corpora-tion Electric Supply Company. The whole of the work has been carried out from the designs and under the superintend-ence of Mr. Raymond C. Wrinch, A.R.I.B.A., architect, 16, Museum Street, Ipswich; the contractors are Messrs, Cubit and Gotts, Station Works, Westerfield, the contract for huilding being £8,058 The subcontractor for the heating engineering work is Mr. E. Scott, St. Margaret's Green, Ips wich and for the reinforced concrete Mr. H. T. Yelf, of Norwich. The building is now Yelf, of Norwich. The building is now nearing completion, and it is hoped to be able to hand it over to Messrs. Phillips and Piper, Limited, early in the new year.

#### "THE WHITE HOUSE," HEATON, NEAR BOLTON.

We give two photographs, and in this column a plan, of Mr. Oliver H. Haslam's house, near Bolton. There are very few particulars to give respecting the building. The house is of brick, rough-casted, and the roof is of heavy

local stone flags. The contractors were Messrs, J. C. and F. Woods, of Bolton, and Mr. R. Herman Crook, also of Bolton, was acting architect on the spot, the design of the house being by Mr. R. Heywood Haslam, of 32, Essex Street, Strand, W.C.

by Mr. Frank Brangwyn, A.R.A., there is little to be said to day in respect to the further subject now illustrated. The incident chosen is "St. Wilfred, First Bishop of to the Our previous reproductions of the ploto-graphs, lent us for the purpose by Mr. Brangwyn, appeared on October 6, 15, and 27 last, a general description appearing with the commencement of the series. To day we are enabled, by the courtesy of 8n Åston Webb, R.A., to give a longitudinal section of the chapel, showing how these decorations range as a frieze over the stalls. This draw ing greatly enhances the value of our representations of the paintings themselves, as it enables the reader to understand their positions and sequence in the general scheme. The late Mr. Ingress Bell was, of course, joint architect with Sir Aston Webb tor all the buildings carried out for Christ's Hos pital at Horsham. Our previous illustrations of the school will be found in the BULLING News for June 22, 1894, after the competi-tion was decided, and on October 22, 1897, the day before the foundation-stone was laid by King Edward VII., when he was rained by King Edward VII. when he was Prince of Wales. We hope shortly to give further illustrations of Mi Brangwyn's tempera paintings, and complete the whole set with a general view of the chapel.

#### PARLIAMENTARY NOTES.

INCREASE OF REAL BILL. Alterations of a far reaching character in the list two clauses of the Increase of Rent Bill were made during its consideration in Committee on Wednesday evening. By the omission, on the proposition of Mr Wilter Long, of the first clause, which provided that the scheme should operate only provided that the scheme should operate only in special areas, defined by Order in Conneal, the Bill was made applicable to any part of the United Kengdom where an unfair harden has been imposed on small tenants by the raising of their rents since the commencement of the war. A Government amendment was also inserted prohibiting the raising of rents on account of decorations or reputs. By a further change it was laid down that where the landlord pays the rates the Bill shall not apply to an increase of rent not exceeding any increase an increase of rout not exceeding any increase in the ratis. Several other incoding were passed, and further alterations were fore shadowed by Mr Long.—The Bill passed through Committee on Thursday last after some discussion as to us scope. As the outcome, Mr. Long said he understood that the Committee were willing to accept the suggestions to which the Committee were willing to accept the suggestions to which the Committee. tions to which the Government were prepared to agree. These came to this, that the rental or rateable value as mentioned in the Bill would now stand at £35 for London, £30 for Scotland, and £26 for the rest of the country. The compromise would be these differences in the rent, and the extension of the area from the adminstrative county of London to the London police area. A Government amend ment was also agreed to providing that the Act should not apply to a house let at a rent which was less than two-thirds of its total levalue. A further Government amendment to the concluding provision of Clause 3 extend ing its protection to sub-tenants, was adopted

## WATER SUPPLY AND SANITARY MATTERS.

DEFERRED SEWERAGE CONTRACT AT ADM The war has created a singular problem with regard to the Adel sewerage scheme. Adel is a village on the Wharfedale boundary of the a village on the Wharfedale houndary of the Leeds Corporation, and some time ago a schema-to cost £6,764 was approved by the Local Government Board for the sewerage of the village, at being arranged that the Leeds Co-poration should continue their main sewer in order that the sewage could be treated by them. On the outbreak of war only about half the schema had been secondary. them. On the outbreak of war only about nair the scheme had been completed. A sum of £3,000 had been spent. The Leeds Corpor: tion then wrote, stating that, owing to the altered conditions, they could not carry on the ripart of the contract, and, whilst the cur-tractor for the rural district council would not the house being by Mr. R. Heywood Haslam, of 32, Essex Street, Strand, W.C.

THE CHAPEL, CHRIST'S HOSPITAL SCHOOL, HORSHAM: LONGITUDINAL SECTION AND DECORATIONS.
Having already illustrated six of the mural panels in tempera painting, giving incidents in the History of the Fathers of the Church, guiton into the problem to-day (Wednesday).

#### COMPETITIONS.

Alexander Thomson Travelling Student SHIP. As will be seen in our advertisement pages, owing to the war the Glas-ov Institute of Architects announces that the Trustees have again decided to postpone this stalentship for one year. All stalents who were originally eligible and have zone on mithturn service will be allowed to compete when competition is held.

#### PROFESSIONAL AND TRADE SOCIETIES.

-

THE SHIFTY OF ENGINEERS. mail meeting of the Society of Engineers held on Manday night under the presidency of Mr. Norman Scorgie, borough engineer of Hackney, it was reported that the President's Gold Medal had been awarded to Mr. Arthur H. Barker, the Bessemer Premium to Mr. Alphonse Steiger, and Lacy Premiums to Mr. sydney G. Turner and Mr. Frank Groves Mr. Percy Griffith was elected president, and Messis, H. O. Adams, W. B. Esson, and W. N. Twelvetrees vice-presidents. The Sectetary reported a membership of 538, with 85 affiliated members. About 50 were on active service, and many more engaged on miscellaneous war work is befitted engineers, when the result of the war depended so largely on engineering science. With regard to the effort of the society to improve the status of professional engineers if all classes considerable progress had been unde in the preparation of a comprehensive scheme dealing with the proa comprehensive science deading with the pro-fessional qualifications, fees, and etiquette of consulting engineers. Consideration was also being given to the position of salaried engineering officials, particularly these om-ployed by municipal and similar bodies. The welcomed information which would council. assist them in accomplishing their object.

Mr. James Newman, for many years surveyor to the Sandown Urban District Council, died recently at Shanklin.

Sewage outfall works are about to be con-structed at Newthorpe, near Nottingham, Jor the Basford Rural District Council The engineers are Messrs. Elliott and Brown, of Parliament Street, Nottingham.

The Duchess of Marlborough opened on Fri-The Duchess of Mariborough opened on Fuday the new nursery training school of the Women's Industrial Council, which has been erected on the Hampstead Garden Suburb at a cost of between £7.000 and £8,000. The school will provide accommodation for forty nurses and twenty-eight children.

There has opened at the Outlook Tower, Edinburgh, on Saturday, by Mr. James Caden-head, A.R.S.A., the second exhibition and sale head, A.R.S.A., the second exhibition and sale of the craftsmanship of the younger artists in Edinburgh, the general demand for whose work has greatly diminished since the war began. There are fifty-five exhibitors, and on the walls of the two rooms, which their exhibits occupy, are many artistic productions of merit. The works include framed specimens of wood block printing, exhiuse litherents. ment. The works include framed specimens of wood block printing, etchings, lithographs, and water and oil paintings, and also handmade and hand-painted pottery, leather and linen articles, and gesso jewellery.

linen articles, and gesso jewellery.

At the meeting on Friday night of the Royal Birmingham Society of Artists a lecture was delivered by Sir Whitworth Wallis, who chose as his subject. The King's Pictures at Windsor Castle and Buckingham Palace. There was a large attendance, presided over by Mr. J. A. Cossins. Sir Whitworth described the painting, and gave the history of the Royal collection of pictures from its origin in the time of Henry VIII. down to the works acquired by Queen Victoria, the Prince Consort, and Edward VII. The lecture was illustrated by permission of his Majesty the King by a series of slides which had been specially prepared for the purpose. the purpose.

Some Roman relies recently unearthed in King William Street, E.C., between Abchurch Lane and Nicholas Lane, have been added to the City Guildhall Museum. They include a fragment of tesselated pavement, some pottery, and a small whetstone. In some excavations at Finsbury Circus even more interesting disconnections and a small whetstone when the form of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control coveries were made, including a deer-horn boe, an urn filled with burnt human remains, a Samian bowl, and some bronze bracelets. The Saman bowl, and some bronze bracelets. The unseum has also received, as a gift from the City of London Real Property Company, three pillisters, with capitals, from the facade of the old Saracen's Head Inn, Aldgate. These date from the middle of the seventeenth century. The pillisters are of pitch pine, with repairs in deal, and the capitals in oak. The foliated organization of the pillisters are nailed upon the brokground, and many of the original nails remain. ramain.

The Bent Colliery Company, Ltd., who own The Bent Colliery Company, Ltd., who own the Bothwellhaugh Colliery adjoining the Hamilton Palace Estate, have been granted authority to work one of the four main coal seams. This is the ell coal, which here has a depth of 6 ft. 9 ins. Lut liberty to work it is confined exclusively to the area under the Palace. No authority to remove coal has been granted so far as the Mausoleum is concerned. Before operations are begun the driving of the connecting mines from the Bothwellhaugh Colliery will occupy about eighteen months. Any possibility of the Palace being affected by subsidence cannot occur within three or four years from the time operations were comyears from the time operations were commenced. The Palace has long ceased to be a residence of the Hamilton family.

Estate valued at £5,993 was left by the late Mr. George Lister Sutcliffe, F.R.I.B.A., formerly a member of the firm of Messrs. Sutcliffe and Sutcliffe, of Hebden Bridge and Tod-

A new Congregational church in the old Leigh Read, Westeliffon-Sea, built at a cost of £13,000, has been formully dedicated. The architects were Meesrs Burles and Harris, of Southend, and Meesrs. E. Strange and Sons, Limited, of Lendon, were the contractors.

#### FO CORRESPONDENTS.

ce as not hold ourselves responsible for the opinious of car correspondents. An communication should be drawf up as briefly as possible, as there are many calmants upon the space afforted to correspondents.

many commants upon the space allotted to correspondents. It is particularly requested that all drawings and a communicate in respecting illustrations or literary matter, books for review, etc., should be addressed to the lift of the Building Naws. Ellingham House, I. Arundel street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' risks, and the Editor will not undertake to pay for, or be hable for, unsought contributions.

\*\*Drawings of selected competition designs, important public and private buildings, details of old and new wirk, and good sketches are always well come, and for such no charge is made for insertion of in the commonplace subjects, small churches, chapils, houses, of the we have usually far more sent than we can insert, but are glad to do so when space prints, on initially advantageous terms, which may be ascertained on application.

When favouring us with drawings or photographs, much tests are asked kindly to state how long the building has been created. It does neither them nor us much good to illustrate bindings which have been come time excented, except under special circumstates.

#### HARMONIOUS ACCORD IN ARCHI-TECTURAL FORM.

Harmonions Accord in Architectural Form ...

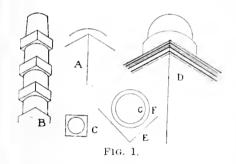

Competition and Contracts ...

Rural Dwellings in Ireland .. The London County Council ..

The R.I.B.A. Examinations ... Norman Castles in Scotland Currente Calamo

Professional and Trade Societies ... 

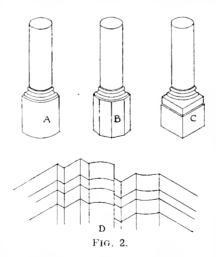

Since the forms seen in architecture are all reducible to the rectangular and the curvilinear, any principles that govern the harmonious co-ordination of such form must be founded, basically, on a general law relative to the juxtaposition of curves and angles. In a recent article on synthetic architecture we endeavoured to show that the laws regulating contrast

and harmony in two-dimension design bear relation, necessarily, to the rules regulating composition in three dimensions. In such, the circle, the circular, and the curvilinear are set off, and their esthetic attributes enhanced by opposition to the sharp, spiny, and angular. The fundamental principle respecting the smooth and sharp in architecture may be reduced to a simple diagram, A, Fig. 1, wherein an arrow-like object-the rectangular, as seen in perspective-is brought into opposition with the rotund. We may note this effect everywhere in architectural detail and mass. It is displayed in crude boldness in the rusticated column, as in our rough isometrical sketch, B, Fig. 1. In any consideration of the principles governing harmony in architectural form we consider this effect paramount, because, wherever we may look, curve and angle, in their solid presentation, are offered to the eye.

The effect represented in B, Fig. 1, may, therefore, be considered to be the most crude and potent means of gaining effect by the opposition of curvilinear to rectangular mass. We cannot, justly, term it vulgar. It is crude and elementary; but vulgarity does not attend the vigorous handling of simple form, but the showy ostentation of high involution, as in a parade of unreasoning detail in great complication. We should undoubtedly revolt at the idea of rusticating the columns of a refined Classic temple; but objections to rustication, as such, are futile, and the more so because, beyond any special æsthetic effect that may per-

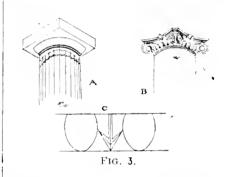

tain, is highly expressive of constructionalism—the basic attribute in architectural effect, that we miss in wholesale homogeneous casting, as in ferro-concrete. We may take it, then, that the value of the sonare blocks in rusticated columns is to give emphasis by opposition, or a species of contrast, to the rotund drums of the columns. We should not get the same effect by employing circular rusticationthat is, by the alternate insertion of drums of diameter beyond that of the column proper. In the same way, square pedestals to column bases must enhance the rotundity of the drums and of the circular-planned base-moulds. In Fig. 2 we give three bases, with round, multangular, and square pedestals, roughly sketched in isometrical perspective. The effect upon the column of base A—its smoothness and rotundity—is neutral; base B, by its angularity, sets off the rotund, but since this effect is an approach towards the circular, the opposition of character-the mutual enhancement of form-cannot be so powerful as in base C, where the cubical mass gives the Inllest foil to the column and circular base-mould. These several points we do not note in elevational drawings; nothing of the angular effect is, in such representation, presented; we do not see the

rotund swing of the mouldings or the elliptical drum-joints. Yet, strangely enough, some writers set out to criticise and expound the ultimate effect of architecture by direct and sole reference to elevational representation. In Fig. 1, D, we have a further representation of contrasting rectangular (perspective) mass, and the rotund of drum and dome. Elevation gives nothing of this, but a plan

and dome, G and F, the contrast to be anticipated where viewed in perspective, opposed to the rectangular mass as E.

The considerations we have offered should afford some kind of base of reasoning respecting the pure aesthetics of such a building mass as the aggregated rectangular and curvilinear forms of Fig. 2. D. Assuming fitness for constructional duty, and discounting the effect of colour and texture, and allowing, also, that the joint-lines of the masonry sketched are

potent in architectural expression, we must conclude that the pure aesthetic resultant of design refers in direct manner to the bald composition as determined by the plan or contour of the masses, and that the correlation of square to round are basic in ultimate eye-effect. Admitting so much, the remaining effects are produced by that operation in design which we call "proportioning." The rela-tive ratio of sets-off and the size of the rectangular and curvilinear masses must largely determine the ultimate effects, and we cannot, in analysing these effects, draw conclusions so simply as in the plain, square and round of "rustication." In some way the curved and incurved parts relate and react. The curved— belied --and the incurved must be mutually enhancing-by opposition-and both are foil to arris of rectangle. Our bald representation, shorn of any colour or texture, must be an object of interest only so far as the proportion of areas is concerned.

As presented to the eye, in the sketch, these masses, whether or not specially elegant, appear suitable as means, say, of upholding arches, and in the effect of the sketch we must allow for the unsightly absence of caps or impost of any kind. But how far fitness, or association, or a combination of such, affects general aesthetic considerations may be easily comprehended by turning round the sketch and viewing it from either side and thinking of horizontal members of architecture. We cannot ignore fitness, but it does not assist us greatly in rengenerally indicates, as by circles of drum dering the bare demands of constructionFig. this series of the necessary of pure as the ties of

s ries of alternate light and shade, and when light concentrates in points, as at the angles and arriss, a vivacious, sparkling, "staccato" impression is left up n us. When light glows and gradu at s. as on illuminated curved surfaces. such seem to represent a divergency of effect that is pleasing mainly by opposurem of character. Light spread out in includations and light scintillating in points seems to be the cause of graceful appearance, whether in mass or detail, it in place of two dimension design and solid perspective we base our consideratrons, in harmony of form, upon charos are. In our recent article on synthetic architecture we gave a deagram of a curvilinear figure within a triangle. We gave this as packing within a small compass the whole principle of opposing the curvilinear to rectangularity, and we give herewith a further diagram I the egg and-tongue enrichment, which, again, reduces the essence of the principle to the opposition of smooth rotundity to arms-head acuteness. When the eve has long regarded red it the more forcibly appreciates green; when we have long looked at the round, we turn with relief to the acute in form. This principle rules in every one of the examples that we have given. We say that an object is square to a great extent because we thereby definitely declare it not to be its opposite, i.e., round. We cannot have much more pronounced opposition form-character than is discoverable in the egg and the arrow-heal, and we may here see how mustaken is the idea of the designer who seeks to pervert the best types of ancient example, with its sharp arrows tigues and raz r-like edged shrouding to the elegant and regularmodelled rotund ty of the egg, by substi-tuting between the available ets dull and blunted forms. A powerful and harmonious contrast is prickly helly leaf against natural \*zz We obtain here not merely contrast of form, but also of colour and texture. Contrasts in the design of gramental enrichments need to be hold and effective. In the deep lark capital the vizour of the florations is a ally opposed in carve and reflex and and trip set to carve and truck and e-e avening caustic, but the small, under-ent indentations enhance the general varied lumin sity of pure white marble e-sparkling sun and shadow dapple.

The strong of Eviter has submitted to an interest spead works. The scheme new to pased with Modding is estimated to a \$1.571. The corner will submit this come to the Lord Government Board, leaving to Beard to decide whether it should be prome hard rower deferred until the constant of the war.

COMPETITION AND CONTRACTS.

The last "Monthly Letter" of the Master Builders' Association of Boston, Mass., U.S.A., contains the following appeal to American builders by the directors, much of which will be read this side with interest.

#### WHAL IS COMPETITION?

The use of other methods for handling or awarding building contracts, in preference to the badly misused competitive plan, seems to have gained most favour in the vicinity of New York. This is at first surprising to those who look upon New York as the natural home of the sharp-fanged wolf, the rare sabretoothed tiger, and of the original Wall Street for smong such fauna, they might say, does modern cut throat competition in the business of building flourish like the proverbial green bay tree. And yet, even should these prejudicial opinions stand the white light, it is natural enough that a district suffering most should seek relief the most diligently.

At West Point, where our National Govern-

At West Point, where our National Government has been spending millions for building construction, the cut throat competitive plan was used as long as possible—until altogether too many buildings were being completed by the bondsmen of the contractors. Then followed the plan of letting work on a cost and commission basis, with a maximum guaranteed, and with a further commission to the contractor on any savings effected and bringing the final price under the named maximum. The percentages were so arranged that the contractor made more money by saving than by spending—a pi-caution found needful when dealing with—shall we say anybody in "inde teiness" !—yes, lonsiness ethics are peculiar. This power plan, or some modification of it,

This newer plan, or some modification of it, is growing in favour even around Boston—for anyware by taking thought may see that to compare a half-dozen contractors and their prices is like comparing a half-dozen tailors. If the six are chosen very much at random, the suits they make may vary in price between 2 000 dollars and 60.00 dollars while a more are full selection will get a variation in price between 45.90 dollars and 60.00 dollars. But what is the use of doing it? And why does the 60.00 dollar-man stay in business? Of course, it is because he is not put into price competition with the others all of the time—and yet even, the lowest-priced man has his plane if he does horsest work worth the price he charge. Owners realise this with a suit of dathes—for they have had the experience of haying such things every season. But building a different the but the only difference in treatment is on account of the typical account is held a knowledge and Leyerience or provided the price of the season of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the price of the pr

ewner's lack of knowledge and experience. Owners, as a rule, are misled by three things. First of all, the plans and specifications of their architect are set up by them as a standard for what they want done in the way they consider proper, and they assume these documents, coupled with the architect's superintendence, to be sufficiently compelling to obtain these desired results from any contractor at any price. As stated, the last few words signify an extreme case; but to an extent this is the viewpoint of the typical owner. Architects do not believe it, for they know that words are not capable of expressing what is wanted no quality of result, and no standards are available for comparison. An architect's interpretation of desired and proper quality cannot be enforced on a contractor incapable of giving it, he he ever so willing to do so; and can still less be imposed upon a contractor not wanting to give it. If, perchance, the contractor then wins—for a question of quality in building operations cannot be appreciated by a jury. (A review of scores of cases in several States shows the truth of this statement. A jury recently declared that a plain maple floor was good enough, and satisfied a requirement calling for parquetry flore in a set of the contractor and calling for parquetry flores.

The second point in the misleading of the owner is in the bids themselves. In spite of average care in the selection of bidders in a connection, the bids received will vary widely

the low being so far below the lich that the typical owner feels sure that estimating is in exact, and that there is little about the price which will much affect the result has will get. Then, as a thirl feature of his mideading-

1 gets no later opportunity to learn differ

ently—unless his work is very poorly done-for when he begins to spend, in driblets per haps, but yet to spend, for repairs and thinghe did not "expect to spend money on so soon, Heaven knows," but then "everybody's -even then Mr. Owner does not doing it have an opportunity to learn that perhaps his neighbour's outlay for upkeep is one quarter of his own, nor possess sufficient impartiality to see that his neighbour's property continues to look fresh and in good condition, while his own does not.

It would be feolish to allege that an owner. in accepting a low figure, expects, usually, to get what he does not pay for. He believes that variations in estimates are due to inaccuracies or to larger profits taken by higher-priced men. Neither is true. Estimating is an exact science. A careful contractor, working on good plans and specifications by an architect with whose work he is familiar, gets his cost within two per cent, on new work, and will average but little higher on altera tion work. A low-priced man can easily make as much money on a contract as a high-priced one—unless the low price is due to inability.

Many an owner, on small work, has been impressed with the argument put out by small contractors that they can work cheaper because they have not so much expense to carry. And yet the man assenting to this argument may himself be in an organisation which knows by experience that up to a certain limit (?) the larger a business is the less it costs to do a thousand dollars' worth. The lowpriced man is low, usually, because of a difference in quality of result. An owner who relies upon his architect to produce a proper result under all conditions is very often expecting the proverbial silk purse from a sow's ear. Good architects do not claim to do it—and the most successful among them aim for good contractors and shun those not doing the grade of work they want to get. A leading Boston architect voiced this opinion in saying. "Architect and contractor must both be good or the result is poor.

What is competition?

Competition is the life of trade. Competition is the death of trade. Your choice of phrases will vary as you are a buyer or a seller; as you have downed a competitor or are being stifled; or, you

may say, competition is the other fellow after my job, the other man after my customers, the fierce struggle for life and means.

Competition! Unions will have none of it. neither will socialists nor capitalists

What is competition?

Is it the success of the strong, well-managed, and efficient over the shrewd, the tricky, and the deceitful? Obviously not when price is a large factor in the resultalthough the reverse may be true. One writer calls it a legalised form of struggle for annihilation in modern life. Any proposition that contractors, or any other producers, may be encouraged to ruin each other in order that the community may get something at cost or less is unworthy.

Trade has always had one meaning synonymons with trickery, and any business man need only recall personal experience and observation to know that business with its competition has been at best only a war of wits in a games the rules of which are busi-

ness ethics. Business ethics—what are they? Certainly a very peculiar brand.

And what of competition at its worst?

And who suffers from the results? In the business of building he is called the owner. Does he know this? No, not at the time: usually not at any time.

What is competition?

On a bank alteration iob an alleged ambiguity in specifications led to one contractor's success. He found, after he had expended about one hundred dollars on the job, that the architect was expecting him to do things he had not estimated to do. Inquiries easily established the fact that four other bidders had all included the items in question—the successful one had not. Owner, architect. and builder each paid one-third of the cost of the error, about three hundred dullars each. But what of the unsuccessful bidders?

On a house some distance from Boston, work he about ten years ago, three bidders figuring reasoning?

about alike were above the price set by the owner for his expenditure. The architects a leading firm, told him he could cut his requirements, or could get another series of hids from men doing a lower grade of work. He chose the latter alternative, and his house was built within his price.

On a job of interior finish, some distance from Boston, three or four years ago, three Boston bidders doing a similar high grade of work were within one thousand dollars of 137,000 dollars. The work was let for 92,000 dollars in another city, and, even after adding on an acknowledged error of dollars, the successful hidder would still have been 16 per cent, under the Boston men. None of the Boston men would have made over 15,000 dollars on the job.

On a small job in a small town, five figures were 9,500 dollars, 9,300 dollars, 9,000 dollars, 8,900 dollars, and 6,600 dollars. What is obviously within a few hundred dollars of the right price? The owner was delighted at the low price. Why should be have been?

On a recent bank alteration job with six were eliminated after the bidders four bids were in because they were not local men. Refiguring of cuts was done by the other two, and one dropped bids were in local men. F one thousand dollars more than the value of the cuts (finding he had to do so), and although still high was awarded the job because he was a depositor in that bank, while the other was not.

On a job in 1912, where cuts were figured. one competitor dropped five hundred dollars where twelve hundred dollars' worth of stone mason's foundation work was changed from stone to concrete in location where materials for either were easy to get. Cuts offer a splendlid opportunity for one man to drop by another, and win by—in fact, submitting a second figure when he surmises his first

one was a little too high.

Recently sub-contractors for painting figured so eleverly that the lowest on a job was 650 dollars and the highest 2,180 dollars with enough good men together around 1,500 dollars to show that probably there was the right price. Some contractors figuring would use the low figure: others not wanting to must do so, or risk their chances of winning. This element is a common feature of competitive bidding.

In September, 1915, a reputable Boston architect of a fairly large job stated that the owner had a fixed price set for his work and that he had purposely selected a list of bidders commonly varying widely in price and in quality of result. From them he had chosen as good a man as he could, and come within the price established; and he said that he regretted not being able to choose

a better man.

Two or three years ago an owner, who formerly let a contract to a bidder about 20 per cent, under a group of competitors, who was not satisfied with the results and obtained, strove to mend matters upon some further work by a most stringent three years' guarantee—the strongest document of the sort ever seen by Boston contractors who estimated the work. This document was the work of the owner, not of his architect. Here was a direct intent to make a silk purse out of a sow's ear by legal verbiagefollowed, if needed, by legal procedure.

A few years ago a very hard-fought large

job near Boston was awarded to the contractor fourth from the bottom in a list of six bidders. Later he was told that the owner always intended him to do the work. Later he was told that the

Recently on a job a few miles from Boston the owner told one bidder that he wanted him to do his work, and that he would pay a preference, but not a large one. The ent to another man, who by the use of two sub-contractors, whose bids the preferred man had, but did not care to use, saved more than the difference between the two figures.

In 1915 a job near Boston had four bidders within a fifteen hundred dollar variation figuring around 62,000 dollars, while a fifth was about 59,000 dollars, and won the award. What will happen to the winner and to the work he does? What was the owner's

" Fime is of the essence of this contract. How often this is written! A year ago large job was let to be completed August 15, On October 1, 1915, it was nearly done. A contractor's promises for time are commonly taken in preference to an examination of his performances.

Not long ago the wife of an owner told a triend about to build to put a forfeit clause 10(to his contract, for the reason that it could always be collected, for some reason or other,

and was a good way to save on a contract.

Recently an architect asked for two bids from general contractors. With one of these the architect was in league to the extent of giving him competitors' prices in order that he might bid under them—and the other contractor knew it—and knew the owner. After the bids were in he approached the owner, thus: "Now, Mr. Blank, I have a grudge against Smith, my competitor, and I can work it out and show you how to make a thousand dollars if you will give me fifty dollars." Mr. Blank agreed. "I will go to your architect, claim I made a mistake, withdraw my hid, put in another one, one thousand dollars lower; your architect will tell his friend, who will do the same thing. You will make a thousand, and can then send me tifty." It was all done as planned.

On a job of plumbing worth 750 dollars a low hidder was awarded the work at 475 dollars. Recently, two years later, alterations were made, and the hot and cold water piping, specified "iron-sized brass"—a good brass pipe-was found to be gilded iron. meant that the architect was either ignorant.

careless, or dishonest.

What is competition?

The above cases, excepting one or two, are typical instances of occurrences which are very common-so common that they would not be worth reciting were our readers only those familiar with building operations. The cases quoted are not garbled or exaggerated, but are normal, and are all actual happenings.

What is competition?

The statement that a careful contractor gets his estimate costs within 2 per cent, was carefully qualified to apply to well-made plans and specifications, and to an architect whose methods the bidder is familiar. Architects vary widely in their methods—not affecting the quality of the result—and in their requirements in developing scale drawings from which estimates are usually made. Contractors knowing the architects of Boston (for example) can vary their figures according to the personality or office practice involved. This variation may, on the average, amount to 2 per cent., and is something for which. of course, a contractor figuring for a strange architect cannot allow.

Beyond the personality of the architect lie the plus and specifications-varying widely in definiteness and accuracy from a very low limit, amounting at times to guesswork upon many points, to a degree of perfection, leaving no element indeterminate which affects the estimate-and this latter accomplishment means some knowledge of how an estimate is made up and of what features affect cost, for no plans and specifications issued for estimating can ordinarily tell everything needful for the execution of the work. Here, again. a contractor's general familiarity with the architect's personality and usual customs are a great help.

What is competition.

The story is told of a contractor in Greece who stood before a statue of a famous oracle. which—following a custom of this perch."

Hermione, and others—" came off his perch."

Why and walked up to the contractor. "Why this variation from proper statuesque practice?" said the contractor. "Are you not." replied the oracle, "the man considered dis-honest until proven honest; the man who has to know what is in an architect's mind when he draws a line; what 'suitable,' 'approved.' to know what is man and the draws a line; what 'suitable,' 'approved.' 'satisfactory,' and 'practicable' mean as he uses them; and how 'reasonable' he is going to be; and do you not have to forecast prices on materials, and particularly on labour with variations beyond your control?" "Cervariations beyond your control?" tainly." said the contractor: "but that is my pob, and I am used to it". "I am something of a proplat myself," said the oracle:

y favour. tractor walked a vay alor the tersdactio in that kind of a bust Cast, as in estimates, as commonly the cast and average case the lew cast 20 per cent, under the high, that it a new of understanding of an cast has plans and specifications at the estimaters are involved. The cast is in so hacases would probe tax-sect their oper cent, and this color of the interference with a cast to a good architect a poor to work to be a good architect a poor to work to be cast, and to be a good architect a poor to work to be cast, and to be cast. The balance of a go variation in bids is from other cont. ... in estimates, as commonly a year of the to clow. The balance of a 20 variation in bids is from other largely the use of sub-contractors madry of the result. These two to are related, but a good general conas took, squeeze, capole, or drive sub-ners revise low that only poor work from or solitarned. er leavourms to gain at the same time. This definition in itself seems sufficiently clear be easily comprehended by all of us. But what has become the meaning of the word as applied to the building business; what is it as we really understand it !

To such extremes has the meaning or convord been distorted as to almost blot out its primary definition. Competition in feats of provess or skill or art always has meant, and always will mean, only strength, agility, personal excellence, and quality. Why should the excellence of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording terms of the convording

it not mean the same when applied to work? Unfortunately, we have grown to associate this word with one consideration only—that price; and the word to-day often means endeavouring to gain what another wants by the exercise of cupidity, without regard to perfection, excellence, or quality. Such sompetition is unfair and is based on the policy of "each one for himself and the devil take the hindmost." Those conducting take the hindmost. Those conducting their business along these lines show an utter disregard for the rights of others. Competi-tion in the form of mere price comparison is the most degrading form of competition to those who indulge in it. As has been said recently: "The only phase of competition which can benefit humanity is quality competition, and that is the exact antithesis of price competition. The two cannot ride in perice competition. The two cannot ride in the same boat. When price competition begins, quality competition ceases. We all know that to be a fact. Why should it not be adopted as the fundamental principle

not be adopted as the common of the building business?

Where did the practice of awarding the business bidder begin? What excuse has such a practice for existing? is impossible to secure the best or even good

work by such a method.

Why should not the Master Builders' Association take the initiative in an attempt to correct this method? Why should it not lead in an earnest endeavour to persuade architects and owners to abandon this pracarchitects and owners to abandon this practice and adopt a new one? Suppose, as another suggestion, they were to award the contract to the "average" bidder; would not this retain all the essentials of competitive bidding, eliminate all temptation on the part of the bidders to "skin the job," and secure for the owners better results in accordance with the true intent and meaning of the ance with the true intent and meaning of the plans and specifications

Mr. Owner, does all this mean nothing to Are you in the position of an interested listener to a Sunday morning sermon-which is a dandy and just fits the other fellow? If so, awake. The welfare of each of us helps us all, and in this case you, as well as ourselves, will benefit from these truths exacted

from a burdensome experience.

The Roscommon County Council have appointed Mr. M. J. Leech to the position of assistant county surveyor, to succeed Mr. Dolan, deceased.

RURAL DWELLINGS IN IRELAND.

Last Wednesday evening a general meeting of the Architectural Association of Ireland, was held in the Hall, South Frederick Lane, Dublin, when the principal feature of the evening was a lecture by Mr. T. J. Byrne, A.R.I.B.A., clerk and surveyor to the South Dublin Rural District Council, upon "Rural Dwellings in Ireland,"

Mr. Leask, president of the association, occupied the chair, and the minutes were read by Mr. N. Giron, hon, secretary,

Mr. John O'Donohoe was elected a member

of the association. Mr. T. J. Byrne, in dealing with the sub ject of his lecture, said that at the present time every district council in 1reland had built some cottages for labourers living within their borders, and the cost of erecting such cottages had been very small on the varying from the tenth of a penny in the £ in Clitden, County Galway, to twelve and a-quarter in Gortnahoe, Tipperary; £8,950,000 odd had been spent by the Government in this direction; 53,868 houses had been built, with the result that over 325,000 persons had been decently provided for. Nearly 150 years ago the conditions of labourers dwellings were as rotten as they could be, although in the year 1767 people were walking through large streets in the cities and building imposing dwellings. The conditions under which the labourer lived at that period were very bad; anything was considered good enough for him. The lecturer went on to contrast what was thought good enough for the labourer even so recently as the year 1873 with the great strides made up to the present day. Rural authorities had been better financed and given a much larger scope. In 1906 a great advance was made when money was available at a much lower rate of interest. Four and a-half millions was sanctioned then, and at the same time every effort was made to make all the houses much more decent and commodious.

Mr. Byrne, who exhibited several score of interesting drawings, which showed the various stages in the development of labourers' cottages, then explained in detail his minimum ideal of what such a dwelling should he. He considered, for one thing, that no cottage should have less than four rooms, and, in the metropolitan county at least, should have a water service if sewers were convenient. would also be in favour of what were known as "parlour honses" in Belfast, where a little room could be provided that would not be immediately entered from the front door. Mr. Byrne then went on to deal with the extensive work which had been accomplished by his own council, the Dublin Rural District Council, and he was glod he was working for a council which recognised this great public necessity-(hear, hear)-and of the fact that they had given him Mr. Geoghegan as assistant architect. His council gave the most careful consideration to planning, and he was gratified to them for the latitude they had always given him in the details of construction. (Applause.)

A hearty vote of thanks was accorded to Mr. Byrne, on the motion of Mr. Edwin Bradley, seconded by Mr. R. M. Butler,

A commission in the Royal Engineers (Tunnelling Section) has been granted to Mr. E. Potts, assistant to the Rotherham borough surveyor.

Difficulties attending the construction of the headquarters of the Theosophical Society in Bleomsbury have now been overcome. When Bicomsbury have now been overcome. When the building is completed, it will have cost £200,000 instead of £40,000, as originally contemplated. Three years and a half have elapsed since the scheme was initiated. The builders' lock-out accounted for a delay of twelve months after a portion of the place had been erected, and then the war and other matters stopped the resumption of work. Now building operations have recommenced, and St. Paneras Borough Council has been informed that the financial difficulty has been removed, as a wealthy person has come for formed that the linancial difficulty has observed, as a wealthy person has come for ward and agreed to complete the building, which will have frontages to Tayistock Square and Burton Street. The architect is Mr. E. L. Lutyens, A.R.A., and we published the plan and perspective of his design in our issue of September 6, 1912.

#### THE LONDON COUNTY COUNCIL.

At the meeting of the London County Council held vesterday (Tuesday) afternoon the Finance Committee recommended that sanction be given to the horrowing by the Hackney Borough Council of £9.362 towards the cost of street improvements in Mare Street Upper Clapton Road, and Ball's Pond Road by the Hammersmith Borough Council of £16,000 in respect of the acquisition of property for an improvement at Hammersmith Broadway; by the Islington Borough Council of £985 for the purchase of electrical pressure-recording instruments; by the St. Paneras Borough Council of £15,000 for turbo-generator and building work in connection with their electricity undertaking; by the St. Marylebone Borough Council of £3,800 for mains and house services in connection with their electricity undertaking; and by Wandsworth Borough Council of in respect of the High Street and Felsham Road improvement.

The General Purposes Committee reported with regret that Mr. Arthur Maxwell Phillips, senior assistant in the Architect's Department and captain 14th Service Battalion the King's Own Yorkshire Light Infantry, has been killed in action. (Captain Phillips, who resided in Wolverton Gardens, Hammersmith, has been a Lighting 1212). has been a Licentiate R.I.B.A. since 1911.)

The Building Acts Committee stated that on November 23 last they reported to the Council that under the Council's General Powers Act of 1909 they were advised that the regulations made in July last under Section 23 of that Act with regard to the construction of buildings wholly or partly of reinforced concrete, and with respect to the use and composition of reinforced concrete in such construc-tion, must be published in full in the Landon Gazette at a purposeless expenditure of £180 The committee had been before the meeting of November 23 and were in communication with the Local Government Board, whose officers had endeavoured to arrive at arrangement whereby, with the consent of the Treasury and the Stationery Office, a sub-stantial saving of the Council's money might be effected. These efforts had not, however, met with any success, and the regulations must, therefore, be published in the ordinary way.

The Finance Committee stated that they are "strongly of opinion that the proposed expenditure, which both the Local Government Board and the Building Acts Committee admit will serve no useful purpose, is most difficult, in present circumstances, to justify, but in view of the legal necessity for advertising the regulations, and the failure of the efforts made to reduce the expenditure thereon, there appears to be no alternative but to submit the estimate.

The Establishment Committee recommended that the operation of standing order No. 342 be suspended, in order that the services of two assistants on the unestablished staff of the architect's department, who have attained the age of 65 years, he retained up to and including January 31, 1916.

#### ---THE R.I.B.A. EXAMINATIONS. THE FINAL: ALTERNATIVE PROBLEMS IN DESIGN.

1. The drawings, which should preferably be on uniform sheets of paper of not less than imperial size, must be sent to the Secretary of the Board of Architectural Education, Royal Institute of British Architects, 9. Conduit Street, W., on or before the dates specified below.

2. Each set of drawings must be signed by the author, and his full name and address and the name of the school, if any, in which the drawings have been prepared, must be attached thereto.

3. Ail designs, whether done in a school or not, must be accompanied by a declaration from the student that the design is his own work and that the drawings have been wholly executed by him. In the preparation of the design the student may profit by advice.

4. Drawing for subjects (a) are to have the shadows projected at an angle of 45° in line, wonochrome, or colour. Drawings in subjects

(b) are to be finished as working drawings. Lettering on all drawings must be of a clear, scholarly, and unaffected character.

#### SUBJECT AXV.

(a) A Small Public Library. The building to be on an open "island" site, and is to The building is to be on an open "island" site, and is to cover an area of 70 ft. by 40 ft., exclusive of projections. It is to be faced with stone, and should contain a lending library, magazine room, reference library, committee room, heat ing chamber, rooms for a resident caretaker. and usual offices.

Drawings: Two plans, three elevations, one section to  $\frac{1}{8}$ -in, scale. Detail of small portion to ½ in. scale.

(b) A Municipal Gymnasium. (b) A Manacopal Gymnasium. Lo be a detached building on an open site. The interior dimensions of gymnasium are to be 60 ft, by 35 ft., and the building is to contain in addition an entrance hall, office and pay box, changing room with lockers, lavatory and shower baths adjoining.

Drawings: Two plans, one elevation, one ection to bin, scale. Detail of roof over section to  $\frac{1}{8}$  in. scale. Dogymnasium to  $\frac{1}{2}$ -in. scale.

#### SUBJECT XXVI.

(a) A Roll of Honour—A monumental tablet in a church, bearing the names of parishioners (male and female) who have served in the Forces, or as doctors and nurses in the hospitals, and have given their lives for their country in the war. The tablet to be their country in the war. The tablet to be either of stone, marble, or bronze, used separately or in combination. It is to be fixed on a blank wall inside a parish church, and the space it should cover is to be approximately

15 ft. by 8 ft.

Drawings: The tablet and details to oneeighth full size. Details of mouldings and
lettering to full size. Details of mouldings and

(b) 4 Cottap Hospital for both Sixes, to Accommodate Twenty Patients (not infectious cases).—All suitable rooms to be provided upon an open site of four acres, approached from a main road.

Drawings: A block plan showing drainage, to a small scale; plan, elevations, and section,

to a-inch scale.

#### SUBJECT XXVII.

(a) A Town House in a Terrace.—Centre to centre of party walls, 25 ft. Cost not to exceed £4,000. Roadway in front is 50 ft. wide.

Drawings: Plan of each floor, cross section, back elevation to 1-inch scale, front elevation

to 1-inch scale.

(b) Small Warchouse in the City of London for woven goods. Centre to centre of party walls 25 ft., depth 60 ft. Main building 40 ft, deep above the ground story. Work-people's entrance to be at the back from a back street. The building is to contain a basement, ground floor, and four stories above; office and counting-house are to be provided.

Drawings: Plans of basement, ground, and first floors. Front elevation, and cross and longitudinal sections, to  $\frac{1}{8}$ -inch scale, with constructional details to 1-inch scale.

With a view to restoration, the interesting with a view to restoration, the literesting double piccina, near the high altar in All Saints' Church, Maidstone, has been cleared of the accumulated rubbish which, the viear says, has been allowed to choke its deep drains ever since the days of the Puritan iconoclasts who first damaged it and the canopies of the allowing colding. adjoining sedilia. Amongst this rubbish Mr. Malyon, the verger, has discovered some in-teresting remains of fifteenth-century stained glass, presumably from the great east window. These fragments comprise the lower half of a These fragments comprise the lower names, figure of a saint in flowing white robes, because of the spangled with yellow rosettes, which had become broken into about thirty separate pieces. These have been joined together. There are These have been joined together. There also some pieces of ruby and blue glass.

### NORMAN CASTLES IN SCOTLAND.

Mr. Wm. M. Mackenzie, secretary of the Royal Commission on Ancient Monuments (Scotland), delivered a lecture to the members of the Edinburgh and South-East branch of the Historical Association of Scotland in the geography classroom of Edinburgh University last Friday night.

The lecturer said the private castle, that was the castle in the ordinary sense of the term, was introduced into this island by the Normans. The word first appeared in the Anglo-Saxon Chronicle in 1048 in circum stances which showed that the thing as well An historian of the as the name was new. An historian of the Conquest expressly said there were very few in England at that time. What sort of structure the ordinary Norman castle was appeared on the Bayeux tapestry, from which several illustrations were shown. These, with illustrations were shown. These, with accounts from various French and English chronicles, proved that its essential feature was a mound of earth, known as a dungeon. more familiarly as a mote, on which the de-fences of tower and wall were constructed of These terms in time changed their meaning. A large enclosure on the level was also palisaded with timber, and was known as a bailey. Each division normally had an independent ditch.

Reference was made to the herisson or prickly hedge in advance of the ditch—the mediaval equivalent of barbed wire-as it figured in the description of Scottish attacks upon English border castles in a French poem of the twelfth century. In Scotland there had been confusion as to Norman castles owing to a belief that these must have been great stone keeps. Now that it was known what to look for, the mote or mote-and-bailey earthworks were found to be numerous and present over the greater part of Scotland, indicating the thoroughness of Norman penetration, and probably, too, a following of Norman example. No precise figures, however, could be given till the archæological survey was completed. So far a dozen were allotted to Wigtown, twenty-six to Kirkcudbright, and nearly as many to Dumfries, but one only to Berwickshire. Many must have disappeared either by levelling or under sub sequent building. The type seemed to cease at Dunskaith, on the north side of the Cromarty Firth, where the traces of the castle of 1179 were still distinct, but there were two cases in eastern Sutherlandshire where a mote foundation for a later stone building was strongly suggested. Examples were shown on the screen of various types of mote castles in Scotland. Mr. Mackenzie said there were certain puzzling features still awaiting expla The wooden "peel of the War of nation. Independence was substantially a revival of the same sort of fortress as had been used to subjugate England at the Conquest.

The town clerk of Edinburgh has been instructed to draft a town-planning scheme for Craigentinny.

Mr. James Wykl, urban surveyor to Clayton Urban District Council in the West Riding, has just completed a housing census and finds there is not a single house to let. A housing scheme has been prepared, and an inspector from the Local Government Board has viewed the proposed site.

A serious landslip in the Clarence Gardens, Scarborough, has been in progress for some The slide has reached such dimensions that, following upon a report from the borough engineer, the corporation have decided to approach the Local Government Board for permission to proceed with the work of repair.

Mr. D. Y. Cameron's picture of the castle of Craigievar, after being for some time on loan in the Aberdeen Art Gallery, has been presented thereto by the Hon. Gertrude Forbes-Semphill. The landscape, with "castle set in its own valley twixt the two main ways of the Dee and Don," was exhibited at the Royal Scottish Academy in 1900. Royal Scottish Academy in 1909.

Alderman William Urquhart, of Mapesbury Court, Shootup Hill, and Church Street, Paddington, and High Street, Notting Hill, colour for nearly fifty and varnish manufacturer, for nearly fifty years a member of the Paddington Vestry and Borough Council, and formerly a member of the London County Council, who died on Soptember 7, left £7.442 personalty.

counsel on their side and three for the determents, this will come out as a costly busi ness, even regarded as an advertisement. In fact, the expense of all this legal fighting s enormous to the parties concerned, and in the way of pidicial time to the mation. Mr. E. P. Hollams, a retired solicitor, who was in practice for thirty three years, put the cost to suitors in cases of this kind at £1 a mimite, in his recent letter to the Times, where, as he so well says, the time of the judges is wasted by the way counsel, at high fees and daily refreshers, conduct cases Much mischief and expense are also caused by the wholly unnecessary length and complexity of modern pleadings. No doubt the matter has still to go before the Law Lords, Meanwhile, it is to be noted that so far only the question of infringement has been settled, and the greater point, raised by the defendants, is to the validity of the plaintifts' patents, has not yet been decided or fully

The Browning Settlement in Walworth, which so brating its coming of age by planting twenty one trees in a street that needs them badly, has been a busy source of reforming ideas. Its name commemorates the tact that it is housed in the old chanel to which Browning was taken by his parents to worship when he was a boy. Its minister in early days was the Dr. Andrews from whom the young Ruskin took lessons, and whose daughter was, according to the London correspondent of the Manchester Guardian, "the Angel in the House" of Coventry Patmore's noem. The head of the Settlement, Mr. Herbert Stead a brother of the late W. T. Stead, and the late Mr. Frederick Rodgers worked together to popularise the idea of old age pensions many years before there was any chance of Government action. The Queen's Fund for the Unemployed, opened in 1904, which was the first important effort of the kind, originated at Browning Hall, and the conferences that were held at the hall on housing and transit facilities prepared the way for the appointment of the Royal Commission on London traffic. A large increase in the number of public gardens in this part of South London in the last fifteen years is due very largely to the propaganda carried on in the Settlement.

The nonmonger claims kinship with one of the oldest crafts in the realm. Mr. Allen Walker, lecturing to London University students in the hall of the Ironmongers' Company, traced the corporate history of the trade back for nearly 500 years. It was not [11] 1455 that they received their coat of arms a shield containing three pieces of nor, the symbol of the wholesale departthe ut, and a number of links of chain, the mind of the retail department, the supparters of the shield being two salamanders. Later still, in the reign of Edward VI., they b' and the r charter. Henry VIII, was not to particular as to his methods for obtain money and he robbed the company of  $\mathbb{A} \mathbb{Z}^{7,r} \otimes \mathbb{A}$ . A portion of the plate was inclted the or that occasion, and the remainder the serificed to meet the demands of Os mosellon Parliament. The iron Cosever were loyal to a man when bits of the realm was at stake, and but and fitted out at their own ex one complete ship for service against

TORATION OF A 14TH-CENTURY BEDCHAMBER IN FRANCE, RESTORATION

This handsome water-colour frawing was. shown last summer at the Royal Academy in the Architectural Gallery. The subject is unusually interesting, indicative as it is of the traditional simplicity of daily life in the Middle Ages. It makes an excellent picture of the period, architecturally speaking, as well as showing the type of furniture in those days in common use in the homes of the well-to-do. To judge more correctly the pictorial merits of the drawing, which the artist, Mr. Leslie B. Cook, has lent us, it is necessary, of course, to see the original water-colour. This restoration has been worked out as an attempt to realise a scheme to be judged as a whole more or less in accord with the 14th Century, this being the date of the building of which this chamber forms an important part. The beams traversing the ceiling are of oak, some of the chief timbers being chamfered. The bigger or main joists and wall-plates are supported on stone corbels, which are carved and coloured with heraldic bearings and rebus devices or monograms connected with the history of the owner's family tree. The old ashlar stone walls are partly covered with tapestry and banners, mostly of a crude colouring toned down by time. The floor in this room is paved with random slabs of stone, mostly paved with random slabs of stone, mostly irregularly shaped and of varied tints, which artistically is no small advantage. The floor is relieved of its sternly primitive character by skins and mats. Tiles of quaint patterns occur in parts of these rooms and add to the imaginative spirit of romance suggested by such a study of old work. The bed shown Mr. Cook is similar to that in the house, and described as a fine example, typical of its date. It harmonises very well with the stone-hooded fireplace, and serves to complete an ungratiating composition.

#### MEMORIAL TO A GREAT WAR

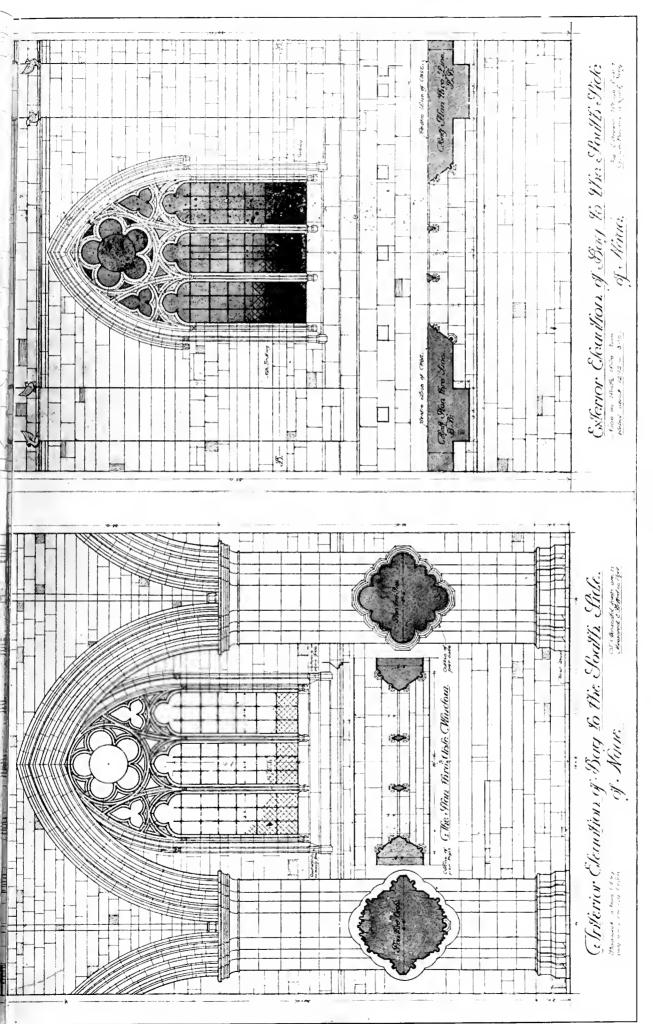

This drawing was hung on the line at this year's Royal Academy Exhibition. The conception of the design is based on the Victoria Cross, adapted to the plan of a war memorial for a site situate on high ground, commanding extensive views of the surrounding country. The structure is approached by four wide flights of steps between the four arms of the cross, which latter are treated The structure is approached by as bastions, the outer face of these being sculptured with the figure of the "Spirit of War" seated in the mouth of a huge piece of artillery, and below on either side are placed attendant winged lions. At the top of the steps and connecting up the four bastions is a massive screen, comprising a deep plain frieze supported at convenient intervals by winged Hermes, which are intended to by winged Hermes, which are intended to represent the idea of sentinels encircling a large domed Hall of Trophies boldly occupying the centre of the composition. The whole scheme is more or less Assyrian in feeling, and would be carried out in a grey-green stone with bronze doors and grilles. The original water colour, reproduced herewith, is by Mr. William Warman, of Bodiam. 62. Arthurdon Road, Brockley, the architect of the design.

# BRIDLINGTON PRIORY CHURCH, YORKS: DETAIL OF ONE BAY OF THE NAVE.

Some particulars will be found in THE BUILDING News at December I of this famous priory church. We then gave a sheet of letails of the North Porch delineated by Mr. Gordon Hemm. To day we are by his courtesy enabled to reproduce his measured study, showing one bay of the nave and south aisle, both inside as well as put, reduced from his half inch scale drawing. Shortly we hope to follow on with another similar detail of the same beautiful example of the Early English and Geometrical periods.

The borough surveyor of Warrington, Mr. V. M. Ker, has been instructed by the corporation to prepare a plan for raying out the land on the south-east side of Warrington

# PROFESSIONAL AND TRADE SOCIETIES.

Bristol. Society of Architects.—The third sessional meeting was held on Monday in last week, at Fortt's, 6, Royal Promenade, Clifton, at 5.30 p.m. The President, Mr. Graham C. Awdry, F.R.I.B.A., having taken the chair, a lecture (illustrated by lantern slides) on "Modern Cement Manufactories" was delivered by Mr. W. S. Skinner, F.R.I.B.A., who described the various types of machinery used in the manufacture of cement, and traced the materials through the various processes from their raw state to the finished product. On the conclusion of the lecture a short discussion ensued, in which various members took part. A vote of thanks to Mr. Skinner, proposed by Mr. G. C. Lawrence, A. R. I.B.A., and seconded by Mr. C. E. Thompson, Lick.I.B.A., was carried with acelamation.

LENDON AND MIDDLESEN ARCHEOLOGICAL SOCIETY.—The Lord Mayor presided at the Diamond Jubilee meeting of the London and Middlesex Archaeological Society, held in the afternoon. Mansion House, on Tuesday last week.—The president, Sir Edward W. Brabrook, F.S.A., in the course of an address on The Growth of Archaeology in London during the Past Sixty Years," remarked that the inaugural meeting of the Society was held on December 14, 1855, in Crosby Hall, and it was not the fault of the members that the ball had disappeared from the City of London. The very greatness and prosperity of London militated against the preservation of the relics of its history. Not was living of those who attended the augural meeting of the society: the oldest member was the vice-president, Mr. E. J. Barron, now in his ninetiath year, he joined he (the speaker) neco... 5. The society had been re-(the speaker) became a in 1859, while member in 1865. The society had been recognised by the Corporation and the City Companies, and it had been the means of archæological discoveries. many making notably that concerning the trade guilds of the glovers, the blacksmiths, the water-bearers, and the clothworkers, as revealed in the documents of the Commissary Court of the Bishops of London. It had also provided the memorial window, representing the minor companies of the City in the Guildhall Library. During the last sixty years there had been a marked change of public opinion in regard to the preservation of old churches and other historic buildings, but improvement was still needed. The method of is-suing faculties, he said, was a weak point in the present system, and he thought no faculty should be granted until the Chancellor of the diocese was satisfied by independent expert advice that it was not open to objection on archeological grounds. love of antiquity, he continued, was a mental and moral quality as well as an aesthetic one. and we might contrast with this the depth of infamy our enemies had incurred by the or miamy our enemies mad incurred by the destruction of the Library of Louvain, the Cloth Hall of Ypres, and the Cathedral of Rheims, all sacrificed to a brutal savagery which prided itself on rivalling that of the Huns.

Open-Air Schools Schools.—An "Open-Air Schools was delivere Saturday by Mrs. Leslie Mackenzie. delivered Edinburgh, at a meeting of the Glasgow Branch of the Educational Institute of Scotland. The meeting was held in Perry Street Special School, Glasgow, which is of the open-air type. Mr. James Knight accupied the chair. Mrs. Mackenzie said an open-air school did not mean a playground. It did not mean a shed and a playground. It was an ordinary school built on open-air principles, and these principles ought to apply to all schools. The people to be first educated were the managers and the architects. The pupils in open-air schools must have extra clothing, and both teachers and pupils in such schools re-In Edinquired and could take extra food. In Edin-burgh a beautiful school for 1,400 children had been built, and the whole of the three floors were open. Mr. D. M. Wilson, con-Committee on Special Schools vener of the under Glasgow School Board, who onened the discussion, referred to a visit which, as a member of a deputation, he made to open-air schools, and remarked that the deputation

were more struck by what mey at an Duncan Street School in Edinburgh than by anything they saw or England.

SCOTTISH SOCH IN AU ANTIOUMER. -10cfirst evening meeting of the Society of Anti quaries of Scotland for the session was held in the rooms of the Royal Society at 24. George Street, Edudurgh, on the 13th inst the Hon. John Abereromby, LLD., president, an the chair, Mr. Harry R. G. lughts, F.S.A. Scot., read a paper on "The Roads that Led to Edinburgh." The paper was illustrated by copies of manuscrip the Advocates Library and th the Advocates' Library and the British Museum, Mr. Inglis remarked that in cudeavouring to ascertain which are the earliest roads leading to Edmburgh our knowledge is very much circumscrabed by the absence of early road maps, the first of any real service being those of Adam, of 1680. The earliest known source of geographical information about Britain is a Ptolemy's Geography, but it is so confused as to be of little service as far as Scotland is concerned, while the Antonine Itinerary of 200 a.b., giving the Roman roads in Britain, mentions no roads in Scotland. In mediaval times the most interesting document dealing with the routes in Scotland is an English manuscript British Museum known as Hardyng's Chroncle, written about 1425 by a supposed spy, describing the towns and eastles, with the distances apart, and the order in which they should be taken, as well as the route the armies should follow in subjugating the country. The first survey of Scotland upon a large scale was by Timothy Pont. Aloso work of 1609 was added to by Gordon of Straloch, and the whole published in Blaeus Atlas of 1649. Among these maps the Lothians is the only sheet showing the roads, but whoever filled these into the map had no Adair fed sure knowledge of their course. lowed in 1680 with some beautifully drawn maps, which are preserved in the Advocates d these show the roads very These and Blacus maps were Library, and these show accurately. These and Blacus maps wer made use of and reproduced in small scale with some reads roughly drawn in, in Molls' Atlas of 1722. It was not till 1745 that a real survery of the country was begun, and this was completed and revised to 1755. These road maps now lie in manuscript in the British Museum, and have never published, though some maps reduced from them were issued from 1770 to 1820. A fine survey, mostly from estate plans, was issued about 1822 in Thomson's Atlas, but it was not till the publication of the ordnance survey. '356 and 1886 that we have a true between record of all the roads and paths in Scotland. Of the roads leading to Edinburgh, perhaps the most interesting is the road over the Cheviots from England. It is described in the Antonine Himerary as a Roman road as far back as the third century, v.b., but the Romans lay no claim to it as extending beyond the Northumbrian border, and it equally remarkable that the same thing applies to the Roman road on the west coast, which terminated a little beyond Carlisle. We are, therefore, faced with the question whether the Romans made any roads into Scotland, or whether they simply used the native highways as sufficiently direct for their purpose. In early times we do not know whether the roads in the South of Scotland all trend d towards Edinburgh or not, because this city seems only to have grown in im-portance as the seat of government moved outhwards, first from Perth to Dunfermline then from Dunfermline to Edinburgh. We may take it as likely that the oldest roads leading to Edinburgh would be those from Dunbac, Lander, Dumfries (vià Biggar), Lin lithgow, and Queensferry, all the others being only of local value. As to dates of construction, we have almost no records of any being actually made before 1600. Of the modern roads leading to Edinburgh. broadly speaking, the present roads were formed about 1830; if an older line is seen it would date from about 1780; and if a third and steeper line is observed, it is

the Noth Kitch at Mich yard, sa Scandinavian menunant, showing on each face the remains of a long shafted Celtic cross with a cabled border, the shaft ornamented with a carelessly drawn inartistically designed vertical step pattern. Below one limb of the cross is carved a Viking ship, which is the first example of this device found in the island, and which affords a link with the later monuments of the western isles Scotland. A runic inscript on runs up the shatt, which is interpreted. Hedin set this cross to the memory of his daughter (Hilli). Arni cut these runes. The shuis realistically treated; it is high at the provi and poop, the bulwarks low am dship; the sail is furled, and instead of the fixed rudder at the stern, there is a steering our on the starboard side. Mr. Kermode believed that the purpose of the ship was to indicate the descent of Hlif from Godoed Crovin, from whom both the kings of Man and the Lords of the Isies had derived the ship as an armorial bearing.

THE ART OF THE LEVELAN RENAISSANCE. The last of three between in this subject was given by Mrs. Webster, London, in St. Andrew's Hall, Drumsheugh Place, Edinburgh, on Tuesday in last week. Mr. R. Morley Fletcher, director of the Art College, and J. The additional defends in the The subject dealt with in this presided. The subject delecture was Venetian art. Venice, she said. was a name to conjure with. See Venice and die" was an old saying, which she took to mean see Venice before you die, which was good advice. In speaking of the distinction between Florentine and Venetian art she indicated that while the former school concerned itself with form and line, the latter had more to do with colour and character. The influences which brought about the Remaissance were late in involving owing to its insularity—the art of Venice was the last to come and the last to go of the Italian schools. The artists specially selected by Mrs. Webster for notice were the Bellini family, who had the foundation af the Vene-tian school: Titian, Carpaccio, Giorgione, and Tintoretto, and of their admired works several notable examples were shown on the lantern screen. Speaking of Titian, Mrs. Webster sand that in his time Venue was in the height of her power and the fulness of her beauty and intellection vitality. The great endowment of Titian was in painting; unlike Leonardo da Viaci, be was not e man of all round accomplishments, but in the history of art none bad used colour with such a majestic conception of its power parcio, who was one of the Belimi group. pacero, who was one or the bennin group, was an excellent artist, as his pactness of St. Frsula and St. George, still in Venice, showed. Tintoretto, another of the great Venetians, was a born painter, a great draughtsman who endersonied to combine the Plorentine line with the Turan colour. picture of his must rpiece. The Miracle of the Slave, now in the Academy at Venice, was shown and explained

The History of Art in Scotland Mr. J. Campbell Mitchell, A R.S A., of the Einburgh College of Art, addressed the members of the Eastern Brush of the Scotlish Art Teachers' Association, at Dundee, on Inosday in last week. M.ss Wingale, president of the branch, presided Mr. Campbell Mitchell, in tracing the early history of art in Scotland, said then was a popular belief that Scotland had always been at insertistic nation, an error based on ignorance of Scotlish history. Unfortunately, much of the art of earlier generations had been destroyed during the troublous times which all the flowed the death of Alexander III. and during the Retormation.

being only of local value. As to dates of construction, we have almost no records of any being actually made before 1600. Of the modern roads leading to Edinburgh, broadly speaking, the present roads were formed about 1830; if an older line is seen it would date from about 1780; and if a third and steeper line is observed, it is almost equally safe to say that it was laid down about 1755. A paper by Mr. P. M. C Kermode, F.S.A. Scot., recounted further discoveries of early cross-slabs in the 1sle of Man. The most interesting of these found

plaintiff was entitled to submit such amended particulars as were sent in in this action, and that the County Court judge was bound to hear evidence as to the alleged negligence in hear evidence as to the alleged negligence in supervision and give judgment upon the facts as to the alleged "tack of supervision" in which the architect acted not as an arbitrator, but merely as a supervisor. Dr. Herbert Smith, for the respondent, argued that if the learned County Court judge gave his decision on the actual facts there could be no grounds of appeal. Any grounds of appeal could only ine based on points of law, and Judge Woodfall's decision, given in his discretion under Rule 12, related to two questions of a legal nature. First, as to the alleged tort—as to which they would have proved, if evidence had been called, that no fraind was compared to the state of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country Any grounds of appeal could only mutted—the secret commission was alleged to have been received in 1912 by Mr. Biggs, who died on February 1, 1915, and the action was tried on Oct. 25, 1915, so that in neither respect was the six months' limitation, before the death of the person alleged to have received the secret commission or the bringing of the action, observed. Then the further particulars. action, observed. Then the turner parts and furnished a month after the original statement of claim was submitted, disclosed an entirely fresh cause of action, namely, negligence in supervision and not negligence in mproperly granting a certificate. He cited "Chambers v. Goldthorpo," supra, which disposed, as the learned County Court judge had held, of any claims pleaded in the original par-ticulars against Mr. Biggs. Dr. Herbert Smith further contended that the particulars of the case should have been dealt with as a set-off to Mr. Biggs's action during his lifetime and not as the appellant had done, when the appellant had lost the case brought by Mr. Biggs against him and present action was started against the executrix. In "Rogers v. James" it was held that an architect was liable for negligence in supervision, even although he had given a final certificate. In giving judgment, Mr. Justice Coleradge said he would dispose first of the Coleredge said ne woo...
point about which he thought there could be no dispute—a small claim for three and a half guineas for extra copies of specification, regarded by appellant as a fraudulent or illegal commission. This was not a tort, the proceeds or nature of which had been appropriated by the eleceased Mr. Boggs and added to his estate, and, therefore, it did not seem to him to be money or property within the purview of the Act 3 and 4 William IV., whichever we in the hands of the plaintiff. Therefore, it seemed to him not to be within the pro-visions of the Act nor to be in the nature of a tort to which the general maxim personalis moritur cum persona applied. A more difficult problem was raised by the question as to the amended statement of claim, the second portion of the appeal. It was admitted by counsel on of the appeal. It was admitted by counsel on both sides that the original particulars showing a claim for negligence in improperly granting a a claim for negligence in improperly graining a certificate to the holder did not disclose a cause of action, and would not be upheld in view of the decision in "Chambers v. Goldthorpe," for the architect, in granting such a certificate, was acting as a quasi arbitrator. But further particulars were called for and were submitted. and it was open to consideration whether these did not give a good cause for action. His lord ship was not persuaded that the learned County Court judge had his attention clearly drawn to this point, that the second set of particulars, in so far as they were merely a reiteration of the first particulars, added nothing, and that his attention was not drawn to the question his attention was not drawn to the question as to whether or not it disclosed a good cause of action. So far as he could see, the County Court judge did not apear to have quite appre-ciated that point. Under those circumstances he considered the best course to pursue would w that the action should be sent down to the be that the action should be sent down to the County Court judge for him to consider that point—if the second particulars did not show a cause of action. If they did not, there was nothing for the judge to decide. If, however, they did disclose a fresh cause of action he (the learned judge) ought to consider, whether or not it was not competent to him to try that cause of action and determine it. It would, he to use of action and determine it. It would, he thought, be better that the judge should consider that point carefully and come to a judicial conclusion about it. Mr. Justice Low con-curred, observing that it seemed to him that the question of whether or not these very confusing particulars disclosed a fresh cause of action was essentially one for the learned County Court judge to decide. His lordship would not express any opinion on this point beganse that was really for the County Court codes to decide. In answer to Dr. Herbert Smith, Mr. Justice Coloridge stated that there would be no order as to costs in this anneal.

Heavy Penalties for Restming Work.

At Newcastle on-Tyne County Court of

Thursday, John Riddell, plumber, of 285, Shields Road, Newcastle, made an unusual claim against the United Operative Plumbers' and Domestic Engineers' Association of Great Britain and Ireland, of 82, Osborne Road, Newcastle. The plaintiff was a member of this trade union. About four years ago, owing to incapacitation through physical injury, he became untilled to and was granted owing to incapacitation through physical injury, he became entitled to and was granted superannuation benefit. In March, 1915, he applied for leave to resume work, and the request was granted, but the association demanded that he should repay the superannuation money he had received, amounting to about £64. Plaintiff resumed work at his to about £64. Plaintiff resumed work at his trade, and offered to resume his contributions as a full member of the association. This was declined, and it was decided that the plaintiff, having started work, had severed his membership entirely. In consequence, his fellow-workmen refused to work alongside him. Threatened with the loss of his employment, he was compelled to rejoin the association as a trade member of the of his employment, he was compelled to rejoin the association as a trade member of the third degree, to whom benefit was restricted to strike pay. The plaintiff claimed a declaration from the Court that so long as he conformed to the rules of the association he was entitled to participate in the rights, privileges and benefits of a full member, that his exclusion from the association was invalid, and that the association should be restrained by injunction from excluding the laintiff. His Honour Judge Greenwell said the society had made a fair offer for bringing Riddell back into the society when they sug-Riddell back into the society when they suggested the repayment of the £64. If the plaintiff wished to argue further with regard to the Court imposing rules upon the society, then he was entitled to invite the Divisional Court or the High Court to do it. Judgment was given for the defendant association with costs.

### OBITUARY.

Mr. Baldwin Brown, A.R.I.B.A., who had been for several years on the staff of the city architect for Bradford, Mr. W. Williamson, has died, after a surgical operation, in his fortieth year. He served his articles with Mr. Rhodes Calvert, of Bradford, and was afterwards in the offices of Mr. James Ledingham and of Mr. Edgar A. Parkinson. He was keenly interested in the housing problem and in town-planning, and had prepared several schemes for the replanning of the central area in Bradford preparatory to the competition recently instituted. A resolution of the City Architect's Committee has been passed, expressing sympathy with his sorrowing parents and their family, and high apprecia his sorrowing tion of his "devoted services," He became a student of the Royal Institute of British Architects in 1903, and was elected an Associate five years later.

We regret to announce the death of Mr. Samuel Elliott, of Caversham, the founder of the firm of Samuel Elliott and Sons (Reading). Ltd., which took place on December 13 last. The deceased was sevency some years of age, and was one of the early pioneers was and moulding trade, of the high-class joinery and moulding trade. with which his name was intimately connected for many years, both at Newbury and at Reading, and gained many gold medals and awards at home and on the Continent. Mr. Elliott was born at Newbury, Berks, in 1838. and commenced business in his native town and commerced dusiness in in 1859, succeeding to the building business of his grandfather. Mr. Elliott was a builder and contractor of considerable ability and emmence, and carried out several church contracts under the late Sir G. Gilbert Scott. the late Mr. G. E. Street, and for the late Mr. John F. Bentley at Westminster Cathe-dial. He also carried out considerable building work under the late Mr. Alfred Water-house, R.A., and the late Mr. Norman Shaw, R.A., notably under the latter architect. Shaw, R.A., notably under the latter architect, "Greenham Lodge," Newbury, and "Greenlands." Henley-on-Thames. While Mr. Samuel Elliott was a contractor at Newbury, he erected in Reading the Old County Court Offices, since pulled down, and the Congregational Church, Friar Street. Reading, which has been consulted by the Deadling Theorem. now occupied by the Reading Theatre, besides several houses in the Katesgrove district. He undertook the re-erection of Temple Bar in Theobalds Park, Herts, but of recent years he turned his attention to high-class joinery and mouldings, first at Newbury, and latterly at Caversham, Reading. The business at Caversham is being carried on at the The husiness present time under the name of Samuel Elliott and Sons (Reading), Limited. Mr. S. Elliott was a Freemason, belonging to the Deptford Lodge. The deceased had been suffering lately from almost total blandness, but his mental faculties were unimpaired to the last. He leaves a widow, two daughters, and three sons, two of whom are directors of the com nany. The interment was at Caversham, on Thursday, December 16. Mr. Elliott was of nanv. i most genial disposition and great energy, and invented many useful and valuable natents.

The death took place at Portland Villas Plymouth, on Sunday in last week, in his eighty-third year, of Mr. Robert Thomas Relf, a well-known contractor for considerable milway and Government works in Devon and ornwall. With his son, Mr. George Robert Relf, deceased carried out several contracts for the Great Western Railway in Cornwall, nelnding the doubling and diversion works on most of the line between Saltash and Penzance, including many new masonry via-Penzance, including many new masonry via-berts to take the place of the old wooden structures designed by Brunel before 1859, when the Royal Albert Bridge across the River Tamar was opened, the principal being those between Saltash and St. Germans, and those between Saltash and St. Germans, and it Danbuz's Moers and Carvedras, at Truro. Messrs. Relf also carried out the improvement of the Treamble I ranch of the Cornwall Minerals Railway, the Newquay station improvement, the Retew branch from Retew Mellangoose, Bodmin Station yard, and the Bohmin and Boscarne Junction Railway for the London and South-Western Co. In his last years Mr. Relf was also associated with his son in a railway no the associated with his son in a railway no the Trenance Vailey, St. Austell, now being built.

# Correspondence.

ARCHITECTURAL ASSOCIATION CHE VOLUNTARY AID DETACHMENT

To the Editor of THE BUILDING NEWS

SIR. The necessity and importance of Rod Cross work hardly need emphasis at the pre-The interest to be found in it can sent time. be attested by anyone who has undertaken it. What does require emphasis is the need of a constant supply of workers, and I venture to draw the attention of your readers to the draw the attention of your readers to the detachment now registered by the War Office as "London 43, V.A.D., Westminster Division," with headquarters at the Architectural Association, 18, Tufton Street, Westminster, S.W.

There is plenty of work to be done, and

any man who joins may be sure that his services will be used as soon as he is qualified. Classes for instruction are held as recruits counce in. The first course of first-aid lectures was given by Dr Spicer in Septem-her. Dr. Brydone, the medical officer of the detachment, continued with a course on home nursing, and has given a course on first aid for the examination at the end of this month He is now holding a third course, and another is to begin soon after Christmas. There are between sixty and seventy names on the roll, of whom between thirty and forty are already

qualified.

As this is the only men's detachment in the Westminster D. vision, they have been called amon to assist in many ways. Thus, we proupon to assist in many ways. Thus, we provide orderlies for the Officers Hospital at 24, Park Street, and for Lady Violet Brassey's Park Steet, and for Lady Violet Brassey's Officers' Hospital, and propose to do the same for the large soldiers' hospital soon to be established at 184, Queen's Gate. We have volunteered professional services in advising the Westminster Division on the various houses which may be turned into hospital than the propose to assist the pitals. Our stretcher-bearers hope to assist the London Ambulance Column in meeting the trains of wounded at the railway stations and conveying them to hospitals, and we are almost hoping for another successful air-raid, because the police have asked us to be ready to render first aid and do what we can to succour the victims. Our commandant, Mr. Ambrose W. Coffin, is constantly asked for volunteers to undertake all kinds of jobs, from conveying stray convalescents across London to lending a hand to meet a rush of clerical work at headquarters. Parades for company and stretcher drill are held under the instruction of Sergeant Daniels, of the R.A.M.C., who in quieter times is an engineer in Canada.

We make a special appeal to architects and men of kindred occupations, because through them the detachment came into being, and most of our members are drawn from these callings. But we welcome all men of goodcannigs, but we wercome an men of good-will from any station in life. The only conditions are that they should be either not eligible for military service or already attested under Lord Derby's scheme, and the only financial contributions required are a nominal entrance fee and the provision of their own uniforms. The work will increase as the war goes on and the more workers we can have to draw upon the better. It is certain that no man who undertakes the work will regret it, and the knowledge he will gain is such as every man ought to possess and as will make him more useful in every branch of life.

For further information and application forms, inquiry should be made to the Quar termaster, Mr. V. Wilkins, at 18, Tufton Street, or the Commandant can be seen there Yours faithfully. on Wednesdays at 6 p.m.—Yours fa

Hon. Sec. Architectural Association. 18 Tufton Street, S.W

the apposite might be the case. All agreed with the statement that in many branches a industrial active had been fairly beaten by Germany and Austria, because the reation of art to commer that he more shownly stalled all better macristood in those countries.

A correspondent of the Times describe the recent discover es made as the result of exeavations in St. Augustine's Abbey Chinea. Canterbury. Some months ago the layer of earth which marked the level of the monks' choor at the Suppression was removed, and further exeavations revealed the circular femalations of Abbot Wulfrie's work. This consists of a building circular within and octagonal without, for which there is no paradlel in England before the Crusades, when there were the carcular Templars' churches modelled on the church of the Holy Sepulchre Within is a circle, surrounded by eight solid masonly foundations, on which stood either pillars or solid piers, and an octagonal exterior, which opened on the east into the original Abbey church, which was built as few years earlier by Ethelbert and St. Augustine. The portions of St. Gregory has been discovered, with the tombs of Laurence, Mellitas, and Justus, the second, third, and fourth Archbishops, in a row from east to west, against the north wall, just as they were described by Grocelin, a monk of Flanders, over eight lumdted years ago. North of the wall is the hole in which the mathle sarcophagus of Abbot Adram rested during the rebuilding by Abbot Scotland in 1070. The tombs were empty, as the holes had been translated, but they were just as they were left in 1091.

The annual report of the Department of Technology at the City and Guilds of London Institute gives a review of the work carried on during the session 1914-15 under the on during the session 1914-15 under the exceptional conditions due to the war. As was to be expected, the numbers of students attending classes for technical training and those presenting themselves for examination at the end of their courses of instruction have been materially reduced. Although the total number of classes registered in tech nological subjects remains practically the same, the number of students in attendance thereat has fallen from 55,996 to 47,050 this theteat has failed from 55,996 to 44,050 this year a reduction of hearly 16 per cent, on last year's figures. Correspondingly the number of candidates who have presented themselves for examination in technology from centres in the United Kingdom has falled from 25,119 to 15,623, a dicrease of there from 25.119 to 15.625, a decrease of nearly 52½ per cent. During the session, 183 names have been added to the institute's 1.235 or teachers in technological subjects. 155 persons have been approved as assistant institutors in technology or as teachers of classes in domestic subjects, and 288 appliance by the domestic subjects, and 288 appliance. ants have been provisionally recognised. can't have been provisionally recognised. The institute's cannitations for tendinates for the institute's cannitations for tendings certificates in wood work and metal work suffered severely on a cast of the war. The advisory committee clock was formed in the autumn of 1914 to asset the work of the institute by its advice on be subjects connected with the building trades has held several meetings at which the symmetries of termination in garaginary and trades has held several meetings at which the systems of examination in carpentry and pamery and in britawork have been under early and cration. At the suggestion of the institute's advisor, commutate on plumb 12 to a number of typical specimens of the resistance of typical specimens of the resistance of the specimens of the resistance and students, several London and province all firms co-operating in the status of the resistance while unit, South Kensing at the status exclusion to the unlike

of pipes for bending and jointing being reduced to 2 ins. in drameter.

Lord Joicey formally opened on Thursday an exhibition of pictures and curies relating to Oid Newcastle in the Laing Art Gallery, frigam. Place. Newcastle-on-Tyne. The paintings in oil and water colours are exhibited in galleros A and B, while the engravorded in galleries A and B, while the engrav-ings and portraits, maps, plans, objects of artistic it test from the olden days, examples it astrating Newcastle's past indus-tries, a model of the old Tyne Bridge, a model of Chollerford Bridge, and the large model of Newcastle in the sixteenth century presented by Lord Joicey and Mr. John G. Joicey, are shown on the ground floor of the autlang. The last mentioned model of the period of Queen Elizabeth gives a vivid idea of what Newcastle was like at that time. It is a permanent gift to the gallery. There are 126 water-colour pictures and 45 oil paintings and portraits, each of special local interest. In the museum section there is a fine collection of Newcastle silver plate dating from the year 1664 to 1791, lent by Mr. Thomas Taylor, and there are attractive specimens of old Newcastle pottery and many specimens of old Newcastle pottery and many other curios. A notable water-colour picture depicts the old Tyne Bridge during the great trost of 1784. The Castle appears in its original state, and the venerable Chapel of St. Thomas, with the Exchange, and the famous crow's nest on the pinnacle of its spire, is shown. H. B. Richardson's fine work descriptive of the great fire at Gateshead on October 6, 1854, is lent. Mr. F. G. Evans has presented a picture of the demolition of the New Gate, 1825, and there is a capital view of St. Nicholas's Church from the Groat Market by T. M. Richardson. Many of the old buildings in the Groat Market were removed when the Town Hall was built. "The old buildings in the Great Market were removed when the Town Hall was built. "The Middle Street, 1847," "Grainger Street, 1833," "Castle Garth, 1844," and "Old Houses which stood on the site of the present Town Hall" are all views to catch the eye. There is a water colour of the "Interior of the Chapel of St. Mary the Virgin, Westgat: Read, 1844, by John Sterey, whose sketch was made on the snot during the sketch was made on the spot during the demolition of the building in March of the year named. Another picture to attract attention is T. M. Richardson's The Postern Gate, which adjoined the Deuton or Neville Toxer, and stood at the tack of the premises of the Literary and Philosophical Society, It was from this gate that a sally was made in the reign of Edward III, against the army of King Divid of Scotland, which was encamped on the Forth. There are many other local views by Richardson, sen, and through his work we get a comprehensive pictorial history of the town as he knew it. Other artists represented in the water-colour section are R. J. S. Bertram, J. Skelton, T. H. Hair, F. R. J. S. Bertram, J. Skelton, T. H. Hair, F. Muckenzie, J. L. Bond, Birket Foster, J. Wool, S. Brownloov, Thomas Wakeman, J. Eyre, Joseph Crawhall, W. Mackay, W. J. Hepper, J. A. Stephenson, J. J. Potts, and J. Embleton. Among the oil paintings are the late R dph Hedbey's "Scottish Prisoners on the Tower of St. Nicholas's Cathedral, 1644," Wilson Hepple's "Barge Day on the Tyne," W. Bell Scott's "The Building of the Castle," James Ramsay's "The Lost Child," icst exhibited in 1825; H. P. Parker's "New-Castle. James Ramsays "The Lost Child," instructional in 1925; H. P. Parker's "Newcastle Naturalists and Other Worthies," and Wilson Hetple's "John Wesley preaching in the Sindhill.

the solution. At the suggestion of itels advisor, committee on plumb in anher or typical specimens of work over prepared for the guid specimens of work over prepared for the guid carbon. A scheme for preventing disputes in the huilding trade has been decided upon at a meeting of the National Conciliation Board for Building Trades held in London. meeting was attended by representatives of builders and workmen of all trades master from every part of the country. The scheme provides for the establishment of machinery for dealing with demarcation questions which may arise from time to time, and which in the past have led to some bitter and prolonged disputes in the building trades. Local districts and national Boards of joint represen-tatives will be created to decide the demarcation problem. Of twenty-two minous affected by the proposal, eighteen have assented.

The great delay in the return of emptiis causing considerable expense inconvenience to the paint, colour, and varmshi manufacturers and their buyers. The National Federation of Associated Paint, Colour, and Varnish Manufacturers of the United Kingdom have been in communication with the Railway Executive Committee, and has sug gested that the railway companies should con sent to receive empties at all their stations sent to receive empties at all their stations in the ordinary way, say, once a week or at least four times a month, and undertake to return them to the paint producing centres as soon as possible thereafter, or not later than, say, three days after the time they receive them. On August 28, 1915, the Railway Executive Committee replied that every effort was being made by the Railway Com panies under the prevailing conditions to facilitate the working of the traffic. Little or no improvement having taken place, the Federation have again drawn the attention of the Railway Executive Committee to this im portant question, emphasising the tau that in some districts, particularly London and the South of England, it is nearly an impossibility to get back these returned empties, also pointing out that some of the statics musters were declining to accept these empties, even on the terms mentioned above. The Railway Executive Committee has been asked to cause instructions to be issued by the Railway Companies to their station masters to receive empties when presented and to despatch them with the least possible delay to the paint producing centres. It is obviously in the interests of buyers that they should competate in the movement for these returned empties and we would appeal to them to make every endeavour to assist the railway companie in dealing with this traffic, by making delivery of their empties at the stations and not wait for them to be collected. We also urge that cases of refusal by station masters to accept these empties should at once be brought the attention of either the Secretary of the National Paint Federation. Exchange Build-ings, Bowlaliey Lane, Hull: or the Railway Executive Committee. 55. Parliament Street. Westminster, London, S.W.

The Val de Travers Asphalte Paving Company issues from Hamilton House. Bishops-gate, E.C., one of the nestest and most artistic desk or wall date plaques for 1916 that has reached us. It is a Ironzed tablet about 8 by 6 ins., bearing a well-designed and executed representation of the company's men laying down asphalte in the pany's men laying down asphalte in the street. In the lower right hand corner an unobtrusive but convenient niche takes the date-cards, which are easily shifted, and which readily catch the eye without spoiling the effect of the plaque, which most of us will keep for many years.

-Mr. Edward Palk Boxev, of Brigifield, Torquay, builder and contractor who died May 10, has left \$22,159.

A curved oak clergy stall has been placed in the Ilkley Parish Church. It is made out of an oak tree that grew in the playground of the Ilkley Church schools

H.M. Chargé d'Affairs at Santa Draningo reports, under date November 5, that the construction of a concate puer, 1,130 ft in length, and Customs buildings, is projected at Puerto Plata. Tembers will be called for after the scheme has been approved by Congress.

VENICE FROM THE STEPS OF ST. GIORGIO MAGGIORE AND THE CHURCH OF ST. FOSCA, ADJOIN-ING THE CATHEDRAL AT TOR-CELLO, NEAR VENICE.

[WITH ILLUSTRATIONS,]

Venice, no longer the mistress of the Adriatic, is once more in jeopardy, and has ranged herself as a great naval base in the front rank of this vast European war. Whether her magnificent architecture will be spared or not time alone can determine. Already the Zeppelins of the enemy have eight or nine times bombarded the town, and amongst other damage the Austrians have rumed the beautiful ceiling by Tiepolo in the church of the Scalzi, or barefooted friars (1649-1689). This building is famous for its gorgeous display of marble work and inland decerations, but the gem of the church is the Madonna by Giovanni Bellini behind the High Altar. The municipality has been busy safeguarding the Venetian palaces, churches, and galleries of paintings. Sand-bags are piled up 30 ft. high to protect the Sansovino bronzes; the mosaics of St. Mark's are covered in, and big piers of solid brickwork in cement 3 ft. thick have been exected to shore up the marble arches of the grand portals of the great Basilica in case the fabric should be hit, and so risk a collapse. Everywhere inside the cathedral sand-bags are employed to screen the structure and its decorations, as well as save the fittings. On one pillar alone the bags form an embrasure 20 ft, in diameter to shield it from harm. The Pala d'Oro has been removed. and the façade of the Doges' Palace looks more like a fortress, being faced up with solid walling having towers built at the corners of the façade 20 ft. tall and constructed all in brickwork 3 ft, thick. The loggia is strutted up with centring supported by shores of massive timbering. The Scala dei Giganti and Cellconi on his charger, now covered by a roof, are well entrenched and substantially shrouded in sand-bags, which are likewise employed to cover the well-known pair of well-heads in the famous courtyard. The Piazza San Marco is grim and grey and black looking, while the Loggetta of the Campanile has been compared to a well-devised "dng-The palaces along the Grand Canal are vacant, the Signori having sought safer quarters.

Our illustrations to-day from Venice and its suburbs as seen in times of peace

have consequently special interest.

The cathedral at Torcello, with its massive campanile, is a five-aisled church with double aisles on either side of the nave. It was built a.D. 641, restored a.D. 864 and again about A.D. 1008, when it was practically rebuilt in the form of the earlier building. There are several curious mosaics of that date still in existence,

and these were probably by the same artist | tier of the stern ledges that sweep round as of those at Murano. Each of the aisles and the nave terminate with apses. The columns dividing the body of the church from its aisles are of veined marble with Composite caps designed partly on Corinthian lines mixed with Byzantine details. The crypt is probably a remnant of the seventh century church. A marble screen fences off the choir from the nave, and it is adorned with sulptures of lions and peacocks thought to have been brought from Aquileja. The scheme is spoken of as "the prototype of that at St. Mark's, Venice." George Edmund Street's description of it is worth quoting: - North-west of the rood screen stands the marble ambon a pulpit in two divisions, one (circular) facing south, and the other (square) facing west. This and the staircase leading to it are full of delicate and good carved work. The arrangement has an absurd likeness to many a modern English pulpit and reading pew, and there is certainly force in the observation that such an arrangement would never have been thought of unless the Gospel was to be understood by the people. Now that they do not understand it, it is no longer said from the ambon, and ambons seem to be much less useful to the Romans than road screens are to us.

This cathedral was greatly injured and its exterior completely modernised during injudicions and hasty repairs under the regime of the Austrian authorities, when the new roof was put on. The setting out of the sanctuary and high altar in the chancel is most remarkable, the seats for the choir and clergy rising in six tiers within the semi-circular form of an auditorium or theatre, and the episcopal throne stands in the centre, raised above these seats, and is approached by its own steep staircase of eleven treads. Ruskin, in his "Stones of Venice," remarks upon this apsidal contrivance thus: "There is one circumstance which we englit to remember as giving peculiar significance to the position which the episcopal throne occupies in this island church, namely, that in the minds of all Early Christians the Church itself was most frequently symbolised under the image of a ship, of which the bishop was the pilot. Consider the force which this symbol would assume in the imagination of men to whom the spiritual Church had become an ark of refuge in the midst of a destruction hardly less terrible than that from which the eight souls were saved of old, a destruction in which the wrath of man had become as broad as the earth and as merciless as the sea, and who saw the actual and literal edifice of the Church raised up, itself like an ark in the midst of the waters." The surf of the Adriatic recalled to them the storm-tossed craft on the lake of Tiberius. Let the

the altar of Torcello, and then looking. as the pilot did of old, along the marble ribs of the goodly tempieship, let him repeople its ruined deck with the shad ws of its dead mariners, and strive to feel in himself the strength of heart that was kindled within them when first, after the pillars of it had settled in the sand, and the roof of it had been closed agains; the angry sky that was still reddened by the fires of their homesteads just within the shelter of its knitted walls, amidst the marmur of the waste of waves and the leating of the wings of the sea birds r and the rock that was strange to them rose that ancient hymn, in the power of their gathered voices: 'The sea is His, and He made it; and His hands prepared the dry land.

A picturesque cloister connects the baptistery or church of St. Fosca with the cathedral. It is square on plan, with small projections on either side and a deeper one at the east, where the high alter is raised above the relics of the virgin martyr Fosca. who suffered under Decius. The square centre dome rises above simple pendentives. and the caps correspond with those in the cathedral colonnade, and at the east end outside there is some good areading. The mixture of red and buff brickwork is very The big and impressive red brick campanile, standing south-east of the choir of the cathedral, is very simple, with its areaded ton stage, from whence a singular view of vast interest can be obtained. making the trying ascent well worth the while. This tower was erected in the eleventh century, and is of the usual Lourbardic type. It stands seven miles away from Venice on the north, midst a waste of wild sea moor, so of an looking deathlike in lenden ashen grev as far as the eve can reach. The weird solemnity of this disengaged and water-bound campanile at Torcello, standing forth in its plain Lombardie simplicity, is not so evident when the point of view is screened by the cathedral or, as it appears, partly hidden by the adjacent smaller church or haptistery to which we have already referred in our present notes. Mr. Fred. Richards, of Chelsea, has lent us the accompanying pencil drawing, in which the cathedral tower necessarily takes a subordinate place in the The subject was drawn for grouping. Messrs. Adam and Charles Black's handbook on "Venice," which is one of the charming little volumes lately issued in which is one of the their "Sketch Book Series," and to which publications we called attention in our pages for October 20 and 27 last. the public shall have the right of free access to the room on the first Monday in every month from 10 a.m. till moon. Nineteen plates are devoted to illustrations of this house, embracing some sections, plans, and details supplied by Mr. W. E. Riley, F.R.L.B.A., R.B.A., M.L.C.E., the superintending archite to the Conneil (Plates 6, 7, 11, 12, 13, and 14).

H. 12, 15, and 14.

Palingswick Manor House, Ravenscourt Park, which is leased to the borough council as a free library, is an Early Georgian building, and a good type of its period. Eleven plates illustrate the building, which retains various evidences of an older structure. The grounds of the house, now a public park, centach a lake and an avenue of elm trees, now fast decaying. Close by the house is a lotty wrought iron early eighteenth century from gate, illustrated in Plate 104

No description is given of the present church of St. Paul, which was erected

No description is given of the present church of St. Paul, which was erected 1552-91, but an illustration of the old building which preceded it will be found in Plate 25, and there are illustrations of the pulpit, which came from the demolished church of Allhallows, Thames Street, and of some of

The houses on the Upper and Lower Mail and their adjuncts naturally supply the most interesting of the other illustrations. Among the best are Kent House, the Vicarage, Sussey House, and Kelmscott House, for some years the well-remembered London home of William Morris, himself one of the original members of the London Survey Committee, and always zealous for the preservation of an ancient and historic buildings. Six plates are devoted to Morris's house, which seems to be still kept intact, as we trust it may be for generations.

Altogether, 121 plates and many illustrations in the text adequately complete this well conceived and produced volume.

### SOME ROCHDALE MUNICIPAL WORKS

- Mr. S. S. Piatt, the borough engineer and surveyor of Rochdale, has delivered a lecture on "Some Engineering Features of Municipal Work" at a meeting of the Rochdale Association of Engineers, held in the Technical School. Mr. S. B. Barnes presided. Mr. Platt's lecture was an interesting account, protusely illustrated by lantern slides, of some of the unmicipal works of Rochdale. He described the construction of the terroconcrete bridges at Mellor Street, the Butts River covering and Figures Bridge: difficults encountered in the construction of sewers; and concluded with an account of the Bochdale sewage disposal works.

in die sewage disposal works. Speaking of terro-congrete, Mr. Platt seid that concrete, a material comparatively weak when exposed to tensile strains, produced when combined with steel, a constructional erice, to deby material of great value, economic adaptability with the land usefulness. The steel being rigidly Hammon with embedded in the concrete, the concrete stiff ened the steel and the steel reinforced the ened the steel and the steel reinforced the coast countrie. An important consideration was also that once properly made, the first cost was seed the only cost—a great advantage over steel that is constructions, which, if exposed to atmostrate said the only construction. When Platt said he was seed to the first in England to adopt this collision of construction. He had a good number of the open nexts in declarate had a good number that despendents in the land many difficulties. to and had to be faced and overcome To the chief works in Rochdale in which truction were used were carried out the Henrebique system of ferro-concrete. relating experiments as to the most form of concrete for the work. Mr. pole of the difficulties which had to There of the difficulties which had to exceed one in haidging the Spodden in Street—the fact that the land was eyembed by old colliery workings. This has the result of ferroconcrete piles or sent as here a larger. After construction the last to tested with great weights, and the cut in deflection revealed was only the replication of the river covering the result of the case of the river covering the result of the tested of the river covering the centre of the town, terro-concrete elities and mainterance, and was adopted in

preference to ordinary steel construction. A saving was particularly effected by the avoidance of regular painting of the underside of the surface.

Incidentally Mr. Platt mentioned the old footbridge which crossed the river between the Walk and King Street. It used to be called "The Iron Bridge," and he always thought it was iron. When he had occasion to look at it he found it was of wood with iron railings on the top. The wood was rotten, and so was replaced by steel beams. This, of course, was done at a time when there was no thought of covering over the tiver. Mr. Platt went on to speak of the tiver. Mr. Platt went on to speak of the gridge bear width of only 13 ft, between the parapets. The new bridge measured three times the width, being 42 feet between the parapets. It was a most interesting piece of work, because the canal traffic had to be kept going as much as possible. The actual demolition of the bridge was done in Whit week, when traffic was stopped.

difficulties encountered in making sewers, notably at Moss Brook and Hartley Bridge (where compressed air plant had to be used). Other points dealt with were the taking of sewers up rivers (as up the Spodden at Spotland), taking them under canals (as at Hartley Bridge and Sudden), over rivers (as at Half Acre, in which case the pipes are provided with special expansion joints to allow for the effect of the atmosphere on the iron and under rivers (as at Hamar Lane). Mr. Platt described the sewerage works in detail, and commented on the difficulty of dealing with some of Rochdale's sewage, which was of a rather bad type, owing to its foul and greasy character—the product of fellmongering, rubber recovery, and other works. The sewage disposal works had cost £130,000, and the extensions which were held up by the Local Government Board would cost another £25,000. The Half Acre works trested the sewage from a population of 85.000 (the rest is treated at Castleton). The process was not an easy nor an economical

one, but it had to be done,
Mr. W. Stott moved, Mr. J. L. Maxim
seconded, and Mr. J. Butterworth and Mr.
W. E. Crabtree supported, a hearty vote of
thanks to Mr. Platt for his lecture.

\_\_\_

A new theatre and cafes, shops and snites of offices have been erected on the Havelock House site. Sunderland, for the Provincial Cinematograph Theatres, Limited. The architects were Messrs, Percy L. Brown and Glover, Newcastle, and the contractors Messrs. Vi Loughlin and Harvey, of Belfast.

The Islington Borough Council have decided to release Messrs, Win. Griffiths and Co., Ltd., from their contract for the paving of Camden Road and Parkhurst Road owing to the difficulties in a uncetion with exercising the sanction to the loan in respect of these works, consequent upon the decision of the Treasury.

The restoration of the ancient church at Sysonby, a hander of Melton Mowbray, has just been carried out, thanks to the generosity of Ald. R. Deglersh, of Asfordby Place. For some years the side walls were moving outwards, and the roof was assisting to increase the movement. Now the weight of the roof will rest upon the tie beams, and new buttresses have been built to hold the walls in position. The roof has been renewed and strengthened, and a new side chapel, with vault, has been creeted. During the building operations a twelftheentary beam was found, and a fragment of Norman work discovered.

What is thought to be the largest free area of a nerste slabs without interior supports has recently been built in San Antonio, Texas, in an addition to the Beyar County Court House. The slab measures 112 ft 6 in, by 37 ft, 6 in, in extreme dimensions, and is supported only along the edges. A ribbed system has been added, with plastered ceiling below, the ribs running across the building and carried to the wall columns by beams masked within the wall columns by beams masked within the walls of the building. The floor was designed for a maximum load of 175 lb, per square ft, including 75 lb, live load, and consists of reinforced concrete ribs with top slab, forming a series of small T-beams. The cost, including concrete, reinforcing steel, Floortyles, Hy-rib, and forms, was 45 cents per square ft, of slab area.

### BENEFITS DERIVED BY AN URBAN DISTRICT ADOPTING A TOWN PLAN NING SCHEME.\*

By Louis Carr,

Sarveyor of Ruishp-Northwood Urhan District Council.

The town-planning scheme promoted by the Ruislip-Northwood Urban District Council re ceived the approval of Parliament on September 7, 1914, and as the period of twelve months, during which all claims for compensation and betterment have to be lodged, has now elapsed, the author is able to state gener ally the benefits which have been secured to the public and the landowners, and to give some information as to the claims for compensation and betterment, which latter jects have seriously engaged the attention of councillors and officials throughout the country.

The modifications of the " General Provisions" are not dealt with in this paper, but it will be of interest to describe the altern tions in the draft scheme as shown on the 25-in, Ordnance map, which may be summed

up as follows:

### STREETS AND FOUR WAYS

The north end of a 60-ft, street, practically running north and south through the centr of the district, has been amended to obtain a better outlet across some golf links. In the original scheme a road was proposed across original scheme a road was proposed across these goli links, but, owing to heavy opposition, the council decided to drop it; the Local Government Board have, however, reverted to the original scheme. Another alteration was with regard to a new road branching from an existing road was shown to run over existing build which This was amended so as to avoid pulling down the buildings. A further alteration wa a very interesting one. An alternative line of route was shown for a new 60-ft, road, but Local Government Board decided that alternatives could not be shown, and a definite line had to be fixed. In another case two streets were indicated on the map by dotted lines, together with a single alternative roul The Board decided that the single alternative road must be omitted. In the case of a new road, which was shown as 40 ft., but hal to be increased to 50 ft., the centre line had to remain as shown on the map. A number of new footways were amended as regard their width and position, and two footways which had been shown to be diverted with omitted.

### APPROPRIATION OF LANDS

One cemetery, allotments, land for store yards, and a refuse destructor, together with certain open spaces, were acquired under the Public Health Acts during the progress of the scheme, and could not therefore be included in the approved scheme. With regard to the suggested second cemetery in the south of the district, the board considered that the time was not tipe for another cemetery to be provided in this quarter, but my own opinion is that a mistake was made in not allowing us to acquire this land, as later on, in all probability, we shall have much difficulty in securing such a suitable site as the one scheduled.

The owner of the land originally selected for the purpose of a new sewage works objected strongly to the position, but willingly gave us the option of another site about threequarters of a mile away. Unquestionably this quarters of a mile away. Conquestionally this will be a great advantage to the district, and it will enable a greater area of land to be satisfactorily developed without any nuis ance being caused when the new sewage works

are made

Differential treatment was proposed for rail way land, but after negotiations with the to come to agree companies we were able ment with regard to all their various parcels of land in the district, which are now to be treated in the same way as the property of any other landowner.

### BUILDING LINES.

The building lines shown on existing streets have been approved, except in one case, where it was reduced from 25 ft, to 15 ft. The reason for this alteration was

A paper read at the recent Annual General Meeting of the Institution of Municipal Engineers.

that the ground receded very quickly from ay, and serious difficulties have arisen with regard to coanection with sewers, aspect, etc. It would be advisable here to observe that in future schemes, it building lines are reduced under similar or cumstances on one side of the street, arrange ments should be made to set them back on

### LIMITATION OF THE NUMBER OF BUILDING 140 ACES

The first alteration was the inclusion of a turther area of land to carry from eight to twelve buildings to the acre, the reason being that this area leaf itself to more equitable development than the karl unit which had been fixed. A further alteration enables us oren nxeu. A futtler afteration enables us to secure in the future a more gradual form of development. Another small port or was shedu ed under the draft scheme as six buildings to the acre, but after the inquity, at a bill the content of the future. at which the owner put a number of tacks be fore the inspector, this limitation was altered by agreement between the council and the owner, with the result that approximately ten buildings to the acre can be erected. As the result of opposition, the Local Government Board agreed to a certain area being scheduled at eight houses to the acre instead

### CHARACTER OF BUILDINGS, 1 FC

As a result of the inquiry, certain alterations were made in the compulsory and optional shopping and factory areas

With regard to the colouring of the final map, it should be pointed out that after the money it was found necessary to amend the whole at the colouring to fit in with the new "reference" which was required. The Ruislip Northwood Urban District Council and the Watford Rural District Council have to administer this scheme in their respective areas, and a copy of the map of the final scheme, so far as it relates to the part of the area in the Wattood rural district, has to be provided by the council.

### NEW STREETS.

There are some eighty-three new streets and footways to be constructed under the scheme and in the lines and of the width indicated on the may. The words stalicised require special notice, as the Local Government Board are insistent up in this being carefully consplered when the scheme is prepared. strictly adhered to atterwards. The district will benefit greatly in future by the linking up of existing streets and main traffic routes. and also by the improved access to railway stations, and the bringing of certain entlying areas into communication with others by streets with good gradients, instead of by streets which would have a gradient of 1 in 7. For instance, when one of the streets is made a distance of about three miles will be saved in communication between certain parts of the dis-

Another great benefit, combined with economy, will be derived by the laying out of the streets on the line of the outfall sewers to the existing and new sewage works. Arrangements have also been made to take the house drainage from these new streets. A certain amount of the cost of these sewerwill be defrayed by the frontagers, but such sum is not payable until the land is used sum is not payable until the land is used for purpose other than agriculture, except by special agreement. In my opinion, many thousands of pounds will be asked to the district by thus laying out the streets to serve all purposes for which streets are gaugeable possible. generally required.

Streets shown on the map of a greater width than 40 ft, will be constructed and paid for by the council, but it is possible that as the council now have the power to make up streets with grass margins, etc., that no extra expenditure will be incurred beyond that of Thirty widen scavenging and maintenance. ings of existing streets are shown on the map: these are in sixteen streets, and affect forty

four different owners.

When any plan is submitted for a new building to be erected in any of the existing streets the council can require the street to be widered to the width shown on the map. and will hear the cost. If the council require

a street to be videned before any plan for a new bin ding a submitted, they have power to do the work after giving two months notice. The cost of carrying out widenings in such case will include compensation for any buildings required to be about demolished, or removed, while the construction of the decessary change on I to tway and foreing off the land has about a bound by the

As his already been stated, the council have pover to lay out with glass margins, or plant with trees, or by ent as gardens, any paint with trees, or try can as gardens, any part of a y street reparable by the inhabi-tants at large, and the council may ir un-turn in good order such grass margins. thees, or gardens, and after or remox the same from time to time as one instances bequire they may add to the carriageway or footway my part of such grass margins, whether pointed with trees or land out is gardens, and . may from time to time alter or rearrange the may from time to time after or rearrange the parts of any street laid out as a carriag vay or tootxay respectively, provided that the council shall not obstruct access to premises abutting on any street from the metalled or

The owners of lands abouting upon any new street shall, mill such streets shall be not a highway repairable by the inhabitants at large, maintain such street, fences, grass mangins and trees, and embankments and other works therein a good order and condition. The council may include in any private to the other works which they may constreet works any works which they sider necessary for foreing off and laying out any street, or any part thereof, with grass margins and planting the same with trees, and apportion the expenses thereof as would be done under the Private Street Works Act The permission given to the council under this Act to lay out existing streets or any new streets with grass margins, etc., is very important, and, lesides leading to much amonity in the district, will also involve less expense in construction and upkeep; while in the case of streets about to be taken over by the local authority, a reduced expenditure has to borne by the frontagers.

In shopping areas where a carriage read is intended to form the principal approach. means of access to buildings, we demand that the kirb or outer edge of the footway of the street in front of such handlings shall be set back a width of 6 ft, from the side of the carnageway, and the width of the footway shall be reduced accordingly. The interven-ing space between the new line of the kerb and the original side of the carriagew cyshalf be so constructed as to fall towards the carriageway. This requirement is be quite new, and should prove of great value, as by means of it tradesmen's 200 ds can be delivered by vehicles standing out this set-back where they will not impede the fast traffic.

Particulars of the relaxation of by 'ac-s with respect of (1) new streets (short streets).
2) as to width and construction of such streets, where land for open spines is set apart, or wale streets are provided, or where the streets are formed around quadrangles. are all set out in the "General Provisions but it may be said that with the experience already gained in the district from the construction of streets of this character. council and the owners are satisfied that they are not only unlikely to be a burden on the ratepayers, but are more economical to construct, sewer, light, and scavenge.

If at any time the council desire they can do so upon giving six months notice of their intention. Without this provision it is probable that the whole scheme the streets shown would be wrecked. Where the map shows a new street exceeding 40 ft, in width, communicating at each end with a highway repairable by the inhabitants at large, the owner of the land over which it passes may, if he wishes it to be constructed, give notice to the council, who must construct the road within six months. Before the development of any estate can now be proceeded with the conneil can require the owner to furnish plans and particulars showing generally a scheme for the development or laying out of the whole

roding lines share

it may building has been etected, or is in course of erection, since the date of the re-solution of the council applying to the Board tor authority to prepare the scheme, nearer to a street than the building line shown on the map, the council may require the owner to pull down so much of the building as is nearer to the street than the said building line. In one case a building line of 7 ft, was shown, but an owner built in front of this very reasonable line, with the result that he will now have to pull down where he has

infringed. In streets where no building lines are shown on the map no buildings can be erected nearer to the centre of the street than 30 ft., means to the boundary of such street than 15 it. Provisions are inserted with regard to dwellings round quadrangles, but in any case there has to be a width of 60 ft. between There are also saving clauses with regard to lodges appurtenant to a dwelling house which may be built in advance of the building line, and also in the case of long frontages, say, a continual frontage of not less than 500 ft, where parts of such building may project 7 ft, in advance of the general building line, provided the projection does not exceed one-fourth of the total length of the frontige. The above building lines do not prevail in the case of shopping and business premises, the lines for which are practically set out in the "General Provision and vary according to the different widths of This is another means by which the streets. to secure the extra width of the carriageway to business premises.

Another important provision is that post, rail, or other obstruction shall be creeted in front of the forecourt of any shop ping premises; but cellarflaps are allowed. provided they do not project more than 3 ft. The building in advance of such premises. lines for buildings and projections on corner sites are specially provided for. Bay windows, chimneys and porticos are allowed to project 4 it. in advance of the building line, except in the case of a street exceeding 40 it., when they may project 5 ft., provided that these projections do not exceed threetiftlis of the total width of the buildings, and are not in any case nearer to the boundary of lands belonging to another owner than the extreme amount of such projections.

The proportion of the area of a site which may be covered by shops and other buildings is one-half of the whole area of the curtilage, with the proviso that in the case of a shop the extent of the buildings shall be measured a level of 14 ft. above the mean level the footway in front thereof. This appears of the footway in front thereof. This appears to be a reasonable provision. With regard to dwelling-houses, one-third of the whole area may be covered with buildings not exceeding one story in height and one story in the roof; but in cases of larger buildings the area covered shall not exceed one-fourth.

Certain provisions are made with regard to air space to habitable rooms. This is a most important provision, as, to a certain extent, it stops the erection of houses with kitchens tacing each other at a distunce of, say, 2 ft, or 3 it. away, which are practically always dark and have had ventilation. The clause with regard to the projection of wing build ings is another important one, the idea being to stop the addition at the rear of premises of long wing buildings, which retard the free action of the air and sunlight to the back at the premises,

LIMITATION OF NUMBER OF BUILDINGS TO THE ACRE.

In the clauses which have been fruined to buildings, regard has been had to the various ners in the district, the development of which have been commenced in a certain way. A limitation of four buildings to the acre is made to the highly residential part; six to the acre is the rate for the areas at present developing; eight and twelve to the are is also adopted in other areas for the some reason: while twelve is also adopted for the chopping and factory areas, where it - de sirable that more buildings to the acre

the shops and business premises it would not pay to erect better-class houses.

The unit of five acres has been considerably discussed, but the author cannot suggest any other scheme to carry out the limitation in a more satisfactory manner. The working of this land unit is not easy, and possibly about nine acres would be a good unit to adopt. In all areas, with the exception of land specially set apart for factories, shops, and business premises, private or professional dwelling houses, with necessary stabling, etc., can alone be erected.

No domestic building (other than flats or sets of chambers) erected in the area of twelve buildings to the acre may contain more than two stories, exclusive of any story in the

### CHARACTER OF BUILDINGS.

In selecting the areas to be restricted to buildings of the warehouse class, shops, or business premises, consideration was given to the lay of the land, the position of the railway stations, the convenience of access, and the amenity of the district. The area for factory purposes has been extended in the vicinity of the existing sewage works.

The clause relating to the height of windows in habitable rooms received considerable attention, not only by the council, but also by landowners, builders, etc., and the final form represents the utmost advance that could be made; but we believe it will be of considerable value generally to the health of the district. This provided that no bedroom or other habitable room shall contain less than 500 cub, ft., and in any dwelling one living-room at least shall be provided, which have a floor area of not less than 144 sq. ft., and contain not less than 1,132 cub. ft., and one bedroom which must have a floor area of not less than 132 sq. ft., and a cubical capacity of 1.000 cub. ft. It is hoped that considerable good will emanate from the provision which enables the council to require reasonable alterations in any building, the character of which is objectionable on account of the design, or the undue repetition of the design, or the materials to be used.

### SANITARY CONDITIONS AND AMENITY.

With regard to the vexed question of combined drains, a clause has been secured which it is hoped will solve the problem. Every providea house has under this scheme to be with a pantry or larder which shall have a window opening into the external air, and in the case of a dwelling-house adapted to the occupation of more than one family, a separate partry or larder shall be required for each. It is also provided that every family. domestic building constructed for use of more thrm one family shall be provided with senarate closet accommodation for each separate closet accommodation to.

family. To some extent these clauses will

family two families prevent houses being let for two families without proper accommodation being provided. Further provisions are desirable, but their inclusion could not be obtained.

Frequently private gardens are in such a state as to be a nuisance to neighbours, but under the Order, on the report of the surveyor that the nuisance can be abated, the council may do what is necessary, in default of the owner doing it, and can recover the cost. In the Buislip-Northwood urban district, is common with many others, a great deal of nutidiness and irregularity occurs in planting and fencing of forecourts of premises, which detracts from the general appearance of the district. To remedy this the council have power to agree with the owners r occupiers to lay out, plant and fence such forecourts, and maintain them at the expense of the council.

Advertisements are prohibited, except in the factory and shopping areas; but this prohibition does not apply to the exhibition of traders' names or notices on public buildings. Goods for sale or exhibition may be placed in front of premises, but not more than 3 ft. beyond the building line. This is a most useful provision, and will be of much assistance to the council in keeping the streets from looking untidy and irregular. Considerable criticism has been made of the clause dealing with the height of fences, but costing streets averaged a 25 ft set should be illowed both to secure artisan and clause dealing with the height of fences, but all excepting in a control instance working class buildings near the places of the cause of the council are glad to have got this cause, and they have not the

slightest difficulty in carrying it out. It is beneficial to the district to obtain solid walls or fences set back as far as possible from the

backline of any street.

A careful consideration of all the clauses. which are set out in more detail in the "General Provisions," should prove a great stimulus to local authorities to promote a town-planning scheme for the benefit of their community, for it is unquestionably a fact that the health, welfare, and general tone of that the health, we have a district would be greatly enhanced by similar provisions to those included in the Ruislip-Northwood Town Planning Order.

COMPENSATION AND BETTERMENT.
Only four claims for compensation have been received, and two of these have practic ally been disposed of. As to betterment, thirteen claims have been made, totalling some £11,000. The cost of preparing the scheme, from start to finish, was about £700. A statement of expenditure was given at the inquiry on the draft scheme, regarding the purchase of land for open spaces, cemetery, allotments, recreation ground, and destructor; but these items were struck out as they had been acquired under the various Public Health Acts during the progress of the scheme. The proposed expenditure on another cemetery site at Ruislip was dropped after the inquiry. The estimated expendi-ture for the demolition or alteration of buildings, for compensation in regard to property injuriously affected by the scheme, for roads abutting on open spaces, for making up or alteration to roads or lootways, and widenings, and for other purposes, such as fencing open spaces, etc., remains about the same we the scheme has been approved. The greater part of this expenditure, however, is not likely to be incurred for many years. The receipts estimated to be obtained from betterment claims are largely increased from what was originally anticipated.

A church school, built at a cost of about £7,000, has been formally opened at Great Harwood. The architects were Messrs. Woodhouse and Dean, of King Street, Manchester, and the contractors Messrs. John Feeitt and Sons, Ltd., of Blackburn,

The twenty-first list of members, licentiates and students of the Royal Institute of British Architects who have joined H.M. Forces for the period of the war shows a total to date of 51 Fellows, 373 Associates, 196 Licentiates. and 239 Students.

have been paid in full with statutory inverses.

A special sub-committee of the corporation of Glasgow, acting on the suggestion of ILM Office of Works, recommend that consideration of the proposal to remove the Tolbooth Steeple should not be proceeded with, and that, under reservation of the rights of all parties, they should withdraw the notice of November 17, in which they adhered to their previous determination to remove the steeple. Unless the termination to remove the steeple. Unless the notice be withdrawn, the Commissioners of Public Works will issue a preservation order as to the steeple, which will remain in force for a period of six months.

At the last meeting of the At the last meeting of the Society of Anti-quaries, the president, Sir Arthur Evans, occu-pying the chair. Mr. W. R. Lethaby, F.R.I.B.A., exhibited the head and foot of a carved and painted rood of the twelfth century from South Cerney Church, near Cirencester. These fragments were, he thought, probably the earliest important pieces of wood-carving remaining in the country. The figure must remaining in the country. The figure must have been about half life-size, and the type was closely allied to the Christ of the Deposition painting at Winchester, c. 1180, and to the earliest painted crucifix at St. Albans, c. 1200. The object was discovered accidentally in 1913, walled up in the church.

### THE REPLANNING OF ATHEMS.

The students of the Liverpool University School of Civic Design, accompanied by past graduates and friends, met the other day, at the invitation of Mr. Thomas H. Mawson, Hon.A.R.L.B.A., at the head office of his firm in Lancaster, to hear a lecture on Athens and to view the plans which have been prepared for the important commission with pared for the important common which the firm have been entrusted in the replanning of that world renowned city. lecture was illustrated by a large number of lantern slides, showing both the famous remains and the modern city which has grown up around them. The working plans for the scheme occupied the entire wall space of one of the largest draughting offices.

The first plan shown dealt with the topographical position of Athens in relation to Port of Pirsens and the railway system which is shortly to be connected with the trans-continental system at Salomka. The second dealt with the traffic problems of the city and environs and showed the roads for tram routes and motor traffic in relation to the railway facilities, both passenger and goods. It also showed the arrangement of factories, warehouses, and bonded stores connection with the railway sidings and the placing of the electric generating station from which each factory and warehouse will obtain its power.

Another plan showed the areas covered with ancient remains, from which everything modern is to be cleared, and on the sheet are indicated the new residential areas in zones for the varying classes of residents. Still another shows the park, playground, and forest areas connected by boulevards and parkways, in which the pepper tree and the ilex predominate.

These led up to the general plan, which, though it is of a most unusual size, being about 10 ft. long and half as broad, is crammed with fine detail in every part, and represents the labours of as many draughtsmen as could be employed upon it at the same time through many months. It shows the relationship of all the various factors dealt with in the sectional and diagrammatic plans in their relation to the governmental and civic

These were the sections of the scheme which attracted special attention, as did also the plans for the rehousing of the working classes, which were illustrated by beautiful perspec tive drawings. In addition, there are diagrammatic drawings showing the schools and a splendid new University Campus, which occupies an area of over one hundred acres. Fire stations, hotels, and other public and semi public buildings are all illustrated in a manner which shows that town-planning in Athens is being studied in a most exhaustive manner. and this fact impressed the students consider-

At the close of the examination of the plans two questions were asked. Firstly. Athens being replanned, and secondly, how

is the work to be paid for?

Mr. Mawson, in his reply, explained that Athens is at the present time growing enor mously not only on account of the added importance which has come with the additional territory obtained after the second Balkan war, but also by the expansion of its maritime trade and the increased tourist traffic, which is alone enough to justify a town-planning

scheme of considerable magnitude. With regard to cost, Mr. Mawson explained that Greece, being at present a poor nation. could not afford to squander public money in unco-ordinated effort and temporary makeshifts, which could only be indulged in by nations like our own with money to waste. He reminded his hearers that a town plan was not a scheme for spending public money, but for saving it. It resulted from the recognition of the fact that the city would grow whether we hked it or no, and arranged in advance that it should grow in the public interest ac cording to a co-ordinated plan, which should develop on economic principles both in regard succeeded in producing a city which is, at least, potentially beautiful as well as practical, zodiac are a common sculptural motive in

# Currente Calamo.

We have heard nothing more of Mr. Howell J. Williams' indictment of the City Bridge House Estates Committee and its strict insistence of the letter of the law with regard to the large site his company took before the commencement of the war, since we announced on this page in our issue of December 15 that a deputation from the Waster Builders' Association is to wait on Mr. Asquith. In strong contrast with the action taken by the City authority, the City Press points out that the London County Conneil does not appear to be acting on like lines. In March of last year the Council granted as from the following September a ninety-nine years' lease of a plot in Aldwych. The restrictions imposed by the Treasmy preventing the prosecution of the scheme, the Conneil less agreed to postpone until March next the date at which the lease shall commence to run. That is fair and reasonable, and builders have a right to expect that the City will do the same.

We are glad to note that Mr. Hugh Watkins, quantity surveyor, of London, has arrived in Winnipeg, and that he and his two assistants have commenced their duties in connection with the New Parliament Buildings, which are being erected from the designs of Mr. F. W. Simon, F.R.I.B.A. Quantity Surveyors hitherto have been unknown in Canada, but a strong movement is on foot to insist on their employment, as in this country, for all buildings of any importance. Under the existing system in Canada an architect is engaged to prepare the necessary drawings and specifications, which are forwarded to each contractor who has signified his intention of tendering for the work. Each contractor then sets to work to prepare the necessary measurements of materials and labour to enable him to arrive at the amount of his tender. This does not apply to build ings alone. At the present moment a Canadian city is calling for tenders for a gravity filtration plant- plans and specifications to be furnished by the contractor. Thus, assuming twenty contractors tender for a job, nineteen sets of quantities are useless and waste labour. One result, of course, is that careful and accurate estimates are rare, and another that no reliable basis exists on which any extras or deductions can be arrived at.

The following, by the first living English novelist, of whom, as a member of our own calling, in earlier years, many readers have warm remembrances, appeared in the Times on Christmas Eve, and its reproduction is permitted: --

THE OXEN.

Christmas Eve, and twelve of the clock.

"Now they are off on their knees."

An elder said as we sat in a flock.

By the embers in hearthside case.

We pictured the mock mild creatures where They dwelt in their strawy pen.

Nor did it occur to one of us there

To doubt they were kneeling then.

so fair a laney few helieve In these years! Yet, I feel, If someone said on Uhristmas Eve "Come; see the oxen kneel

"in the lonely barton by yonder coomb Our childhood used to know," I should go with him in the gloom, Hoping it might be so. Thomas H.M. THOMAS HARBY.

less is and occupies of business and rest dent al properties, burdons and responsibilities which should be shared by all." The Committee is fast becoming a really national organisation, for already ninety four mum epul authorities have agreed to join in the presentation of the memorial. These include the following county boroughs: Birrow in Furness, Bournemouth, Brighton, Croydon, Giteshead, Rochdale, Tynemouth, City of York. The following towns are also among those who have joined the Committee: Chat ham, Cheltenham, Kidderminster, Kirkcaldy Perth, Scarborough, Shrewsbury, and Wool wich. The Committee say that "the scheme s not only an unjust one, but it is also in expedient, because it involves a very con siderable and unnecessive waste of th country's energy and time. By the system of insuring separately each building, or it contents, a great waste of clerical work, both on the part of the Covernment officials and or the existing fire insurance companies who are acting as agents for the Government in the matter, is necessitated. This is especially the case where small property's are concerned Inasmuch as, at the present crisis in national affairs, it is important flat all available energy should be directed to the prosecution and successful issue of the war, the waste of time and energy involved in collecting premitums from individuals is obviously a serious

A memorial has been presented to the Prime Minister and other members of he Majesty's Government from the British Constitution Association, of 11, Tothill Street London, S.W., December 21, 1915, stating that the memorialists were greatly concerned by the introduction of the Increase of Rent and Mortgag - Interest Bill into Parliament and at a meeting of the Conneil and Committee of the Association to consider this measure the following resolution was passed

"That this meeting views with alarm the Increase of Rent and Mortgage Interest B'll now before Parhament as being an unnecessary violation of the principle of the sanctity or contracts upon which the private relations or citizens and the public relations of States alake depend, and desires that a communication be addressed to the members of the Government in support of this view." For the State to interfere to ke p down the rent of houses or land, the rate of wages, or the note of interest on capital, is to tax unfairly the owners of the particular property in terfored with, and, so far from being justified by a state of war, is made more unjustifiable at a time when the sufferers are least able to be a the imposition; especially must this be the cas, where one class of property is alone deast with, for instance, where landlords and mortgagoes are torbidden to raise rents and interest while the manual labourer is obtuning a large increase of wages. Now that the seeds of the State have called for a largely pressed tax upon houses as well as other property, to exclude this one kind of property to the Pone parall cases from the general rise in prices is Transport to the character of the interest

some of the more complaisant heralds of those publishers who mefer "notices" to reviews, and, not soldom, to write them themselves! It the war, which has 'it us all hardly, and killed many of us, is in any way responsible, it adds another catastrophe to the many which may prove irreme hable.

### \_\_\_\_ OBITUARY.

We regret to record the death Arthur Hughes, the last of the pre-Raphasiite painters, which took place at Eastside House, Kew Green, on Wednesday, in his eighty fourth year. Born in London on January 27 lourth year. 1832, the third and youngest son of Edward Hughes, who came from Oswestry, he was some three or four years the junior of Millais, Holman Hunt, and Dante Gabriel Rossetti. Hughes was educated at Archbishop Temson's Grammar School in Lambeth, where his precocity in drawing gained much admira-tion. At the age of fourteen he entered the School of Design at Somerset House, where he made rapid progress under the tuition of Alfred Stevens, and a year later was admitted to the Royal Academy Schools, where he was a pupil of Soames, and gained the Modal, as Millais had done a few years the Medal, as Millars had done a few years before. Hughes' first Academy picture, "Musidona," was hing when he was seven-teen, and three years later his "Ophelia" was hing with "Ophelia" and "The Hughenot" by Millars and Holman Hunt's "Hirching Shepherd." Hughes's intimate "Hireling Shepherd." Hughes's intimate association with the Brotherhood led to his executing one of the now perished frescoes,
Arthur Borne to Avalon, done under the Arthur Berne to Avalon, done under the direction of Rossetti in 1858 m the old dehating hall of the Oxford Union. By that time he was already considered by the P.R.B., and by their champion Ruskin, as an acquisition to their inner strength. His portrait appears in "The Proscribed Royalist," painted by Millars in 1853. "April Love," paratree by Millars in 1853. "April Love," exhibited at the Royal Academy, 1856, was praised by Ruskin as "exquisite in every way." and was bought by William Morris. Of his "Nativity." exhibited in the Royal Academy, (1956). bis "Nativity," exhibited in the Royal Academy of 1858, Ruskin wrote: "Quite beautiful in thought, and indicative of grander colourist's power than anything in the rooms; there no other picture so right in manner of work, the utmost value being given to every atom of tint laid on the canvas." The "Nativity," "Annunciation," and the "Long Engage-(now all the property of the Birmingham Corporation) were painted for Mr. Plint. In 1857 the Pre-Raphaelite Exhibition in London, to which Mr. Hughes was a con-London, to which Mr. Hughes was a contributor, led to a selection of pre-Raphaelite work which included his "April Love" and "Home from the Sea" being sent for exhibition to America. For thirty years Hughes contributed to the Academy, and later on also to the Grosvenor and New Galleries. The "April Love," painted in 1856, hangs in the Tate Gallery, and his "Home from the Sea" in the Ashmolean Museum at Costone. The weakly widely known in later

In Bridge Street, Warrington, there have been opened new branch premises for the Midland Bank, Ltd. The builder was Mr. Peter Edwards, of Chester, and the architecture was Mr. T. B. Whinney, F.R.L.B.A., of Old Jewry, E.C.

Mr. Temant aumonited in the House of

the Sea" in the Ashmolean Museum at Oxford Re was also widely known in later

years as an illustrator of children's and imaginative books. By his marriage in 1855 with Miss Tryphena Foord (now in her eighty-fifth year). Mr. Hughes had two sons

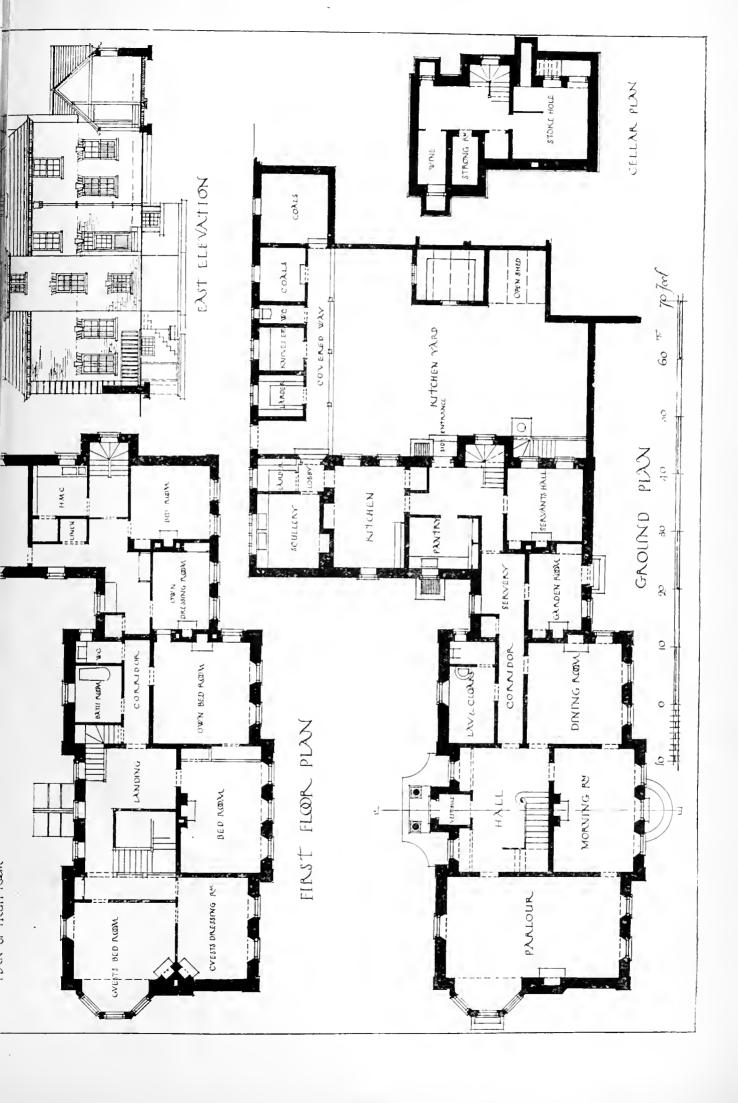

and three daughters, all of whom survive their father. Both his sons, as well as his nephew, Mr. Edward Robert Hughes, are artists. The funeral took place at Richmond

Cemetery yesterday (Tuesday) afternoon.

Mr. Tennant amounced in the House of Commons the acquisition by the authorities of the Industrial Museum, Horseferry Road, Westminster, as a rest house for the large number of men from the front and the home Commons the acquisition by the authorities of the Industrial Missenia. XFORD CIRCUS, AND INCLUDING THE NEW BRANCH OF THE UNION OF LONDON tects supervising the work for Messrs. Dickens and Jones, Messrs. Stephens and Munt.

# Our Illustrations.

VENICE, AND THE CHURCH OF ST. FOSCA, TORCELLO.

A description of this plate will be found in our first article this week.

NEW PREMISES, REGENT STREET, IN CONTINUATION OF REBUILDING OXFORD CIRCUS, AND INCLUDING NEW BRANCH OF THE UNION OF LONDON AND SMITH'S BANK.

We published a double-page view, from the Academy, in our assue for September Royal Academy, in our assic for September 13, 1912, showing the comprehensive scheme prepared for the approval of the Office of Woods and Forests by Mr. Henry Tanner, F.R.I.B.A., the architect subsequently appointed for the rebuilding of Oxford Circus and upper part of Regent Street adjoining. This work is still in progress, and the several properties are gradually developing as their leases fall in. To insure uniformity in the contiguous frontages near to this great crossing, caused by the junction of Oxford Street and Regent Street, the Crown decided that all re-crections incidental to this architectural recasting of these two great Metropolitan thoroughfares at this point Metropontal thoroughters at this point should comply with the adopted improvement scheme designed by Mr. Tanner. The illustration published herewith shows the prominent section of the undertaking situate on the eastern side of Regent Street, extendbittle Argyll Street. At this corner a branch is being built for the Union of London and Smith's Bank, which will, therefore. be located in a very splendid position and have a considerable frontage facing a south westerly aspect. The next portion of the same block of buildings will be occupied by Messrs. Dickens and Jones' drapery and cos tume emporium, which business is now, we understand, a branch of Messis. Harrols, Limited. The architects charged with the Supervision of the work generally are Messis. Stephens and Munt. of Chelsea, and in so far as the bank is concerned the execution, thus superintended, has to be done to the approval of Messrs. Dunn. Watson, and Curtis Green, of Lincoln's Lim Fields, the architects acting for the Union of London and Smith's Banking Company. This branch bank building is from their plans, and will have a handsome and spacious banking hall, directors' room, and manager's office. This work is to be in accordance with the bank architect's specifications. The entire frontages, however, are being built strict compliance with the designs of ? Henry Tanner, of Carlton Chambers, Regent Street. We hope shortly to publish some large-scale drawings of his details, and we are likewise indebted to Mr. Tanner for the loan of the elevations printed among our plates to-day. Messrs, Stephens and Munt have designed the grilles, and have fitted up their shopfronts in "Kopperoid" steel in an effective and unobtrusive way, but we found it hardly practicable to show these properly to so small a scale in our illustration of the elevations. The builder who is carrying out the contract for the structure is Mr. James Carmichael The steelwork is being made by Messrs. Moreland and Sons, who are doing the hollow-brick floorings. Messrs. Chubb will supply the strong-room iron doors, The heating and hot-water service is entrusted to Messrs. Richard Crittall and Co. The steel windows are being made by the Crittall Manufacturing Co. The façades are all in Portland stone with green West-

the designs of Mr. E. Guy Dawber E.R.I.B.A., cannot fail to be appreciated The building as most unpretentions and very The building as most unpretentions and very well arranged, but is handled with dignity and breadth of design so well in keeping with the old types of Instoric building in this dis the old types of instoric building in this district. The walls are of local stone with dressings, and the roofs are covered with stone slates from the Eybord Quarries, Stow-in-the Wold, Messes, Sells Bros., of Fairford, erected the hell of the house. We make a beautiful the data of the large of the large of the Lindse of gave a sheet of the details of the Lodge or November 24 last, and a prospective perspective appeared in our issue for June 23, 1911 from the Royal Academy of that season.

The corporation of South Smelds increase proved plans for additions to the Tynemouth Jubilee Infirmaty.

The Stomfundge Board of Guardians approved the erretion of a receiving home for children at Xoroon contage homes at a cost of

Mr. L. Adams has resigned his position as surveyor to the Mayheld Rural District Council on his appointment to a

The offices of the Read Board have been moved from Queen Anne - Chambers ac 3 : Cromwell Read (two minutes from South Ken sington Station).

A new Biptist church is to be built in Derwent Street, Blackhill, County Durham, from plans by Messrs, Davison and Pair, of New astle-on-Tyne.

The inchin district council of Saxmund bain, East Sulfolk, have appointed Mr. E. F. Wilson, of Kingsbradge, South Devon, to the post of surveyor and inspector of nuisances.

Acting upon a report from medical specialists, the Kensington Borough Council have grainted Mr A R Finch, the borough engineer and surveyor, complete treedom from daty for a period of three months.

The lighting restrictions at Dover leave had a very serious effect on the corporation electricity undertaking, the less upon which for the year ending March 31 next is now estimated by the borough electrical engineer at £2,090

The plans of Messis, Withers and Mercdith The plans of Messis, wheners and agreement of London, have been adopted for the relatild-ing of the Queen Street Wesleyan Chapet at Scarborough, which was destroyed by fire in Pebruary last. The estimated cost is £2,000.

A return issued by the Assessor of the cuty of Glasgow shows 1 total of 3,957 unoccupied dwellings in Glasgow, of winch 2,633 are houses of one apartment, 4,791 of two apartments, 766 of three epartments, 259 of four apartments, and 556 of five apartments and over. Shaps and other unoccupied premises number 5,692, making a combined rotal of 14.559.

A new home for men in connection with the Royal Institution for the Blund at Bradford has been formally opened. It is proposed to has been formally opened. It is proposed to baild a workshop on the grounds of what was once Highfield House, where they can carry on their brushnaking, basket weaving, and other industrial enterprises, and establish a centralised colony for the blind. Plans have been prepared, and the estimated cost of the building is £5,000, but the work will not proceed until after the war

At the last meeting of the urban district At the last meeting of the urban district council of Chudderton, the chrimman stated that the clerk had received from the architects, Messrs, Taylor and Smuister, a statement of the cest of the new town half. The total contracts made amounted to £14,035-15s., architects' commissions £1,141, loan for suc £1,700, making a total of £17,474. Sanct on was obtained for loans for building, etc. £15,339, site, £1,700, total £17,559. One of the things very rare in public life was that the bill came out below the estimate.

are all in Portland stone with green Westmoreland slates for the roofs, capped by ornamental lead ridges. The treatment adopted for the fenestration is primarily governed by ample lighting provision with as little obstruction as possible, and the intervening pavilions are flatly managed to avoid shadows. These pavilions lend emphasis to the lay-out of the design, and give architectural distinction to its composition.

"BURDOCKS." NEAR FAIRFORD, GLOUCESTER.

These copies of the general working drawings of this stone-built house erected in the beautiful neighbourhood of Fairford, from

# Correspondence.

MILIARY EMERGENCY HOSPITALS

To the Editor of The Bunding News Sir.—My friend Mr. Skipper has just willed Sin. My friend Mr. Skipper has jist eidled by affection to a tenort in your columns of New reto. 17, 1945, or a very interestrict leading given by Mr. J. Sayon Sach. As I have that you would not wesh more a cope of any kind to be perpetuated in your pages. I feel sure that you will allow me to stree that instead of my name that of Colonel Graffiths. Commanding Officer of the Phys. Eastern General Bespital should appear.

For many years, Cd. Graffiths has, to my kind vehicle been making release study of nospital construction. When the various continuity has no part is spital, sind with the a rate of of Mr. Sompth, these "hospitals in 51 car became sold that sold parameters for a large of yatching their development is in times per varieting their development is in times per

watching their development is in times, per laps, evaluate critics not dedesitor and co-tod. Griffiths must be given the whose credit of the conception of this type of hespital, and to Mr. Skipp of the credit of carrying out of most administration to Conflicts, ideas and plans.

wish to set this matter straight at oneas in matters of this kind it is sometimes in possible to determine who at the real init ators of a new departure, and is this assume it gives me very great pleasure to be able to in de this correction without being called sponto depreciate the work of anyone ease. I am setisfied that only in future years a 21 we realise to the full how much we eve to this new method of hispital construction, and to tol. Criffel's for his persest at advency and harliant carrying out of the open dramethod or freatment of disease and injury other than those andread by the tiberce for his. The has, I am continued solved the go at blem of hospit d treatment for insured rate ints, and although a may be some little time befor-the method comes into full yogue, there can he little doubt that, in the long run, insured patients will be brought together the these hospitals, there to be treated by their Panet doctors and by these called an thousant with

(RISTAL PAINE SCHOOL OF ENGINEERING. Mr. P. Griffith, President of the Society of Engineers, in distributing certificates to the students at the Crystal Palace School of Practical Engineering on Wednesday, said the future of this and of every country lay in the hands of the engineer. In many respects in commerce, trade, and science we had been taking things too easily and letting our rivals get ahoad. Now, under the stimulus of the war, the nation was waking up, and it was our duty to keep awake, make a fresh start the world's race, and maintain the which our ancestors won. Mr. H. J. Buckland, on behalf of the Crystal Palace Trustees, said the members of that body had both collectively and individually, worked extremely hard to obtain outside assistance in order to carry on the school, but had failed to obtain financial help.— Unfortunately, the loss in connection with the school for 1915 ran into four figures, and, the Trustees having no money to meet the deficiency, felt they could not carry on the school, and their responshilling for it ended with the close of the present torm. However, the Principal and his brother had decided to carry on the school, and during the next term would find more suitable and up-to-date premises for the pursuitable and up-to-date premises for the purpose. Daring its forty-two years of existence the school had turned out something like 1,200 engineers, who now occupied important posts in all parts of the world. Mr. J. W. Wilson, the Principal, amounced that the school's roll of honour included nearly 200 past and present students engaged in the country's service. The school, he said, had always paid its way until the war, although it had never had any private assistance, and it was not going to close. On January 5 they intended to start again, and zo on as before.

ROMAN TILES IN LANCASHIRE, - At the December meeting of the Antiquarian Society, held at Chetham's Hospital, Manchester, Major Less, J.P., of Egetton Villa, Heywood, read a short communication on some Roman tiles found at Castleshaw in 1907. One bore an inscription, two had graffiti markings upon them, and another, evidently a roofing tile, had been pierced with a hole which still retuned the iron nail once used for fixing it to woodwork. The inscribed tile was of unusual interest, for it hore the name of a cohort of Roman troops. Tiles having a similar im-press had been frequently found at the neighbearing Roman rout at Slack, near Hudders-neld, distinctly bearing the mark COH IIII BRE, indicating, in all probability, the fourth cohort of the Breucores from Pannonia, and known to have been in Britain. The Castleshow tile stamp closely resembled those found at Slack, but unfortunate abrasions or decay had rendered the lettering somewhat uncer all that remains clearly visible being HII BR with an indication of a final tan: all E. A tile fragment bearing the first portion of a very similar type of impress was found in Manchester early in the nineteenth century.

THE URIGIN OF THE NEOLITHIC CELT. -A paper on this subject was read by Mr. Reginald Smith before the Society of Anti-quaries at their last meeting, held at Burlington House, S.r Arthur Evans, the President. occupying the chair. The lecturer, who exhibited many specimens and lantern slides. traced one important class of flint weapon trom the side scraper or "point" of Le Worstier. The gap was in his opinion hrdged by several intermediate forms recently hredged by several intermediate forms recently femiliar at Grime's Graves, Norfolk. The date of that industry was not an essential factor in the argument, and he claimed that there existed a curious connection in form between Grime's Graves specimens and palaeoliths of late type, from brick earth and possibly other deposits in the Thames Valley. The small platform often seen at one angle of the base of the triangular hand axe seemed to represent the hilt of percussion or thickening on a side scraper or "point" from Le Moustier; and it's disappearance marked a change of function, the apex becoming the butt of the celt, and the butt of the hind axe turning into the curting edge of the celt. Granted that form a ane was no criterion of date.

form-essociations were the basis of prehistoric research, just as plant-associations were the mainspring of ecology. He argued that there was no great difference in time or civilisation between the flint-workers of Grime's Graves and the early cave-dwellers of France.

### COMPETITIONS.

Govan Secondary School.—Govan School Board, at their monthly meeting on Wednesday night, adopted plans for a new secondary school which is to be erected in the Hillhead district of Glasgow. The successful architect was Mr. Matthew Adam. Lic.R.I.B.A., 169, Hope Street, Glasgow.

### LEGAL INTELLIGENCE.

What is Public User of a Road?—Wilding v. Billington.—In this action, tried in the Laneashire Chancery Court, the Vice-Chancellor, Mr. Stewart Smith, K.C., has given judgment. The plaintiffs, Messrs, S. B. Wilding and Sois, contractors and decorators, Preston, are the owners and occupiers of land through which runs a narrow road with outlets in Lune Street and Hill Street. The plaintiffs claimed that the road was a private way, and they sought an injunction against the defendants, who are owners of adjoining property and whose case was that the road was a public thoroughfare between the two streets. It appeared that at one period there were gates set up which had decayed, and in 1913 the plaintiffs put up other gates. These were removed by the defendants in March, 1914, in the assertion of what they deemed a public right, as little damage being caused WHAT IS PUBLIC USER OF A ROAD?-WILDING 1914, in the assertion of what they deemed a public right, as little damage being caused as possible.—The Vice-Chancellor said course public right, as little damage being caused as possible.—The Vice-Chancellor said counsel for the defendants, exercising a wise discretion, had abandoned a claim to a private right, and the only question that remained was whether there was any and what public right of way over this land. The disputed road, which formed a continuous passage between the two treats was tortugus and national processing the continuous passage between the two treats was tortugus and national continuous passage. tween the two streets, was tortuous and narrow, and in some places two carts could not pass. The claim of the plaintiffs was founded entirely on user. For the defendants it was said that as far, at any rate, as foot passengers were concerned, the user had extended gers were concerned, the user had extended for many years. There was also evidence that wehicles and sheep and cattle had used the road. At one time in its history a suggestion was made to the corporation of Preston that they should take over the road and keep it in repair, the owners being willing to give up their rights, but the corporation did not assent. On the evidence as presented he found no intention to make a dedication, and, in his opinion, the user, where it had not been by persons who had business there or passed through under some private right, had been by persons who had business there or passed through under some private right, had been by members of the public who were either tolerated or unobserved by the owners. He came to the conclusion, therefore, that the plaintiffs were entitled to the injunction they asked, and he fixed the damages at 10s, the defendants to bear the costs of the litigation. In his opinion, the defendants had acted with In his opinion, the defendants had acted with the single purpose of establishing a public right which, in good faith, they believed existed. The rights of the parties being once determined, it would seem that the convenience of those who desired to attend St. Wilfred's Church. Preston, or to pass over the land for legitimate purposes might be the subject of arrangement to which the plaintiffs might see their way to agree, while still preserving their own rights.—Mr. Glover, plaintiffs' coursel, said he would convey his honour's suggestion to his clients.

### ENGINEERING NOTES.

# Building Intelligence.

EDINBURGH.—The "Sandeman Memor, 1 Halls," as the new building erected in Ashley Court, High Street, Edinburgh, behind Moray-Knox Church, in connection with the work of the Moray-Knox and St. An drew's United Free Churches' Mission Board, has been named, were opened last week. The old tenements in the court have been removed, and a completely equipped mission centre erected, comprising a large hall, seat ing about 400 persons, two large clubrooms .committee-rooms, service kitchen, office, and committee rooms, service kitchen, omee, and caretaker's house. In the external design an effort has been made by the architects.

Messrs. J. N. Scott and Lorne Campbell, to render the new building in keeping with the characteristics of the Old Town architecture, and the change in the old court is in the nature of a city improvement. The cost has been £2,000, exclusive of the purchase of the site and the laying out of the court.

QUEBEC .- The new Union Station, which is being built from the designs of Mr. H. E. Prindle, is a comparatively low building in the style of the chateaux on the Loire. The build ing is located on the property bounded by St. Paul, Henderson, and St. Roche Streets. which has been entirely re-arranged, with new tracks, coach storage yard, express yard, freight sheds, and freight office. The roof of the central block rises 90 ft., the roofs of the wings being 50 ft. high. The exterior walls are faced with a dark brick, laid in Flemish bond in white mortar, with deepraked joints with stone facings and gramte base. The roofs are of copper. The entire building rests upon a system of concrete piles; the floor and part of roof construction are of reinforced concrete, the sloping surfaces of roofs are of gypsam block, the frame throughout is of steel encased in concrete, and the walls are of masonry. There are 450 concrete pedestal piles, contaming 400 tons of structural steel. The building will be electrically illuminated. The trainsheds will be of low umbrella type.

The station proper will cost approximately \$300,000 when completed. The operations are being carried out entirely under the direction of Mr. D. H. Mapes, engineer of buildings, Canadian Pacific Railway, Windsor Station, Montreal. The general contractors are the Downing-Cook Company, of Montreal.

Glasgow. - Operations are practically completed by which the building of the Glasgow Royal Exchange in Queen Street has been reconstructed. Externally it has always been one of the most striking structures in the city, with its dignified walls and massive columns. It was the residence of Mr. William Cunningham, of Lainsbaw, one of the most successful of Glasgow's "tobacco lords," who succession of Giasgow's Totacco fords, who built it in 1778. It came into the possession of a committee formed to institute a new Exchange in the city in 1827, and two years later was opened as the Royal Exchange. The entire building has been remodelled internally, under the advice and guidance of Mr. Colin Menzies, architect, Glasgow. There are three floors. On the ground floor is the main room of the Exchange—a lotty apartment, decorated in red, white, and gold the massive columns dividing the floor space along the north and south sides. A considerable quantity of the gold used in the previous decoration was again utilisel in the present scheme, in which are two large elec-troliers bearing fifty lamps on each New entrances have been made, and a fresh staircase, all of which afford increased floor space amounting to nearly 300 square feet. Two additional fluted monoliths have been introduced, thereby retaining the proper propertion of the columns to the general design. On the first floor are the underwriters' rooms and the secretary's office, together with a suite or other offices. The corridors are firms, nearly all of whom are associated with the Exchange. A feature of this nortion of the building is the dome, which was part of the original mausion. The plaster decoration to the cantrol of the original mausion. The plaster decoration to the cantrol of the original mausion. The plaster decoration to the cantrol of the original mausion. The plaster decoration to the cantrol of the original mausion. ### WAGES MOVEMENTS.

SHEITHED.-The operative painters of this SHITHED.—The operative painters of this city have received an advance in wages of a halfpenny per hour (from 82d, to 9d,) under the award of Mr. E. A. Greer, K.C., who was appointed by the Board of Trade to act as arbitrator between masters and men. The application on behalf of the Sheffield branch Society of Operative Painters was for an increase of 1d, per hom.

### TRADE NOTES.

---

Boyle's Inest patent "air-pump" venulator has been applied to Tovil School, Maidstone, Mr. George Reavell, A.R.I.B.A., of Alawick, is taking into partnership Mr. W. Ardhur Tebbs, who has been for thirteen years his chief assistant. The irrn will continue the practice at the old address, Lloyds Bank Chambers, Aliwick, and at the branch office at 51, Bridge Street, Morpeth.

### ---WATER SUPPLY AND SANITARY MATTERS.

WATER SUPPLY AND SANITARY

MATTERS.

THE SEWERING OF BENTLEY, NEAR DONCYSTER — Mr. A. G. Druny, D.Sc.,
M. Inst.C. E., held a Local Gov rument Board
inquiry at the Bentley Council Schools, on
Thursday, into the application of the Bentleywith-Arksey Urban Council for power to
borrow an additional £2,030 for sewerage and
sewige disposal works. The Clerk to the
Council (Mr. Pys) mentioned that in 1881 the
population of the parish was 1,484, in 1901
it was 2,405, and in 1911 it was 6,497, while
the estimated population now was 7,300. The
tateable value of the purish is £65,542 2s. 64.,
and the assessable value £54,521 11s. 5d. The
isalance on outstanding loans is £34,028, exclusive of loans under the Housing of the
Working Classes Act. The present application arose chiefly out of a contract for sewerage works entered into in 1915, and the excessof expenditure over estimates was accounted age works entered into in 1915, and the excess of expenditure ever estimates was accounted for by the nature of the ground—the running s in 1 and water—and the bad ground generally in the Boutley Toll Bar district, which necessi-tated the timber being left in the trenches. A bad state of ground was also met with it the new pumping station in Bentley village, and necessitated an expenditure for exceeding It the new pumping station in Bentley village, and necessitated an expenditure for exceeding the estimate. The original estimate for the work was £11,936, but the contract was let for £12,458. A representative of the engineers (Messis, Balfour and Sons) gave details of the cost of various portions of the work, and in reply to the Inspector, said the whole system now worked effectually. Dr. Wilson (representing the West Riding County Council) said he did not object to the application, but colliery villages had a way of increasing very rapidly, and in all probability the time would soon come when the scheme would have to be enlarged, and it was necessary to look ahead.

### STAINED GLASS.

Newcastle-on-Tyne.— A three-light stained-glass window, erected to the memory of the late Mrs. W. B. Reid, of Cross House, was inveiled on Monday in St. Luke's Church, Newcastle. The subject is "Faith, Hope, and Charity." The figure of Faith is represented helding in one hand a cross and in the other a Bible. Hope is portrayed habling in has hand a Bible. Hope is portrayed holding in her hand an anchor, and is looking up to Heaven. Charity is represented by a female figure mothering and succouring two orpolishers. In the centre light there an angel introduced into the car

# Our Office Cable.

Fre. I Marshat Sir John French on his Fig. 4 Marshal Sur. John Frisch on his departure from France pand a striking tribute to the Artists Rifles. O.T.C., which furnished his guard of honour. He said: "Officers and men,—It is singularly appropriate and nothing could give me greater riate and nothing could give me gassess cleasure than that your regiment, the Artists Rifles, should be the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of the last British of th beasure croops that I shall see in France. You have dene wonderful work since you came out; you have furnished some of the finest leaders of the Army from your ranks, and in doing so you have suffered perhaps greater losses than any other regiment out here. You have done great work, and I have no doubt that you will continue to do so till the end of the or will some the folial solution the end of the campaign. I am very pleased that the guard of homour on my leaving France should be supplied by the Artasts Rifles. I wish you goodbye and good luck."

Some antiquities of Buiton Abbey have been presented to the Burton Club by its vice chairman. Mr. S. Eriggs, J.P., the executor of the life Colonel J. A. Bindley, to whom the relies belonged. Colonel Bindby lived at the residence known as Burton Abbay, which occupied the site and formed a portion of the old Benedictine monastery on the north bank of the Trent at Burton). and this a few years ago was taken over by the Barton Club as their new quarters. The gifts include a plaster cast of the conventual seal of the abbey of the twelfth or thirteenth century, and a cast of the seal of the first abbot, William de Melburne (1197-1210), used in compaction with that of the monastery. These are framed in wood, 300 years old, taken from St. Werburgh's Church, Derby. On one side of each seal there is engrossed on vellum a brief history of the abbey and a complete list of the abbots (thirty five in number) from 1026 to 1534. The history states that the abbey was dismantled at the dissolution of the monasteries, and its possessions handed over by King Henry VIII, to his secretary, Sir (atter-wards Lord) William Paget, ancestor of the present Marquis of Anglescy.

Writing with reference to the recent dis writing with reference to the recent dis-covery of the foundations of Wulfrie's round church at St. Augustine's Abbey, Canterbury, mentioned last week, Mr. G. McN. Rush-forth, F.S.A. points out that the main in-terest of the important discovery is that it adds another to a list of English round or polygonal churches which covers the whole of the Anglo Saxon period and extends up to They are all the beginning of the Crusades. They are all of Continental and ultimately Roman origin and inspirition. It was about 680 that Wilfrid built a round church of St. Mary at Hexham. Some time between 959 and 975 the abbey church of Abingdon was rebuilt in the same form. About 1080 Robert of Lorraine, Bishop of Hereford re-erected his cathedral, as William of Malmesbury tells us, after the pattern of the most famous building of his native land. Charlemagne's round church at Aix la Chapelle. And now we find, says Mr. Rushforth, that, some twenty years earlier. Abbot Wulfrie had built a round church at Canterbury; and the plan suggests that it too may have been derived from that of Charlemagne's Chapel Royal, or possibly from that magne's Chaper Royal, or possibly from that of the not much later rotunda at Fulda. In discussing these buildings in his "Lom bardie Architecture." Comm. Rivoira has well pointed out that all these circular plans are derived directly or indirectly from Roman models; and that, in choosing this form for the Church of the Holy Sepulchre itself, Constantine was only following the pattern of a typical Roman mausoleum on the grand scale.

At a meeting of the Midlaud Association of Local Government Officers in Birmingham last Monday week, Mr. Henry E. Stilgoe, city engineer and surveyor, gave an address on "Destruction of Macadam Streets," from notes supplied by Mr. Thomas Arnall, of the Birmingham Public Works Department, who was prevented from being present to speak on the subject. Mr. Stilgoe dealt generally with the chief causes of destruction, Set of the emplaced that I have its pronouncement from the Lorder may be them to the association of experts with tegar I to the ment of the inverse mest in pertant matter, and the most given a health of erman e.

### PARLIAMENTARY NOTES

RESTRICTION ON INCREASE OF RENT.—In the House of Lords on Tuesday in last week, the Marquess of Lansdowne moved the second read Marquess of Lansdowne moved the second reading and explained the purposes of the Increase of Rent and Mortgage Interest (War Restrictions) Bill, a measure which had already passed through the House of Commons. The noble Marquess said that while the Bill restricted increase of rents of working-class houses, it was quite impracticable to legislate for the purpose of vestivety rate of warms. A wegen it desired of restricting rates of wages. A general demand for an all-round merease in wages would be disastrous, but the Government had by other legislation done something to discourage such a demand. Earl St. Aldwyn said the Bill could only be justified by the fact that the country was at war, and hoped it would not be taken a a precedent for legislation in the future. He could not understand why, if the Bill were intended only to apidy to the working classes, the limit of rent should have been fixed as high as \$26 a year in rural areas, which brought persons of a much higher social status. Committee he proposed to move an amendment to reduce the rental in rural areas. The Bill was read a second time. On Wednesday the was read a second time. On Wednesday the measure passed through Committee and all the measure passed through Committee and all the remaining stages. In Committee several Government amendments were agreed to on Clause 1. Viscount Midleton mayed an amendment which Earl Sr. Aldwyn had put down to Clause 2 providing that in rural sanitary districts the Bill should apply to house up to the value of £12 instead of £26 a year. He argued that in rural districts the figure at present in the Bul would not be consistent with the intentions of and promoters of the measure. The Marquis of Landouna institut the rental limit in the and promoters of the mersure. The Marquis of Lansdowne justified the rental limit in the Bill on the ground that there were many areas to which the Bill must apply which, whilst tech-nically rural, were really urban in character It seemed better on the whole to include a certain number of persons not strictly entitled to protection than to execude some who had claims upon the relief given by the Bill. During the discussion Earl St. Aldwyn came into the House and said that he recognised the difficulties of the position, and therefore withdrew the amend-mant. The ones is The measure received the Royal Assent on Thursday.

DETERIORATION IN GAS.-Dr. Add son. Secretary to the Ministry of Munitions, replying in the Parliamentary Papers to Mr. W. Thorne's inquiry whether the Minister of Munitions was aware that the loss in the illuminating and heat ing power of gas caused by beazed, toland, and xylol being extracted could be made good to: Ayior being extracted could be made good to; the use of oil and cannet coal, says that the cost and difficulty of obtaining the materials required restrict the possibility of adopting the processes required, and the determination in the quality of the gas supplied to customers is hardly appreciable.

Mr. Frank Bailey Passmore, aged 70, of Alexandra House, West Cliff, Herne Bay, and of Suffolk House, Laurence Pointney Hill, E.C., civil engineer, left not personality £14,230 and gross £14,230.

At the last meeting of the Wolverhampton Town Council Mr. Charles Owen Silvers, Wolverhampton was appointed general man-ager and engineer of the Wolverhampton Cor-poration Tramways, in succession to the late Mr. W. A. Luutley, at a commencing salary of £350 per annum.

Fires in Dundee during the past year can damage to the extent of almost £50,000. The fire brigade received 207 calls during the year fire brigade received and the damage at which the outbreaks reaches \$10 and over amounted to £48,715 while the attended at outbreaks in the county at which the damages were estimated at £5.150. The most serious outbreaks occurred at the harbour; indeed, the total damage done by fires at the riverside amounted to £37.635.

A cross has been presented to Bordes Par Church, East Suffolk, and dedicated by the Bishop of St. Asaph. It is inscribed; "Given by the officers and non-commission d officers and men of the Shropshire R.H.A. Denbigh Hussars Veomany, Headquarter Staff, Signal Troop, R.A.M.C., and A.S.C., of the 1st Welsh Border Mounted Brigade, who were quartered at Beccles during the European War, 1914-1915. is three feet high, in the English style of 1480-1520, and consists of an enriched Latin cross, supported on a plain hexagonal and stem. At the end of each of the four arms is an embossed silver plaque worked into the symbols of the four evangelists, and in the centre of the cross is a fifth silver plaque of the Lamb with the banner of the Resurrection.

### TO CORRESPONDENTS:

We do not hold ourselves responsible for the opinioas of our correspondents. All communications should be drawn up as briefly as possible, as there are many claimants upon the space allotted to espondents

It is particularly requested that all drawings and all communications respecting illustrations or literary matter, books for review, etc., should be addressed to the Editor of the Building News, Effingham House, I, Arundel Street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' risks, and the Editor will not undertake to pay for, or be liable for, unsought contributions.

"Drawings of selected competition designs, important public and private buildings, details of old and new work, and good sketches are always well-come, and for such no charge is made for insertion of more commonplace subjects, small churches, chapels, houses, etc.—we have usually far more sent than we can insert, but are glad to do so when space permits, on mutually advantageous terms, which may be ascertained on application. It is particularly requested that all drawings

When favouring is with drawings or photographs, architects are asked kindly to state how long the building has been creeted. It does neither them nor as much good to din-trate buildings which have been some time executed, except under special circum stances.

Sa in Cavine-to Methodist Chapel at PwPholi, with a was burned down some months since by the normber y, has been rebuilt at a once by me need by y, has been rebuilt at a cost of £0, and was respected last week. We R. Leyd Jones of Camaryon, was the first town of Dolydd, the architect, and M. Evan Jones, of Dolydd, the

The Sandenan Memorial Halls, birth in Added Court High Street, Edinburgh, behind the Moore Knox Courch, have been formally opened. The architects were Messry, J. N. opened The architects were Messrs, J. Scott and Lone Campbell, F.R.L.B.A. Castle Street, Edinburgh, and the cost £12.600

At a meeting on Monday of St. Helen's District Commit. Isle of Wight, a letter was read from the scaverging contractor, terminating his contract at the end of the year on the ground that he was put to such great expense in boying poison to keep down the rats that it was not worth doing.

The foundation stone of a new church at New Rossington, near Doneaster, has been formally laid. Lind has been reserved for a torurally land. Land has been reserved for a parsonage house, and church institute. The plans of the church are by Lieutenant F. N. D. Masters, M. V., L.R.I.B.A., of Bank Chambers, Doneaster, and the cost will be £3,250.

The city conneil of Wakefield are seeking powers to modify then waterworks scheme. Under the new proposal, two comparatively small dams and gauge basins will be substituted for the Both Dean Reservoir originally contemplated, at an estimated cost of £20,000 as against £50,600 for the original project.

At the last meeting of the urban district council for Heanor, the proposal to build a school for the teaching of technical engineering was again under consideration, and resolved there the Heamor Education Committee testived near the Deanor Education Committee by requested to submit plans for the creetion of an engineering workshop, and that the Derbyshire Education Committee be asked to consent to Mr. G. H. Widdows, F.R.L.B.A., making the plans.

The death has occurred at Jarrow of Mr. Thomas Brown, aged 42 years, manager and surveyor for Mr. Thomas Lumsden, contractor, surveyor for Mr. Thomas Lumsden, contractor, Jarrow. Mr. Brown had been in the service of the firm for twenty-four years, and until a few days ago was fellowing his employment. The cause of death was menumona. The day row mays ago was rehowing ins employment. The cause of death was innouncement. The decreased was the second son of Mr. George Brown, traffic manager for Messis. Bowes and Partners. Mr. Brown was actively associated with many England, including contracts in the North of England, including the Pelaw Cooperative Stores and the extension of the Armstrong Col-lege. He was an artifete, and in later years was secretary and afterwards captain of the Jarrow Golf Club.

Mr. William Henry Lyon, R.H.A., of Inn-yard, near Fethard, Co. Wexford, and of Bel-fast, late of the Queen's University, Dublin, and of Belfast Cathedra', and President of fast, late of the Queen's University, Publim, and of Bo'fast Cithecha' and President of the Royal Institute of Arenteets of Ire'and, 1335 to 1739, who shed at September 12, aged 35, son of Leintenair Henry Lynn, R.X., left personal estate in the United Kingdom valued at £53,504. He cft £5,009 London and North Western Rankay ordinary stock for the completion of St. Ann's Cathedral Church, Belfast £5,000 Belfast Harbour Consolidated stock fast: £3,000 Belfast Harbour Consolidated stock thas: \$25,000 Reliast Harbour Consolidated stock to the Royal Victoria Hospital for the endowment of beds there, and \$2500 Relfast Harbour Consolidated stock for the Sustenation Fund of the Parish of Fethard, if the residue of his estate shall exceed \$250,000, any balance above that som is left if a distribution ameng Belfast local charities.

Sir George Buchanan, M.Inst.C.E., chairman of the Rangoon Port Trust, who had charge of the great works recently completed on the Rangoon river, has been placed on special duty for dredging operations in Mesopotamia.

A stained-glass window has been erected in the parish church of Hinton St. George, by Earl Poulett, in memory of the late Mr. Charles Irish, whom a brass tablet describes as "the trusted and faithful Poulett family for 58 years."
